

256MB Unbuffered SDRAM DIMM

HB52E328EM-A6B, -B6B (32M words × 64 bits, 1 bank)
HB52E329EM-A6B, -B6B (32M words × 72 bits, 1 bank)

Description

The HB52E328EM and HB52E329EM belong to 8-byte DIMM (Dual In-line Memory Module) family, and have been developed as an optimized main memory solution for 8-byte processor applications. They are synchronous Dynamic RAM Module, mounted 256M bits SDRAMs (HM5225805BTT) sealed in TSOP package, and 1 piece of serial EEPROM (2k bits) for Presence Detect (PD). The HB52E328EM is organized 32M × 64 × 1 bank mounted 8 pieces of 256M bits SDRAM. The HB52E329EM is organized 32M × 72 × 1 bank mounted 9 pieces of 256M bits SDRAM.

Therefore, they make high density mounting possible without surface mount technology. They provide common data inputs and outputs. Decoupling capacitors are mounted beside each TSOP on the module board.

Features

- Fully compatible with: JEDEC standard outline 8-byte DIMM
- 168-pin socket type package (dual lead out)
 - Outline: 133.37mm (Length) × 34.925mm (Height) × 4.00mm (Thickness)
 - Lead pitch: 1.27mm
- 3.3V power supply
- Clock frequency: 100MHz (max.)
- LVTTTL interface
- Data bus width : × 64 Non parity (HB52E328EM)
 : × 72 ECC (HB52E329EM)
- Single pulsed /RAS
- 4 Banks can operates simultaneously and independently
- Burst read/write operation and burst read/single write operation capability
- Programmable burst length (BL): 1, 2, 4, 8
- 2 variations of burst sequence
 - Sequential
 - Interleave
- Programmable /CE latency (CL)
 - : 2, 3 (HB52E328EM/329EM-A6B)
 - : 3 (HB52E328EM/329EM-B6B)

- Byte control by DQMB
- Refresh cycles: 8192 refresh cycles/64ms
- 2 variations of refresh
 - Auto refresh
 - Self refresh

Pin Description

[HB52E328EM]

Pin name	Function
A0 to A12	Address input — Row address A0 to A12 — Column address A0 to A9
BA0, BA1	Bank select address
DQ0 to DQ63	Data input/output
/S0, /S2	Chip select input
/RE	Row enable (/RAS) input
/CE	Column enable (/CAS) input
/W	Write enable input
DQMB0 to DQMB7	Byte data mask
CK0, CK2	Clock input
CKE0	Clock enable input
WP	Write protect for serial PD
SDA	Data input/output for serial PD
SCL	Clock input for serial PD
SA0 to SA2	Serial address input
VCC	Primary positive power supply
VSS	Ground
NC	No connection

[HB52E329EM]

Pin name	Function
A0 to A12	Address input — Row address A0 to A12 — Column address A0 to A9
BA0, BA1	Bank select address
DQ0 to DQ63	Data input/output
CB0 to CB7	Check bit (Data input/output)
/S0, /S2	Chip select input
/RE	Row enable (/RAS) input
/CE	Column enable (/CAS) input
/W	Write enable input
DQMB0 to DQMB7	Byte data mask
CK0, CK2	Clock input
CKE0	Clock enable input
WP	Write protect for serial PD
SDA	Data input/output for serial PD
SCL	Clock input for serial PD
SA0 to SA2	Serial address input
VCC	Primary positive power supply
VSS	Ground
NC	No connection

	(-B6B)	1	0	1	0	1	1	0	1	AD	CL = 3

- Notes: 1. All serial PD data are not protected. 0: Serial data, “driven Low”, 1: Serial data, “driven High” These SPD are based on Intel specification (Rev.1.2A).
2. Regarding byte32 to 35, based on JEDEC Committee Ballot JC42.5-97-119.
3. Byte72 is manufacturing location code. (ex: In case of Japan, byte72 is 4AH. 4AH shows “J” on ASCII code.)
4. Regarding byte93 and 94, based on JEDEC Committee Ballot JC42.5-97-135. BCD is “Binary Coded Decimal”.
5. All bits of 99 through 125 are not defined (“1” or “0”).
6. Bytes 95 through 98 are assembly serial number.

Block Diagram (HB52E328EM)

- Notes :
1. The SDA pull-up resistor is required due to the open-drain/open-collector output.
 2. The SCL pull-up resistor is recommended because of the normal SCL line inactive "high" state.

