

## Dual Output, High Efficiency, Isolated DC/DC Converter

*The DQ63325QGL09 DualQor™ series is an independently regulated dual output converter that uses the industry standard quarter brick package size. The very high efficiency is a result of SynQor's patented topology that uses synchronous rectification and an innovative construction design to minimize heat dissipation and allow extremely high power densities. The power dissipated by the converter is so low that a heatsink is not required, which saves cost, weight, height, and application effort. All of the power and control components are mounted to the multi-layer PCB substrate with high-yield surface mount technology, resulting in a more reliable product.*

**DualQor**  
Dual Output

DQ63325QGL09 Module

### Operational Features

- Independently regulated outputs (separate control loops)
- High efficiency, >88% at full rated load current
- Delivers up to 87 Watts of output power with minimal derating - no heatsink required
- Wide input voltage range: 35V – 75V, with 100V 100ms input voltage transient withstand
- Fixed frequency switching provides predictable EMI performance
- No minimum load requirement means no preload resistors required

### Mechanical Features

- Industry standard pin-out configuration
- Industry standard size: 1.45" x 2.3"
- Low profile of only 0.34", permits better airflow and smaller card pitch
- Total weight: 1.1 oz (31 g), lower mass reduces vibration and shock problems

### Control Features

- On/Off control referenced to input side (positive and negative logic options are available)
- Output voltage trim: +10%/-10%, permits custom voltages and voltage margining. Optional second trim pin allows independent trimming.

### Protection Features

- Input under-voltage lockout disables converter at low input voltage conditions
- Output current limit and short circuit protection protects converter from excessive load current or short circuits
- Output over-voltage protection protects load from damaging voltages
- Thermal shutdown protects converter from abnormal environmental conditions

### Safety Features

- 2000V, 30 MΩ input-to-output isolation provides input/output ground separation
- UL/cUL 60950 recognized (US & Canada), basic insulation rating
- TUV certified to EN60950
- Meets 72/23/EEC and 93/68/EEC directives which facilitates CE Marking in user's end product
- Board and plastic components meet UL94V-0 flammability requirements

### MECHANICAL DIAGRAM

### Side View

### NOTES

- 1) All pins are 0.040" (1.02mm) diameter with 0.080" (2.03 mm) diameter standoff shoulders.
- 2) Other pin extension lengths available. Recommended pin length is 0.03" (0.76mm) greater than the PCB thickness.
- 3) All Pins: Material - Copper Alloy  
Finish - Tin/Lead over Nickel plate
- 4) Undimensioned components are shown for visual reference only.
- 5) All dimensions in inches (mm)  
Tolerances: x.xx +/-0.02 in. (x.x +/-0.5mm)  
x.xxx +/-0.010 in. (x.xx +/-0.25mm)
- 6) Weight: 1.1 oz. (31 g) typical
- 7) Workmanship: Meets or exceeds IPC-A-610C Class II
- 8) Modules can be ordered as QGA option that have different pins to provide a minimum bottom side clearance of 0.076" while increasing maximum height to 0.424". See ordering page for more information.

### PIN CONNECTIONS

Pin No.	Name	Function
1	Vin(+)	Positive input voltage
2	ON/OFF	TTL input to turn converter on and off, referenced to Vin(-), with internal pull up.
3	Vin(-)	Negative input voltage
4	2.5Vout(+)	2.5V positive output voltage
5	OP RTN	Output Return
A	<i>2nd TRIM</i>	<i>2nd Output voltage trim<sup>2</sup></i>
6	TRIM	Output voltage trim <sup>1</sup>
7	3.3Vout(+)	3.3V positive output voltage

*Pins in Italics Shaded text are Optional*

### NOTES

1. For Standard feature unit (S feature), one trim pin (pin 6) trims both outputs simultaneously by the same amount in the same direction.
2. For units with optional trim pin (T feature), the original trim pin (pin 6) trims the low voltage output and the optional trim pin (pin A) trims the high voltage output. Both trim independently of one other.

