

# Dual and Quad Micropower Chopper Stabilized, RRIO Operational Amplifiers

## ISL28233, ISL28433

The ISL28233 and ISL28433 are dual and quad micropower, chopper stabilized operational amplifiers that are optimized for single and dual supply operation from 1.65V to 6.0V and  $\pm 0.825\text{V}$  to  $\pm 3.0\text{V}$ . Their low supply current of  $18\mu\text{A}$  and wide input range enable the ISL28233, ISL28433 to be an excellent general purpose op amp for a wide range of applications. The ISL28233 and ISL28433 are ideal for handheld devices that operate off 2 AA or single Li-ion batteries.

The ISL28233 is available in 8 Ld MSOP and 8 Ld SOIC packages. The ISL28433 is available in 14 Ld TSSOP, 14 Ld SOIC and 14 Ld 3x4mm TDFN packages. All devices operate over the temperature range of  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$ .

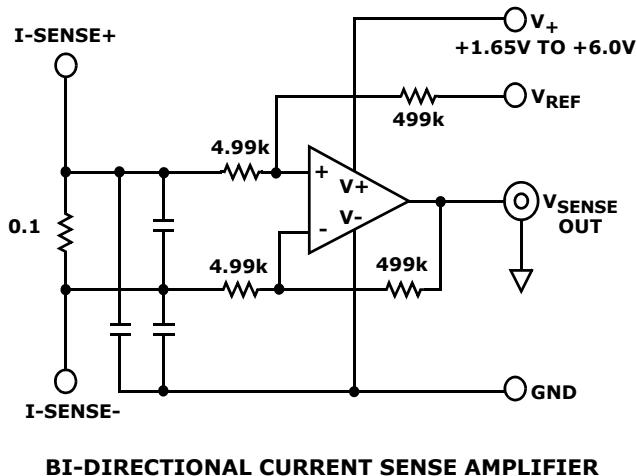

## Features

- Low Input Offset Voltage . . . . .  $6\mu\text{V}$ , Max.
- Low Offset Drift . . . . .  $0.05\mu\text{V}/^\circ\text{C}$ , Max.
- Quiescent Current (Per Amplifier) . . . . .  $18\mu\text{A}$ , Typ.
- Single Supply Range . . . . .  $+1.65\text{V}$  to  $+6.0\text{V}$
- Dual Supply Range . . . . .  $\pm 0.825\text{V}$  to  $\pm 3.0\text{V}$
- Low Noise (0.01Hz to 10Hz) . . . . .  $1.0\mu\text{V}_{\text{P-P}}$ , Typ.
- Rail-to-Rail Inputs and Output
- Input Bias Current . . . . .  $180\text{pA}$ , Max.
- Operating Temperature Range . . . . .  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$

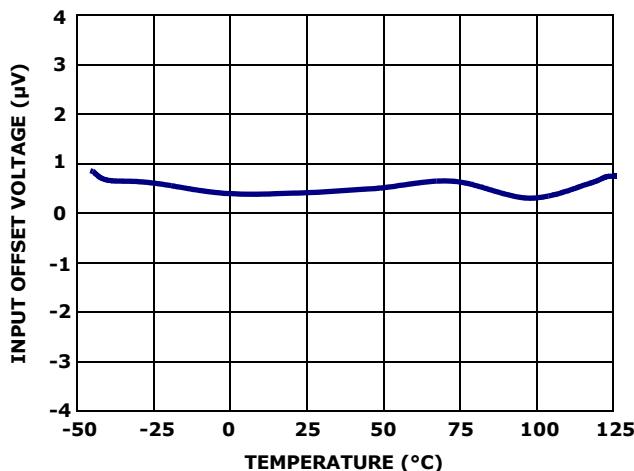

## Applications

- Bi-Directional Current Sense
- Temperature Measurement
- Medical Equipment
- Electronic Weigh Scales
- Precision/Strain Gauge Sensor
- Precision Regulation
- Low Ohmic Current Sense
- High Gain Analog Front Ends

## Typical Application

## V<sub>OS</sub> vs Temperature

NOTES:

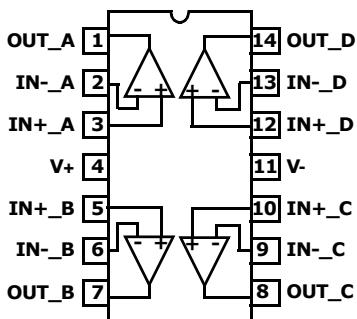

1. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28233](#), [ISL28433](#). For more information on MSL please see techbrief [TB363](#).

