TSP4264

5V/150mA Fixed-Voltage Ultra Low LDO

SOT-223

Pin Definition:
1. Input
2. Ground (tab)
3. Output

General Description

TSP4264 is a 5V low-drop fixed-voltage regulator in an SOT-223 package. The IC regulates an input voltage in the range of 5.5V<V_{IN}<45V to V_{OUT} (rated) = 5.0V. The maximum output current is more than 150mA. This IC is designed with short circuit-proof and features temperature protection that disables the circuit at over-temperature.

Features

- Fixed Output Voltage 5V
- Output Voltage Tolerance ±2%
- 150mA Current Capability
- Ultra Low Dropout Voltage
- Over Temperature Protection
- Very Low Current Consumption 400uA (max.)
- Short-Circuit Proof
- Reverse Polarity Proof
- Wide Temperature Polarity Range
- Suitable for use in Automotive Electronics
- AEC-Q100 Qualified

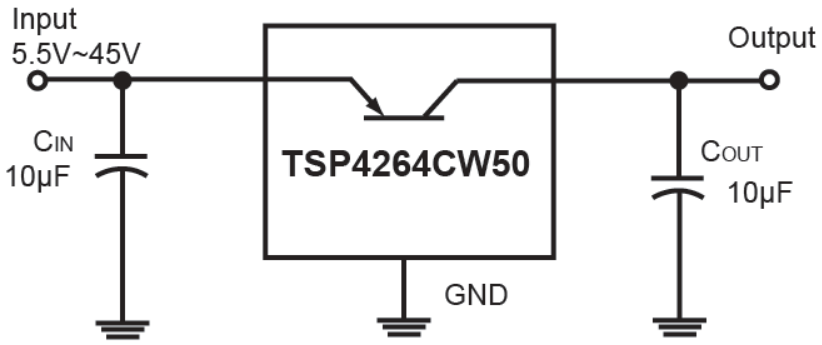
Note: Dropout voltage = V_{IN} – V_{OUT}
(Measured where V_{OUT} has dropped 100mV from the nominal value obtained at V_{IN} = 13.5V)

Typical Application Circuit



Application Information

Dimensioning Information on External Components

The input capacitor C_{IN} is necessary for compensating line influences. Using a resistor of approx. 1Ω in series with C_{IN}, the oscillating of input inductivity and input capacitance can be clamped. The output capacitor C_{OUT} is necessary for the stability of the regulating circuit. Stability is guaranteed at values C_{OUT} ≥10uF and an ESR ≤ 10Ω within the operating temperature range.

Circuit Description

The control amplifier compares a reference voltage, which is kept highly precise by resistance adjustment, to a voltage that is proportional to the output voltage and drives the base of the series transistor via a buffer. Saturation control, working as a function of load current, prevents any over-saturation of the power element. The IC is additionally protected against overload, over temperature and reverse polarity