* D0 to D7: HM5225805
 U0: 2k bits EEPROM
 C0 to C7: 0.33 μ F
 C8 to C15: 0.10 μ F
 C100, C101: 10pF
 N0 to N17: Network resistor 10 Ω
 R100 to R103: 10 Ω
 R1: 47k Ω

Block Diagram (HB52E329EM)

- Notes:
1. The SDA pull-up resistor is required due to the open-drain/open-collector output.
 2. The SCL pull-up resistor is recommended because of the normal SCL line inactive "high" state.

* D0 to D8: HM5225805

 C0 to C9: 0.33µF, C10 to C19: 0.10µF
 C100, C101: 10pF
 R1: 47kΩ
 N0 to N17: Network register 10Ω
 R100 to R103: 10Ω

Electrical Specifications

Absolute Maximum Ratings

Parameter	Symbol	Value	Unit	Note
Voltage on any pin relative to VSS	VT	-0.5 to VCC + 0.5 (≤ 4.6 (max.))	V	1
Supply voltage relative to VSS	VCC	-0.5 to +4.6	V	1
Short circuit output current	IOUT	50	mA	
Power dissipation (HB52E328EM)	PT	8.0	W	
Power dissipation (HB52E329EM)	PT	9.0	W	
Operating temperature	Topr	0 to +65	°C	
Storage temperature	Tstg	-55 to +125	°C	

Notes: 1. Respect to VSS.

DC Operating Conditions (TA = 0 to +65°C)

Parameter	Symbol	min.	max.	Unit	Note
Supply voltage	VCC	3.0	3.6	V	1, 2
	VSS	0	0	V	3
Input high voltage	VIH	2.0	VCC + 0.3	V	1, 4
Input low voltage	VIL	-0.3	0.8	V	1, 5

Notes: 1. All voltage referred to VSS

2. The supply voltage with all VCC pins must be on the same level.
3. The supply voltage with all VSS pins must be on the same level.
4. VIH (max.) = VCC + 2.0V for pulse width ≤ 3 ns at VCC.
5. VIL (min.) = VSS - 2.0V for pulse width ≤ 3 ns at VSS.

DC Characteristics (TA = 0 to 65°C, VCC = 3.3V ± 0.3V, VSS = 0V)

Active standby current in non power down	ICC3N		240	270	mA	CKE, /S = VIH, tCK = 12ns	1, 2, 4
Burst operating current (CL = 2)	ICC4		800	900	mA	tCK = min., BL = 4	1, 2, 5
	(CL = 3)	ICC4	800	900	mA		
Refresh current	ICC5		1760	1980	mA	tRC = min.	3
Self refresh current	ICC6		24	27	mA	VIH ≥ VCC – 0.2 V VIL ≤ 0.2 V	8

- Notes: 1. ICC depends on output load condition when the device is selected. ICC (max.) is specified at the output open condition.
2. One bank operation.
 3. Input signals are changed once per one clock.
 4. Input signals are changed once per two clocks.
 5. Input signals are changed once per four clocks.
 6. After power down mode, CK operating current.
 7. After power down mode, no CK operating current.
 8. After self refresh mode set, self refresh current.

DC Characteristics2 (TA = 0 to 65°C, VCC = 3.3V ± 0.3V, VSS = 0V)

Parameter	Symbol	min.	max.	Unit	Test condition	Notes
Input leakage current	ILI	-10	10	μA	0 ≤ VIN ≤ VCC	
Output leakage current	ILO	-10	10	μA	0 ≤ VOUT ≤ VCC DQ = disable	
Output high voltage	VOH	2.4	—	V	IOH = -4mA	
Output low voltage	VOL	—	0.4	V	IOL = 4mA	

Pin Capacitance (TA = 25°C, VCC = 3.3V ± 0.3V) (HB52E328EM)

Parameter	Symbol	Pin	max.	Unit	Notes
Input capacitance	CI1	Address	70	pF	1, 2, 4
	CI2	/RE, /CE, /W	63	pF	1, 2, 4
	CI3	CKE	68	pF	1, 2, 4
	CI4	/S	34	pF	1, 2, 4
	CI5	CK	50	pF	1, 2, 4
	CI6	DQMB	16	pF	1, 2, 4
Input/Output capacitance	CI/O1	DQ	14	pF	1, 2, 3, 4

Pin Capacitance (TA = 25°C, VCC = 3.3V ± 0.3V) (HB52E329EM)

Parameter	Symbol	Pin	max.	Unit	Notes
Input capacitance	CI1	Address	72	pF	1, 2, 4
	CI2	/RE, /CE, /W	66	pF	1, 2, 4
	CI3	CKE	70	pF	1, 2, 4
	CI4	/S	39	pF	1, 2, 4
	CI5	CK	50	pF	1, 2, 4
	CI6	DQMB	21	pF	1, 2, 4
Input/Output capacitance	CI/O1	DQ	14	pF	1, 2, 3, 4

Notes: 1. Capacitance measured with Boonton Meter or effective capacitance measuring method.