## Operating Conditions

Temperature Range . . . . .	-40°C to +125°C
-----------------------------	-----------------

*CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.*

### NOTES:

1.  $\theta_{JA}$  is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
2. For  $\theta_{JC}$ , the "case temp" location is the center of the exposed metal pad on the package underside.
3. For  $\theta_{JC}$ , the "case temp" location is taken at the package top center.

## Electrical Specifications

## Applications Information

### Functional Description

The ISL28233 and ISL28433 use a proprietary chopper-stabilized technique (see Figure 39) that combines a 400kHz main amplifier with a very high open loop gain (174dB) chopper amplifier to achieve very low offset voltage and drift ( $2\mu\text{V}$ ,  $0.01\mu\text{V}/^\circ\text{C}$  typical) while consuming only  $18\mu\text{A}$  of supply current per channel.

This multi-path amplifier architecture contains a time continuous main amplifier whose input DC offset is corrected by a parallel-connected, high gain chopper stabilized DC correction amplifier operating at 100kHz. From DC to  $\sim 5\text{kHz}$ , both amplifiers are active with DC offset correction and most of the low frequency gain is provided by the chopper amplifier. A 5kHz crossover filter cuts off the low frequency amplifier path leaving the main amplifier active out to the 400kHz gain-bandwidth product of the device.

The key benefits of this architecture for precision applications are very high open loop gain, very low DC offset, and low 1/f noise. The noise is virtually flat across the frequency range from a few millihertz out to 100kHz, except for the narrow noise peak at the amplifier crossover frequency (5kHz).

### Rail-to-rail Input and Output (RRIO)

The RRIO CMOS amplifier uses parallel input PMOS and NMOS that enable the inputs to swing 100mV beyond either supply rail. The inverting and non-inverting inputs do not have back-to-back input clamp diodes and are capable of maintaining high input impedance at high differential input voltages. This is effective in eliminating output distortion caused by high slew-rate input signals.

The output stage uses common source connected PMOS and NMOS devices to achieve rail-to-rail output drive capability with  $17\text{mA}$  current limit and the capability to swing to within 20mV of either rail while driving a  $10\text{k}\Omega$  load.

### IN+ and IN- Protection

All input terminals have internal ESD protection diodes to both positive and negative supply rails, limiting the input voltage to within one diode beyond the supply rails. For applications where either input is expected to exceed the rails by  $0.5\text{V}$ , an external series resistor must be used to ensure the input currents never exceed  $20\text{mA}$  (see Figure 40).

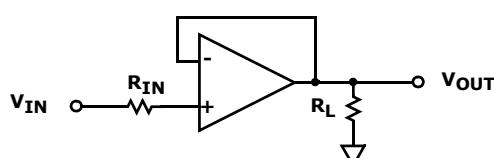

FIGURE 40. INPUT CURRENT LIMITING

### Layout Guidelines for High Impedance Inputs

To achieve the maximum performance of the high input impedance and low offset voltage of the ISL28233 and ISL28433 amplifiers, care should be taken in the circuit board layout. The PC board surface must remain clean and free of moisture to avoid leakage currents between adjacent traces. Surface coating of the circuit board will reduce surface moisture and provide a humidity barrier, reducing parasitic resistance on the board.

### High Gain, Precision DC-Coupled Amplifier

The circuit in Figure 41 implements a single-stage DC-coupled amplifier with an input DC sensitivity of under  $100\text{nV}$  that is only possible using a low V<sub>OS</sub> amplifier with high open loop gain. High gain DC amplifiers operating from low voltage supplies are not practical using typical low offset precision op amps. For example, a typical precision amplifier in a gain of  $10\text{KV/V}$  with a  $\pm 100\mu\text{V}$  V<sub>OS</sub> and offset drift  $0.5\mu\text{V}/^\circ\text{C}$  of a low offset op amp would produce a DC error of  $>1\text{V}$  with an additional  $5\text{mV}/^\circ\text{C}$  of temperature dependent error making it difficult to resolve DC input voltage changes in the mV range.

The  $\pm 6\mu\text{V}$  max V<sub>OS</sub> and  $0.05\mu\text{V}/^\circ\text{C}$  max temperature drift of the ISL28233, ISL28433 produces a temperature stable maximum DC output error of only  $\pm 60\text{mV}$  with a maximum output temperature drift of  $0.5\text{mV}/^\circ\text{C}$ . The additional benefit of a very low 1/f noise corner frequency and some feedback filtering enables DC voltages and voltage fluctuations well below  $100\text{nV}$  to be easily detected with a simple single stage amplifier.

