# LVD SCSI Terminator

- Ultra2/3 SCSI
- 9 Channels
- Eliminates External V<sub>REF</sub> Capacitor

The IMP5245/5246 ICs are Low Voltage Differential (LVD) terminators designed to comply with the LVD termination specification in the SPI-2 document. The IMP5245/5246 are designed specifically for LVD applications. Because the IMP5245/5246 support only LVD, they have lower output capacitance than multimode terminators.

The IMP5245/5246 deliver the ultimate in SCSI bus performance while saving component cost and board area. Elimination of the external capacitors also mitigates the need for a lengthy capacitor selection process. The individual high bandwidth drivers also maximize channel separation and reduces channel-to-channel noise and cross talk. The high-bandwidth architecture insures ULTRA-2 performance, while providing a clear migration path to ULTRA-3 and beyond.

When the IMP5245/5246 are enabled, the differential sense (DIFF-SENSE) pin supplies a voltage between 1.2V and 1.4V. The terminator DIFFSENSE output is connected to the system DIFFSENSE line. If there are no single ended or HVD devices attached to the system the LVD output will be enabled. If the DIFFSENSE line is LOW, indicating a single ended device, the IMP5245/5246 output will be in a high-impedance state. If the DIFFSENSE line is HIGH, indicating a high

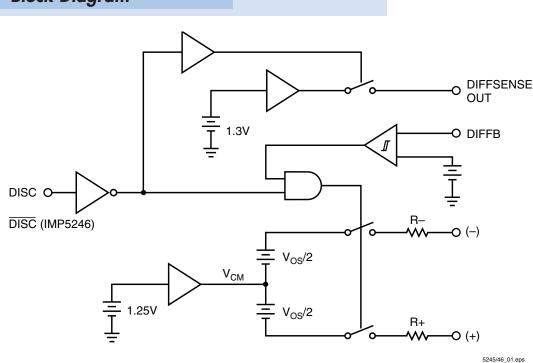

#### **Block Diagram**

#### **Key Features**

- ◆ 2.5pF typical disabled output capacitance
- Fast response
- No external V<sub>REF</sub> capacitors required
- 5µA supply current in disconnect mode
- 20mA supply current during normal operation
- Logic command disconnects all termination lines
- Diffsense line driver
- Current limit and thermal protection
- Compatible with the pending SPI-2 LVD specification
- Pin compatible to the UCC5640

voltage differential device, the IMP5245/5246 output will also be in a high-impedance state.

The IMP5245/5246 ICs have a TTL compatible disconnect pin. The IMP5245 is active LOW and the IMP5246 is active HIGH. During sleep mode, power supply current is reduced to just  $5\mu$ A. During sleep mode all outputs are in a high-impedance state. Also during sleep mode, the DIFFSENSE function is disabled and is placed in a high-impedance state.

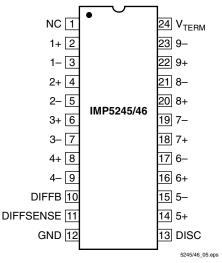

#### **Pin Configuration**

#### TSSOP Package

#### **Ordering Information**

Part Number	Temperature Range	Package
IMP5245CPW	0°C to 70°C	24-Pin Plastic TSSOP
IMP5246CPW	0°C to 70°C	24-Pin Plastic TSSOP

#### Absolute Maximum Ratings<sup>1</sup>

TermPwr Voltage+6.5V
Signal Line Voltage
Differential Voltage
Operating Junction Temperature
Plastic (PW Package)150°C

#### Thermal Data

**PW Package:** 

Thermal Resistance Junction-to-Ambient,  $\theta_{JA}$  ..... 100°C/W

Junction Temperature Calculation:  $T_J = T_A + (P_D \ x \ \theta_{JA})$ . The  $\theta_{JA}$  numbers are guidelines for the thermal performance of the device/pc-board system. No ambient airflow is assumed. Storage Temperature Range .....-65°C to 150°C Lead Temperature (Soldering, 10 sec.) ...... 300°C

Note: 1. Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.

### **Recommended Operating Conditions**

Parameter	Symbol	Min	Тур	Max	Units
Termpwr Voltage	V <sub>TERM</sub>	3.0		5.25	V
Signal Line Voltage		0		5.0	V
Disconnect Input Voltage		0		V <sub>TERM</sub>	V
Operating Junction Temperature Range — IMP5245/5246		0		70	°C

Note: 2. Range over which the device is functional.

#### **Electrical Characteristics**

Unless otherwise specified, these specifications apply over the operating ambient temperature range of  $0^{\circ}C \le T_A \le 70^{\circ}C$ . TermPwr = 3.3V, DISCONNECT: IMP5245 = LOW, IMP5246 = HIGH. Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.

Parameter	Symbol	ool Conditions		Тур	Max	Units
LVD Terminator Section		· · · · · · · · · · · · · · · · · · ·				
TermPwr Supply Current		All term lines = Open		20	25	mA
Power Down Mode		DISCONNECT: IMP5245 = HIGH, IMP5246 = LOW		5	10	μΑ
Common Mode Voltage	V <sub>OM</sub>			1.25	1.375	V
Offset Voltage	V <sub>OS</sub>	Open circuit between – and + (see Note 3)		112	125	mV
Differential Terminator Impedance		$V_{OD} = -1V$ to 1V	100	105	110	Ω
Common Mode Impedance			100	200	300	Ω
Output Capacitance	tput Capacitance DISCONNECT: IMP5245 = HIGH, IMP5246 = LOV			2.5		pF
Output Leakage		DISCONNECT: IMP5245 = HIGH, IMP5246 = LOW, V <sub>LINE</sub> = 0 to 4V, $T_A = 25^{\circ}C$		0	2	μA
		DISCONNECT: IMP5245 = HIGH, IMP5246 = LOW, $V_{\text{TERM}} = 0V, V_{\text{LINE}} = 2.7V$		1		μΑ
Mode Change Delay		DIFFSENSE = 1.4V to 0V	100	150		ms
DIFFSENSE Section		· · · · · · · · · · · · · · · · · · ·				
DIFFSENSE Output Voltage			1.2	1.3	1.4	V
DIFFSENSE Output Source Current		DIFFSENSE = 0V	5.0		15.0	mA
DIFFSENSE Sink Current		V <sub>IN</sub> = 2.75V			200	μA
DIFFSENSE Output Leakage		DISCONNECT: IMP5245 = HIGH, IMP5246 = LOW, $T_A = 25^{\circ}C$			10	μΑ
DISCONNECT Section						
DISCONNECT Threshold			0.8		2.0	V
Input Current		DISCONNECT: IMP5245 = 0V			10	μA
		DISCONNECT: IMP5246 = 3.3V			10	μA

*Note:* 3. *Open circuit failsafe voltage.* 

## Application Information

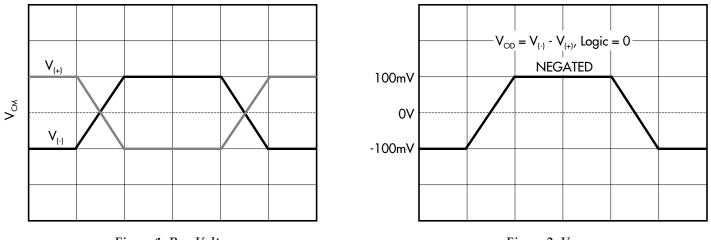

Figure 1. Bus Voltage
