PHOTO IC

# Photo IC for laser beam synchronous detection

## S9703-10/-11

### High sensitivity, high-speed response

S9703 series photo IC uses a high-speed PIN photodiode designed for laser beam synchronous detection. When compared to S9703 and S9703-01 previously marketed, S9703-10 and S9703-11 have reduced their reflection effects in the package. Two types of current amplifiers are available with a gain of 6 times (S9703-11) and 20 times (S9703-10) that can be selected according to laser power to be used. Tape-and-reel shipment is available (S9703-30 and S9703-31). HAMAMATSU also provides S9684 series photo ICs that use a dual-element Si PIN photodiode.

#### Features

- High sensitivity  
Current amplifier gain: 20 times (S9703-10)  
6 times (S9703-11)
- Digital output
- Small package
- Suitable for lead-free solder reflow
- Active area: 2.84 × 0.5 mm

#### Applications

- Print start timing detection for laser printers, digital copiers, fax machines, etc.

■ Function

S9703-10/-11 photo IC integrates a photodiode chip and an IC chip into the same package. The photodiode chip is internally connected to the IC chip as shown in the block diagram. S9703-10/-11 should be used with terminal Ro connected to an external gain resistance Ro.

A photocurrent is generated when a laser beam enters the photodiode. This photocurrent is fed to the input terminal of the IC and, after being amplified by the current amplifier, flows to the external gain resistance. At this time, voltages VRO at terminal Ro is given by the following expression.

$$V_{RO} = A \times S \times P_i \times R_o \text{ [V]} \dots\dots\dots (1)$$

A: Current amplifier gain (S9703-10: 20 times, S9703-11: 6 times)

S: Photodiode sensitivity [A/W] (approx. 0.44 A/W at 780 nm)

Pi: Input power [W]

Ro: External gain resistance [Ω]; usable range 2 kΩ to 10 kΩ

VRO is input to the internal comparator and compared with the internal reference voltage Vref (approx. 1 V) so the output Vo is "High" when VRO < Vref or "Low" when VRO > Vref.

In equation (1), set the Ro value so that VRO is 2 to 3 V.
