Note 2: Definition of angle and .

: Angle measured from normal to direction of observation.

: Azimuth angle measured counter-clockwise from X-axis.

Note 3 : Definition of Contrast ratio

The contrast ratio is defined to be the ratio of transmission or reflection of a symbol at its "on" and "off" state.

$$\text{Contrast ratio(K)} = \frac{\text{Transmission/Reflectance at "OFF" state}}{\text{Transmission/Reflectance at "ON" state}}$$

Note 4 : Definition of response time

At specific operating voltage and temperature, the times measured by observing contrast or transmission ratio.

# AQM1264J-FL-YBW GRAPHIC MODULE VER1.0

Delay time  $t_0$  : Measured between zero and 10% with  $V_{on}$ .

Rise time  $t_r$  : Measured between 10% and 90% of LCD segment maximum response with  $V_{on}$

Decay time  $t_d$  : With voltage switches to zero and the instant LCD segment reaches 10% of its maximum response

$T_{on}$  : Time measured between the instant operating voltage is applied to display and the instant the display reaches 90% of its maximum response.

$T_{off}$  : Time measured between the instant operating voltage switches to zero and the instant the display reaches 10% of its maximum response.

## LIQUID CRYSTAL PANEL LIFE TIME

50000 hours minimum at  $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$  and 65% RH maximum.

Note: Definition of life time : the time up to occurrence of any of the following:

Contrast reduces to 30% of the initial value.

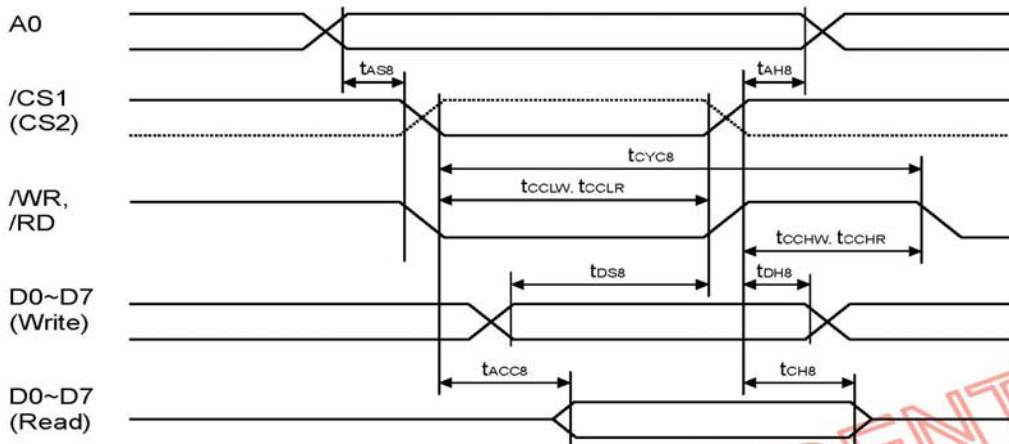

Current consumption becomes three times the initial value.

Orientation deteriorates significantly.
