NX5DV330

Quad 1-of-2 video multiplexer/demultiplexer

Rev. 03 — 5 August 2009 Product data sheet

1. General description

The NX5DV330 is a quad 1-of-2 high-speed TTL-compatible video multiplexer/demultiplexer. The low ON resistance of the switch allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise

It has a digital select input (S), four independent inputs/outputs (nY0, nY1), a common input/output (nZ) and an active LOW enable input ($\overline{E}$). When pin $\overline{E}$ is HIGH, the switch is turned off.

Schmitt-trigger action at the enable input ($\overline{E}$) and select input (S) makes the circuit tolerant to slower input rise and fall times across the entire V_{CC} range from 4.0 V to 5.5 V.

The NX5DV330 is characterized for operation from −40 °C to +85 °C.

2. Features

- 5 Ω switch connection between two ports
- TTL-compatible input levels
- Minimal propagation delay through the switch