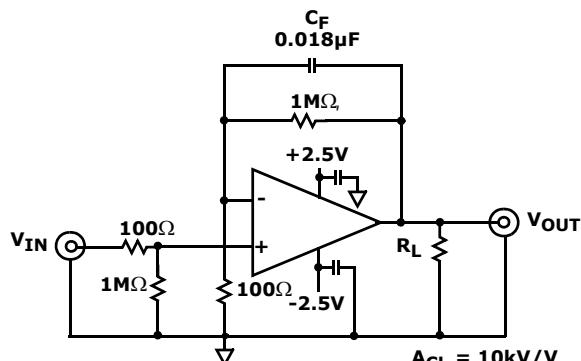

FIGURE 41. HIGH GAIN, PRECISION DC-COUPLED AMPLIFIER

### ISL28233, ISL28433 SPICE Model

Figure 42 shows the SPICE model schematic and Figure 43 shows the net list for the ISL28233, ISL28433 SPICE model. The model is a simplified version of the actual device and simulates important parameters such as noise, Slew Rate, Gain and Phase. The model uses typical parameters from the "Electrical Specifications Table" on page 4. The poles and zeroes in the model were determined from the actual open and closed-loop gain and phase response. This enables the model to

present an accurate AC representation of the actual device. The model is configured for ambient temperature of +25°C.

Figures 44 through 51 show the characterization vs simulation results for the Noise Density, Frequency Response vs Close Loop Gain, Gain vs Frequency vs  $C_L$  and Large Signal Step Response (4V).

## Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
8/25/10	FN7692.0	Initial Release.

## Products

Intersil Corporation is a leader in the design and manufacture of high-performance analog semiconductors. The Company's products address some of the industry's fastest growing markets, such as, flat panel displays, cell phones, handheld products, and notebooks. Intersil's product families address power management and analog signal processing functions. Go to [www.intersil.com/products](http://www.intersil.com/products) for a complete list of Intersil product families.

\*For a complete listing of Applications, Related Documentation and Related Parts, please see the respective device information page on intersil.com: [ISL28233, ISL28433](#)

To report errors or suggestions for this datasheet, please go to [www.intersil.com/askourstaff](http://www.intersil.com/askourstaff)

FITs are available from our website at <http://rel.intersil.com/reports/search.php>

For additional products, see [www.intersil.com/product\\_tree](http://www.intersil.com/product_tree)

Intersil products are manufactured, assembled and tested utilizing ISO9000 quality systems as noted in the quality certifications found at [www.intersil.com/design/quality](http://www.intersil.com/design/quality)

*Intersil products are sold by description only. Intersil Corporation reserves the right to make changes in circuit design, software and/or specifications at any time without notice. Accordingly, the reader is cautioned to verify that data sheets are current before placing orders. Information furnished by Intersil is believed to be accurate and reliable. However, no responsibility is assumed by Intersil or its subsidiaries for its use; nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Intersil or its subsidiaries.*