## STANDARDS COMPLIANCE

Parameter	Notes
<b>STANDARDS COMPLIANCE</b>	
UL/cUL 60950	File # E194341, Basic insulation & pollution degree 2
EN60950	Certified by TÜV
72/23/EEC	
93/68/EEC	
Needle Flame Test (IEC 695-2-2)	test on entire assembly; board & plastic components UL94V-0 compliant
IEC 61000-4-2	ESD test, 8kV - NP, 15kV air - NP
GR-1089-CORE	Section 7 - electrical safety, Section 9 - bonding/grounding
Telcordia (Bellcore) GR-513	

- An external input fuse must always be used to meet these safety requirements

## QUALIFICATION TESTING

Parameter	# Units	Test Conditions
<b>QUALIFICATION TESTING</b>		
Life Test	32	95% rated V <sub>in</sub> and load, units at derating point, 1000 hours
Vibration	5	10-55Hz sweep, 0.060" total excursion, 1 min./sweep, 120 sweeps for 3 axis
Mechanical Shock	5	100g minimum, 2 drops in x and y axis, 1 drop in z axis
Temperature Cycling	10	-40°C to 100°C, unit temp. ramp 15°C/min., 500 cycles
Power/Thermal Cycling	5	T <sub>operating</sub> = min to max, V <sub>in</sub> = min to max, full load, 100 cycles
Design Marginality	5	T <sub>min</sub> -10°C to T <sub>max</sub> +10°C, 5°C steps, V <sub>in</sub> = min to max, 0-105% load
Humidity	5	85°C, 85% RH, 1000 hours, 2 minutes on and 6 hours off
Solderability	15 pins	MIL-STD-883, method 2003

- Extensive characterization testing of all SynQor products and manufacturing processes is performed to ensure that we supply robust, reliable product. Contact factory for more information about Proof of Design and Proof of Manufacturing processes.

## OPTIONS

SynQor provides various options for Logic Sense, Pin Length and Feature Set for this family of DC/DC converters. Please consult the last page of this specification sheet for information on available options.

## PATENTS

SynQor is protected under various patents, including but not limited to U.S. Patent # 5,999,417.

## Performance Curves

Quarter Brick Dual 48V<sub>in</sub> 3.3/2.5V<sub>out</sub> 87W

Figure 1: Efficiency vs. output current, from half load to full load on each output voltage at minimum, nominal, and maximum input voltage at 25°C. Output not under test is held constant at half load.

Figure 2: Power dissipation vs. output current, from half load to full load on each output voltage at minimum, nominal, and maximum input voltage at 25°C. Output not under test is held constant at half load.

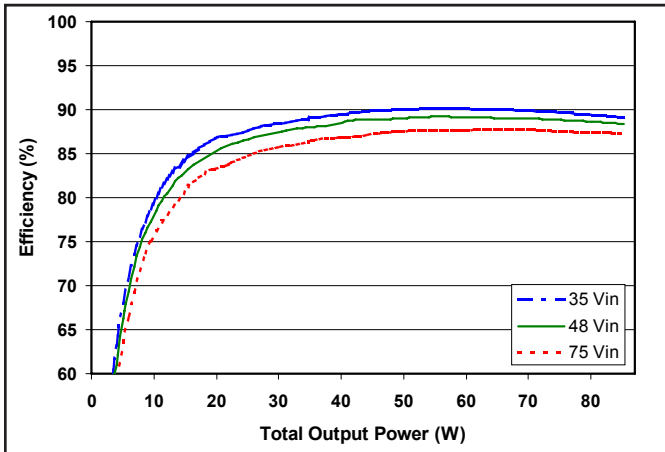

Figure 3: Overall converter efficiency vs. output power from zero load to full load at minimum, nominal, and maximum input voltage at 25°C. Both loads are equal and range from zero to full load.

Figure 4: Overall converter power dissipation vs. output power from zero load to full load at minimum, nominal, and maximum input voltage at 25°C. Both loads are equal and range from zero to full load.

Figure 5: Overall converter efficiency at nominal output voltages and 60% rated power on each output rail vs. airflow rate for ambient temperatures of 25°C, 40°C and 55°C (nominal input voltage).

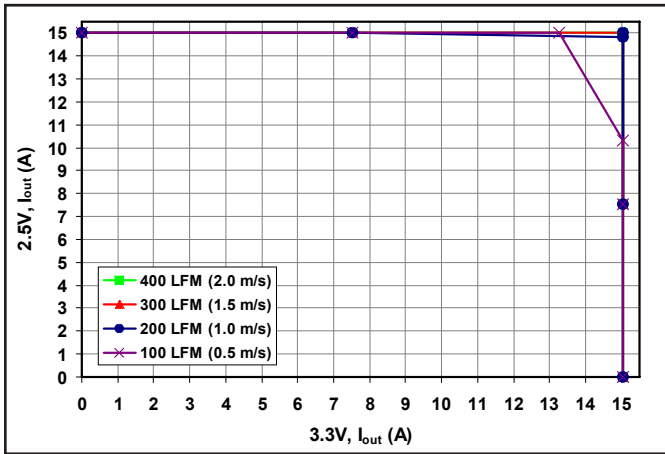

Figure 6: Overall converter power dissipation at nominal output voltages and 60% rated power on each output rail vs. airflow rate for ambient temperatures of 25°C, 40°C and 55°C (nominal input voltage).

