

Bulk Metal[®] Foil Technology Power Current Sensing Resistors with TCR of 5 ppm/°C and Power Rating up to 7 Watts

Any value available within resistance range

These Bulk Metal[®] Foil power current sensing resistors are direct replacements for certain wirewound devices but without the inductive characteristics of wirewounds. The anodized aluminum housing is drilled and countersunk to accept flat head screws for thermal mounting. Because the device is internally Kelvin connected, there is no restriction on the lead lengths as would be the case if this were a two terminal device. Frequently used in YIG oscillator circuits these devices contribute to superior frequency stability.