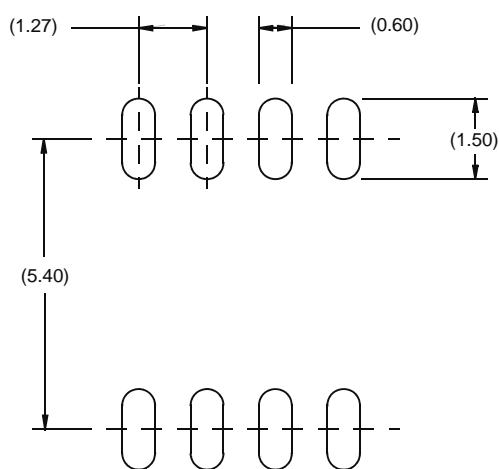

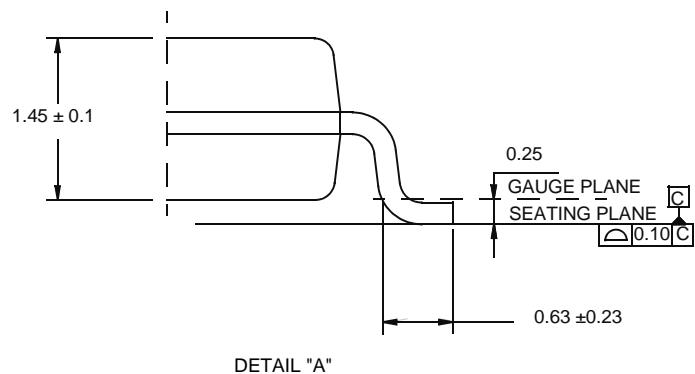

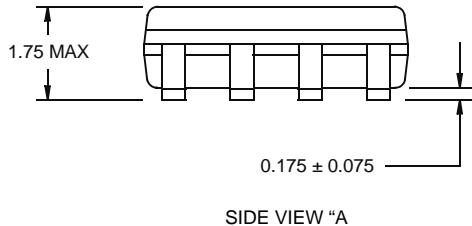

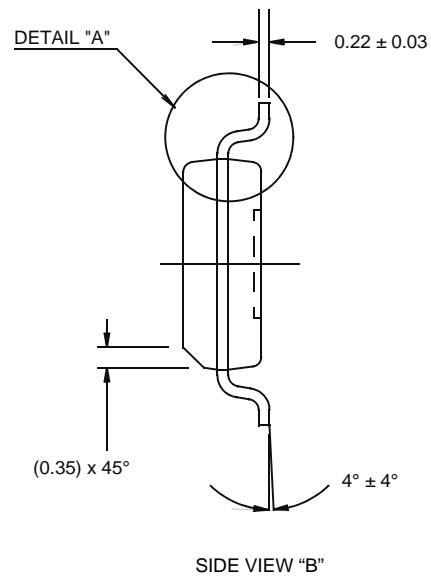

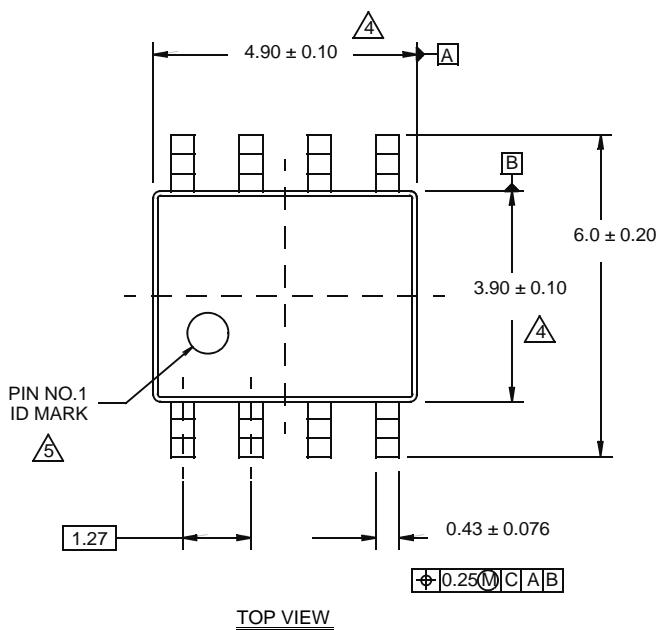

For information regarding Intersil Corporation and its products, see [www.intersil.com](http://www.intersil.com)

## Package Outline Drawing

**M8.15E**

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 0, 08/09

### NOTES:

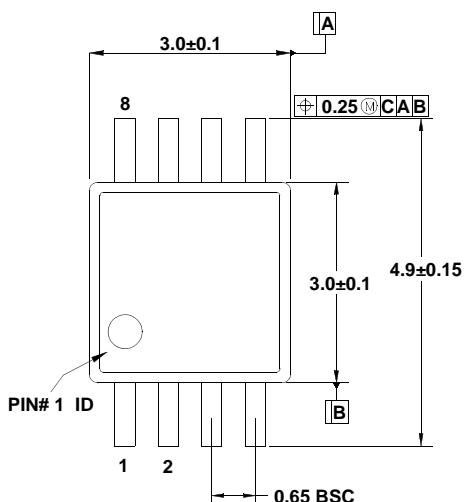

1. Dimensions are in millimeters.  
Dimensions in ( ) for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal  $\pm 0.05$
4. Dimension does not include interlead flash or protrusions.  
Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.