### BASIC OPERATION AND FEATURES

The *DualQor* series converter uses a two-stage power circuit topology in which the two output voltages are cross regulated. The first stage is a buck-converter that keeps the output voltage constant over variations in line, load, and temperature. The second stage uses a transformer to provide the functions of input/output isolation and voltage step-down to achieve the low output voltage required.

The two-stage solution is ideal for converters with multiple cross-regulated output voltages. The first-stage compensates for any variations in line voltage. Therefore, the dependence of the output voltage on line variations is minimized.

Both the first stage and the second stage switch at a fixed frequency for predictable EMI performance. Rectification of the transformer's output is accomplished with synchronous rectifiers. These devices, which are MOSFETs with a very low on-state resistance, dissipate far less energy than Schottky diodes. This is the primary reason that the *DualQor* series of converters has such high efficiency, even at very low output voltages and very high output currents.

Dissipation throughout the converter is so low that it does not require a heatsink for operation. However, baseplated versions are available for optional heatsinking in severe thermal environments.

The *DualQor* series converter uses the industry standard footprint and pin-out configuration.

The *DualQor* has many standard control and protection features. All shutdown features are non-latching, meaning that the converter shuts off for 200 ms before restarting. (See Figure F)

### CONTROL FEATURES

**REMOTE ON/OFF (Pin 2):** The ON/OFF input, Pin 2, permits the user to control when the converter is on or off. This input is referenced to the return terminal of the input bus, Vin(-). There are two versions of the converter that differ by the sense of the logic used for the ON/OFF input.

In the positive logic version, the ON/OFF input is active high (meaning that a high turns the converter on). In the negative logic version, the ON/OFF signal is active low (meaning that a low turns the converter on). Figure A details five possible circuits for driving the ON/OFF pin. Figure B is a detailed look of the internal ON/OFF circuitry.

**OUTPUT VOLTAGE TRIM (Pin 6):** The TRIM input permits the user to adjust the output voltage up or down according to the trim range specifications. It is important to recognize that adjusting one output will also adjust the second output proportionally. To lower the output voltage, the user should connect a resistor between Pin 6 and Pin 4. To raise the output voltage, the user should connect a resistor between Pin 6 and Pin 5. The following table shows the resistor values needed to trim the output voltage up or down.

Vo(%)	1	2	3	4	5	6	7	8	9	10
<b>R<sub>up</sub></b>	46.4	20.5	12.1	8.06	5.23	3.57	2.21	1.30	0.604	0
<b>R<sub>down</sub></b>	57.6	25.5	14.0	8.87	5.90	3.83	2.32	1.30	0.432	0

Figure A: Various circuits for driving the ON/OFF pin.

Figure B: Internal ON/OFF pin circuitry

Resistor values in Kohms for the desired increase/decrease (typical) in output voltage (%)

**Note:** The TRIM feature does not affect the voltage at which the output over-voltage protection circuit is triggered. Trimming the output voltage too high may cause the over-voltage protection circuit to engage, particularly during transients.

**Total DC Variation of V<sub>out</sub>:** For the converter to meet its full specifications, the maximum variation of the DC value of V<sub>out</sub>, due to both trimming and remote load voltage drops, should not be greater than that specified for the output voltage trim range.

### PROTECTION FEATURES

**Input Under-Voltage Lockout:** The converter is designed to turn off when the input voltage is too low, helping avoid an input system instability problem, described in more detail in the application note titled "Input System Instability". The lockout circuitry is a comparator with DC hysteresis. When the input voltage is rising, it must exceed the typical Turn-On Voltage Threshold value (listed on the specification page) before the converter will turn on. Once the converter is on, the input voltage must fall below the typical Turn-Off Voltage Threshold value before the converter will turn off.

**Output Current Limit:** The maximum current limit remains constant as the output voltage drops. However, once the impedance of the short across the output is small enough to make the output voltage drop below the specified Output DC Current-Limit Shutdown Voltage, the converter turns off.

The converter then enters a "hiccup mode" where it repeatedly turns on and off at a 5 Hz (nominal) frequency with a 5% duty cycle until the short circuit condition is removed. This prevents

excessive heating of the converter or the load board.

