

KLF-551C-30

Description

KLF-551C-30 series are InGaAsP laser diodes which provide a stable, single transverse mode with 1550nm wavelength. The high performance behavior of the chip makes it suitable for low-cost short and intermediate reach applications.

FEATURES

- Low threshold current, low operating current
- Stable single transverse mode emission
- MQW active layer
- PBH structure
- Wide operating temperature range from -40°C to 85°C
- Modulation capability up to 1.25Gbps

APPLICATIONS

- FTTH (Fiber To The Home)
- Gigabit Ethernet
- Fiber Channel
