3-TERMINAL ADJUSTABLE VOLTAGE REGULATOR

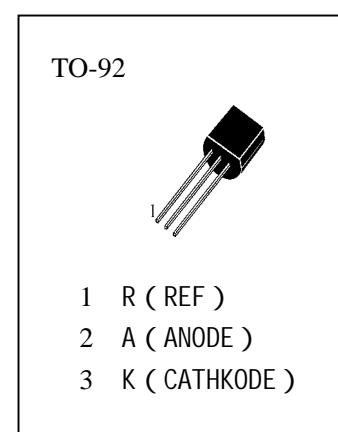

HTL431

Description

The HTL431 are three-terminal adjustable regulator series with a guaranteed thermal stability over applicable temperature ranges. The output voltage may be set to any value between V_{REF} (approximately 2.5 volts) and 36 volts with two external resistors. These devices have a typical dynamic output impedance of 0.2Ω. Active output circuitry provides a very sharp turn-on characteristic, making these devices excellent replacement for zener diodes in many applications.

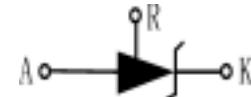

Features

- Equivalent Full-Range Temperature Coefficient of $T_{50}\text{PPM}/\text{Typical}$
- Programmable Output Voltage to 36 Volts
- Sink current Capability of 1.0 to 100mA
- Low Dynamic Output Impedance 0.2Ω Typical
- Low Output Noise Voltage
- Fast Turn-on Response
