* Internal snubber network for dv/dt protection and low EMI

NOTES:

1. For frequencies above 70 Hz turn on voltage is 6.0 Vdc minimum.
2. All tests are performed with a line voltage of 220 Vrms.
3. Output may lose blocking capability during and after surge until T_J falls below maximum.
4. The dv/dt rating is based on a source impedance of 50 Ω .
5. Relays mounted with silicone grease on a 1°C/W heat sink

DESCRIPTION

The C15 series solid state relays employ back-to-back SCRs with a zero crossing turn-on circuit. The tight zero switch window ensures reliable low transient and low EMI noise generation. Optical isolation of control from output prevents switching noise from coupling into signal, power and ground distribution systems for noise free power switching. This series of solid state relay can switch from 10 to 25 Arms to 280 Vrms.