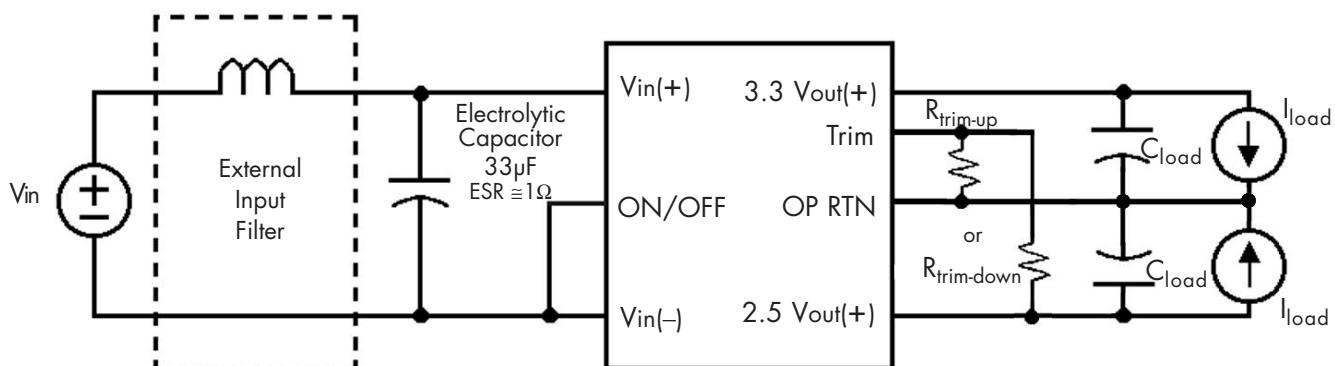

**Output Over-Voltage Limit:** If the voltage across the output pins exceeds the Output Over-Voltage Protection threshold, the converter will immediately stop switching. This prevents damage to the load circuit due to 1) excessive series resistance in output current path from converter output pins to sense point, 2) a release of a short-circuit condition, or 3) a release of a current limit condition. Load capacitance determines exactly how high the output voltage will rise in response to these conditions. After 200 ms the converter will automatically restart.

**Over-Temperature Shutdown:** A temperature sensor on the converter senses the average temperature of the module. The thermal shutdown circuit is designed to turn the converter off when the temperature at the sensed location reaches the Over-Temperature Shutdown value. It will allow the converter to turn on again when the temperature of the sensed location falls by the amount of the Over-Temperature Shutdown Restart Hysteresis value.

### APPLICATION CONSIDERATIONS

**Input System Instability:** This condition can occur because any DC/DC converter appears incrementally as a negative resistance load. A detailed application note titled "Input System Instability" is available on the SynQor web site ([www.synqor.com](http://www.synqor.com)) which provides an understanding of why this instability arises, and shows the preferred solution for correcting it.

**Application Circuits:** Figure D below provides a typical circuit diagram which details the input filtering and voltage trimming.

**Figure D:** Typical application circuit (negative logic unit, permanently enabled).

**Input Filtering and External Capacitance:** Figure E provides a diagram showing the internal input filter components. This filter dramatically reduces input terminal ripple current, which otherwise could exceed the rating of an external electrolytic input capacitor. The recommended external input capacitance is specified in the "Input Characteristics" section. More detailed information is available in the application note titled "EMI Characteristics" on the SynQor website.

**Figure E:** Internal Input Filter Diagram (values listed on page 3).

**Startup Inhibit Period:** The Startup Inhibit Period ensures that the converter will remain off for at least 200ms when it is shut down for any reason. When an output short is present, this generates a 5Hz "hiccup mode," which prevents the converter from overheating. In all, there are seven ways that the converter can be shut down, initiating a Startup Inhibit Period:

- Input Under-Voltage Lockout
- Input Over-Voltage Shutdown (not present in Quarter-brick)
- Output Over-Voltage Protection
- Over Temperature Shutdown
- Current Limit
- Short Circuit Protection
- Turned off by the ON/OFF input

Figure F shows three turn-on scenarios, where a Startup Inhibit Period is initiated at  $t_0$ ,  $t_1$ , and  $t_2$ :

Before time  $t_0$ , when the input voltage is below the UVL threshold, the unit is disabled by the Input Under-Voltage Lockout feature. When the input voltage rises above the UVL threshold, the Input Under-Voltage Lockout is released, and a Startup Inhibit Period is initiated. At the end of this delay, the ON/OFF pin is evaluated, and since it is active, the unit turns on.