2. Measurement condition: f = 1MHz, 1.4Vbias, 200mV swing.
3. DQMB = VIH to disable Data-out.
4. This parameter is sampled and not 100% tested.

AC Characteristics (TA = 0 to 65°C, VCC = 3.3V ± 0.3V, VSS = 0V)

Parameter	Symbol	PC100 Symbol	min.	max.	Unit	Notes
System clock cycle time (CL = 2)	tCK	Tclk	10	—	ns	1
(CL = 3)	tCK	Tclk	10	—	ns	
CK high pulse width	tCKH	Tch	3	—	ns	1
CK low pulse width	tCKL	Tcl	3	—	ns	1
Access time from CK (CL = 2)	tAC	Tac	—	6	ns	1, 2
(CL = 3)	tAC	Tac	—	6	ns	
Data-out hold time	tOH	Toh	3	—	ns	1, 2
CK to Data-out low impedance	tLZ		2	—	ns	1, 2, 3
CK to Data-out high impedance	tHZ		—	6	ns	1, 4
Data-in setup time	tDS	Tsi	2	—	ns	1
Data in hold time	tDH	Thi	1	—	ns	1
Address setup time	tAS	Tsi	2	—	ns	1
Address hold time	tAH	Thi	1	—	ns	1
CKE setup time	tCES	Tsi	2	—	ns	1, 5
CKE setup time for power down exit	tCESP	Tpde	2	—	ns	1
CKE hold time	tCEH	Thi	1	—	ns	1
Command setup time	tCS	Tsi	2	—	ns	1
Command hold time	tCH	Thi	1	—	ns	1
Ref/Active to Ref/Active command period	tRC	Trc	70	—	ns	1
Active to precharge command period	tRAS	Tras	50	120000	ns	1
Active command to column command (same bank)	tRCD	Trcd	20	—	ns	1
Precharge to active command period	tRP	Trp	20	—	ns	1
Write recovery or data-in to precharge lead time	tDPL	Tdpl	20	—	ns	1
Active (a) to Active (b) command period	tRRD	Trrd	20	—	ns	1
Transition time (rise and fall)	tT		1	5	ns	
Refresh period	tREF		—	64	ms	

- Notes: 1. AC measurement assumes $t_T = 1\text{ns}$. Reference level for timing of input signals is 1.5V.
 2. Access time is measured at 1.5V. Load condition is $C_L = 50\text{pF}$.
 3. tLZ (min.) defines the time at which the outputs achieves the low impedance state.
 4. tHZ (max.) defines the time at which the outputs achieves the high impedance state.
 5. tCES defines CKE setup time to CK rising edge except power down exit command.

Test Conditions

- Input and output timing reference levels: 1.5V
- Input waveform and output load: See following figures

Relationship Between Frequency and Minimum Latency

Parameter

Frequency (MHz)			100	
tCK (ns)	Symbol	PC100 Symbol	10	Notes
Active command to column command (same bank)	IRCD		2	1
Active command to active command (same bank)	IRC		7	= [IRAS + IRP] 1
Active command to precharge command (same bank)	IRAS		5	1
Precharge command to active command (same bank)	IRP		2	1
Write recovery or data-in to precharge command (same bank)	IDPL	Tdpl	2	1
Active command to active command (different bank)	IRRD		2	1
Self refresh exit time	ISREX	Tsrx	1	2
Last data in to active command (Auto precharge, same bank)	IAPW	Tdal	4	= [IDPL + IRP]
Self refresh exit to command input	ISEC		7	= [IRC] 3
Precharge command to high impedance (CL = 2)	IHZP	Troh	2	
(CL = 3)	IHZP	Troh	3	
Last data out to active command (Auto precharge, same bank)	IAPR		1	
Last data out to precharge (early precharge) (CL = 2)	IEP		-1	
(CL = 3)	IEP		-2	
Column command to column command	ICCD	Tccd	1	
Write command to data in latency	IWCD	Tdwd	0	
DQMB to data in	IDID	Tdqm	0	
DQMB to data out	IDOD	Tdqz	2	
CKE to CK disable	ICLE	Tcke	1	
Register set to active command	IRSA	Tmrd	1	
/S to command disable	ICDD		0	
Power down exit to command input	IPEC		1	

Notes: 1. IRCD to IRRD are recommended value.

2. Be valid [DESL] or [NOP] at next command of self refresh exit.
3. Except [DESL] and [NOP]

Pin Functions

CK0, CK2 (input pin): CK is the master clock input to this pin. The other input signals are referred at CK rising edge.