## Package Outline Drawing

8 LEAD MINI SMALL OUTLINE PLASTIC PACKAGE (MSOP)

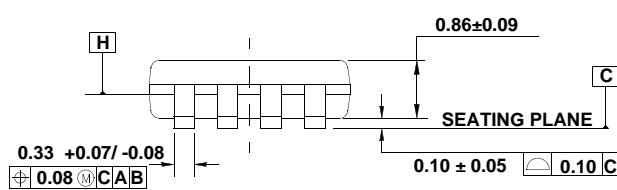

Rev 0, 9/09

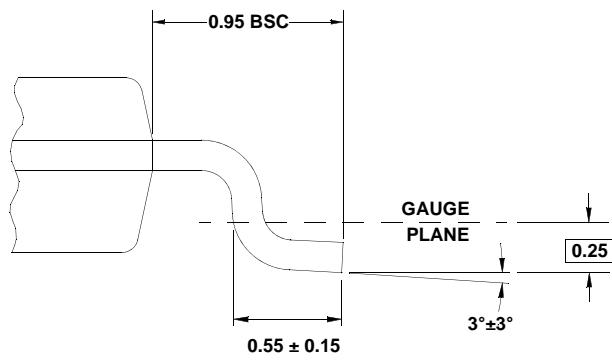

TOP VIEW

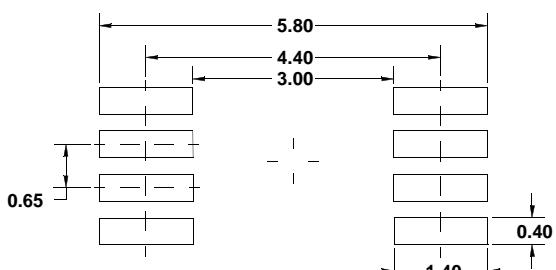

SIDE VIEW 2

SIDE VIEW 1

DETAIL "X"

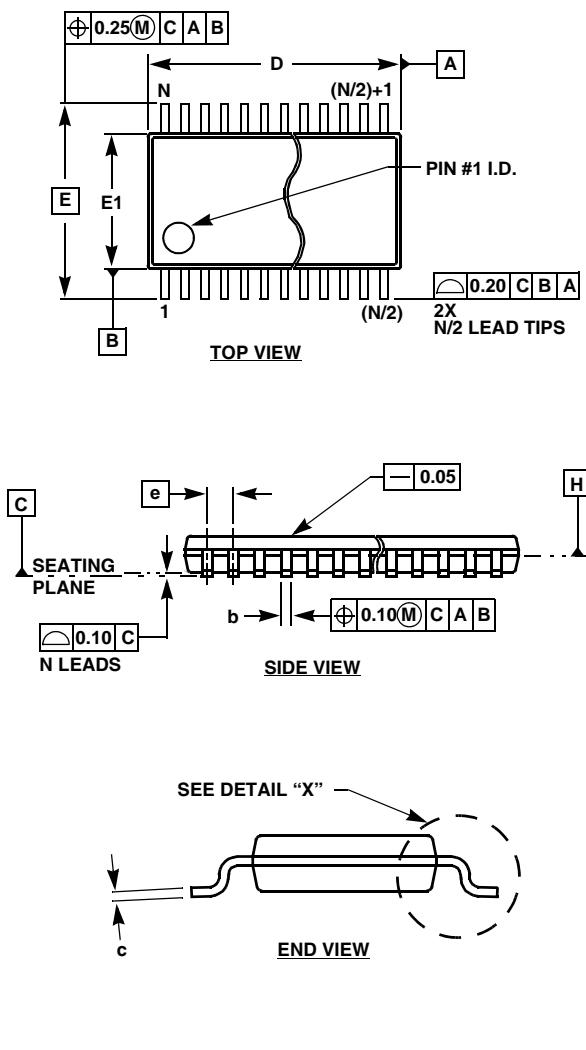

TYPICAL RECOMMENDED LAND PATTERN

### NOTES:

1. Dimensions are in millimeters.
2. Dimensioning and tolerancing conform to JEDEC MO-187-AA and AMSE Y14.5m-1994.
3. Plastic or metal protrusions of 0.15mm max per side are not included.
4. Plastic interlead protrusions of 0.25mm max per side are not included.
5. Dimensions "D" and "E1" are measured at Datum Plane "H".
6. This replaces existing drawing # MDP0043 MSOP 8L.

Rev. F 2/07

**NOTES:**

- Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15mm per side.
- Dimension "E1" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm per side.
- Dimensions "D" and "E1" are measured at datum Plane H.
- Dimensioning and tolerancing per ASME Y14.5M-1994.