At time  $t_1$ , the unit is disabled by the ON/OFF pin, and it cannot be enabled again until the Startup Inhibit Period has elapsed.

When the ON/OFF pin goes high after  $t_2$ , the Startup Inhibit Period has elapsed, and the output turns on within the typical Turn-On Time.

**Figure F:** Startup Inhibit Period (turn-on time not to scale)

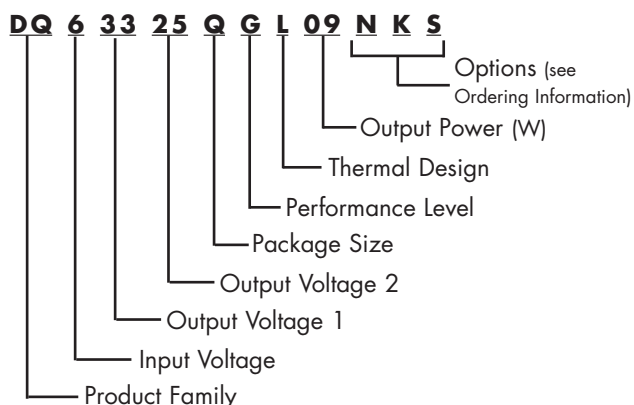

## Technical Specification

**Quarter  
Brick Dual**    **48V<sub>in</sub> 3.3/2.5V<sub>out</sub> 87W**

### PART NUMBERING SYSTEM

The part numbering system for SynQor's *DualQor* DC/DC converters follows the format shown in the example below.

The first 12 characters comprise the base part number and the last 3 characters indicate available options. Although there are no default values for options, the most common options are negative logic, 0.145" pins and standard feature set. These part numbers are more likely to be readily available in stock for evaluation and prototype quantities.

### Application Notes

A variety of application notes and technical white papers can be downloaded in pdf format at [www.synqor.com](http://www.synqor.com).

### Contact SynQor for further information:

**Phone:** 508-485-8434  
**Toll Free:** 888-567-9596  
**Fax:** 508-485-8414  
**E-mail:** [sales@synqor.com](mailto:sales@synqor.com)  
**Web:** [www.synqor.com](http://www.synqor.com)  
**Address:** 188 Central Street  
 Hudson, MA 01749

### ORDERING INFORMATION

Refer to the website for the most current list of valid model numbers and ordering options for converters in this product family. When ordering SynQor converters, please ensure that you use the complete 15 character part number consisting of the 12 character base part number and the additional 3 characters for options.

Model Number	Input Voltage	Output Voltages	Max Output Power
<a href="#">DQ63312QGL07xyz</a>	35 - 75 V	3.3/1.2 V	68 W
<a href="#">DQ63315QGL07xyz</a>	35 - 75 V	3.3/1.5 V	72 W
<a href="#">DQ63315QGL08xyz</a>	35 - 75 V	3.3/1.5 V	80 W
<a href="#">DQ63318QGL08xyz</a>	35 - 75 V	3.3/1.8 V	77 W
<a href="#">DQ63325QGL09xyz</a>	35 - 75 V	3.3/2.5 V	87 W
<a href="#">DQ65033QGL10xyz</a>	35 - 75 V	5.0/3.3 V	100 W
<a href="#">DQ63312QGA07xyz</a>	35 - 75 V	3.3/1.2 V	68 W
<a href="#">DQ63315QGA07xyz</a>	35 - 75 V	3.3/1.5 V	72 W
<a href="#">DQ63315QGA08xyz</a>	35 - 75 V	3.3/1.5 V	80 W
<a href="#">DQ63318QGA08xyz</a>	35 - 75 V	3.3/1.8 V	77 W
<a href="#">DQ63325QGA09xyz</a>	35 - 75 V	3.3/2.5 V	87 W
<a href="#">DQ65033QGA10xyz</a>	35 - 75 V	5.0/3.3 V	100 W

Modules listed above with QGA in part number have an increased bottom side board clearance and a slightly larger total height (see page 2 for dimensions). There are no other differences from the QGL units.

The following option choices must be included in the last three places of the model number.

Options Description: x y z		
Enable Logic	Pin Length	Feature Set
P - Positive N - Negative	K - 0.110" N - 0.145" R - 0.180" Y - 0.250"	S - Standard T - Independent Trim

#### Warranty

SynQor offers a three (3) year limited warranty. Complete warranty information is listed on our web site or is available upon request from SynQor.