/S0, /S2 (input pin): When /S is Low, the command input cycle becomes valid. When /S is High, all inputs are ignored. However, internal operations (bank active, burst operations, etc.) are held.

/RE, /CE and /W (input pins): Although these pin names are the same as those of conventional DRAMs, they function in a different way. These pins define operation commands (read, write, etc.) depending on the combination of their voltage levels. For details, refer to the command operation section.

A0 to A12 (input pins): Row address (AX0 to AX12) is determined by A0 to A12 level at the bank active command cycle CK rising edge. Column address (AY0 to AY9) is determined by A0 to A9 level at the read or write command cycle CK rising edge. And this column address becomes burst access start address. A10 defines the precharge mode. When A10 = High at the precharge command cycle, all banks are precharged. But when A10 = Low at the precharge command cycle, only the bank that is selected by BA0, BA1 (BA) is precharged.

BA0, BA1 (input pin): BA0, BA1 are bank select signal (BA). The memory array is divided into bank 0, bank 1, bank 2 and bank 3. If BA1 is Low and BA0 is Low, bank 0 is selected. If BA1 is High and BA0 is Low, bank 1 is selected. If BA1 is Low and BA0 is High, bank 2 is selected. If BA1 is High and BA0 is High, bank 3 is selected.

CKE0 (input pin): This pin determines whether or not the next CK is valid. If CKE is High, the next CK rising edge is valid. If CKE is Low, the next CK rising edge is invalid. This pin is used for power-down and clock suspend modes.

DQMB0 to DQMB7 (input pins): Read operation: If DQMB is High, the output buffer becomes High-Z. If the DQMB is Low, the output buffer becomes Low-Z.

Write operation: If DQMB is High, the previous data is held (the new data is not written). If DQMB is Low, the data is written.

DQ0 to DQ63, CB0 to CB7 (input/output pins): Data is input to and output from these pins.

VCC (power supply pins): 3.3V is applied.

VSS (power supply pins): Ground is connected.

Detailed Operation Part

Refer to the HM5225165B/HM5225805B/HM5225405B-75/A6/B6 datasheet (E0082H).

Physical Outline

Note: Tolerance on all dimensions ± 0.15/0.006 unless otherwise specified.

NOTES FOR CMOS DEVICES**① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS**

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

CAUTION FOR HANDLING MEMORY MODULES

When handling or inserting memory modules, be sure not to touch any components on the modules, such as the memory IC, chip capacitors and chip resistors. It is necessary to avoid undue mechanical stress on these components to prevent damaging them.

When re-packing memory modules, be sure the modules are NOT touching each other. Modules in contact with other modules may cause excessive mechanical stress, which may damage the modules.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of Elpida Memory, Inc.

Elpida Memory, Inc. does not assume any liability for infringement of any intellectual property rights (including but not limited to patents, copyrights, and circuit layout licenses) of Elpida Memory, Inc. or third parties by or arising from the use of the products or information listed in this document. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of Elpida Memory, Inc. or others.

Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of the customer's equipment shall be done under the full responsibility of the customer. Elpida Memory, Inc. assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.

[Product applications]

Elpida Memory, Inc. makes every attempt to ensure that its products are of high quality and reliability. However, users are instructed to contact Elpida Memory's sales office before using the product in aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment, medical equipment for life support, or other such application in which especially high quality and reliability is demanded or where its failure or malfunction may directly threaten human life or cause risk of bodily injury.

[Product usage]

Design your application so that the product is used within the ranges and conditions guaranteed by Elpida Memory, Inc., including the maximum ratings, operating supply voltage range, heat radiation characteristics, installation conditions and other related characteristics. Elpida Memory, Inc. bears no responsibility for failure or damage when the product is used beyond the guaranteed ranges and conditions. Even within the guaranteed ranges and conditions, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Elpida Memory, Inc. products does not cause bodily injury, fire or other consequential damage due to the operation of the Elpida Memory, Inc. product.

[Usage environment]

This product is not designed to be resistant to electromagnetic waves or radiation. This product must be used in a non-condensing environment.

If you export the products or technology described in this document that are controlled by the Foreign Exchange and Foreign Trade Law of Japan, you must follow the necessary procedures in accordance with the relevant laws and regulations of Japan. Also, if you export products/technology controlled by U.S. export control regulations, or another country's export control laws or regulations, you must follow the necessary procedures in accordance with such laws or regulations.

If these products/technology are sold, leased, or transferred to a third party, or a third party is granted license to use these products, that third party must be made aware that they are responsible for compliance with the relevant laws and regulations.
