

Features

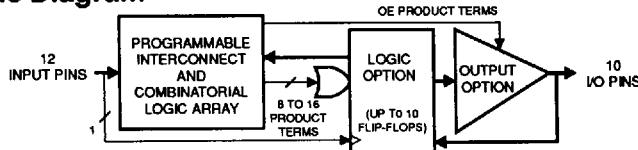

- Low Voltage Programmable Logic Device
 - Wide Power Supply Range - 3.0 V to 5.5 V
 - Ideal for Battery Powered Systems
- High Speed Operation
 - 20 ns max Propagation Delay at Vcc = 3.0 V
- Full Military, Commercial and Industrial Temperature Ranges
- Familiar 22V10 Logic Architecture
- Low Power 3-Volt CMOS Operation

	AT22LV10L	AT22LV10
Temp	Com./MII.	Com./MII.
Icc (mA)	4 / 5	35 / 45

Vcc = 3.6 V

- CMOS and TTL Compatible Inputs and Outputs
 - 10 μ A Leakage Maximum
- Reprogrammable - Tested 100% for Programmability
- High Reliability CMOS Technology
 - 2000 V ESD Protection
 - 200 mA Latchup Immunity
- Dual-In-Line and Surface Mount Packages

Logic Diagram

Description

The AT22LV10 and AT22LV10L are low voltage compatible CMOS high performance Erasable Programmable Logic Devices (EPLDs). Speeds down to 20 ns and power dissipation as low as 14.4 mW are offered. All speed ranges are specified over the 3.0 V to 5.5 V range. All pins offer a low $\pm 10 \mu$ A leakage.

The AT22LV10L provides the optimum low power CMOS EPLD solution, with low DC power (1 mA typical at Vcc = 3.3 V) and full CMOS output levels. The AT22LV10L significantly reduces total system power, allowing battery powered operation.

Full CMOS output levels help reduce power in many other system components.

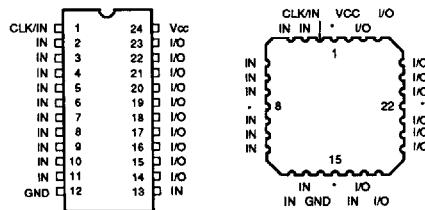

The AT22LV10 and AT22LV10L logic architectures are identical to the familiar 22V10. Each output is allocated from eight to 16 product terms, which allows highly complex logic functions to be realized.

Two additional product terms are included to provide synchronous preset and asynchronous reset. These terms are common to all ten registers. All registers are automatically cleared upon power up.

Register Preload simplifies testing. A Security Fuse prevents unauthorized copying of programmed fuse patterns.

Pin Configurations

Pin Name	Function
CLK/IN	Clock and Logic Input
IN	Logic Inputs
I/O	Bidirectional Buffers
*	No Internal Connection
VCC	3.0 V to 5.5 V Supply

Low Voltage UV Erasable Programmable Logic Device

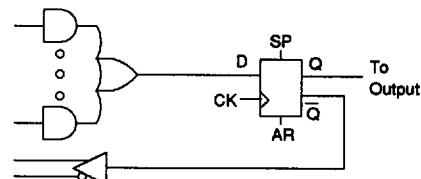

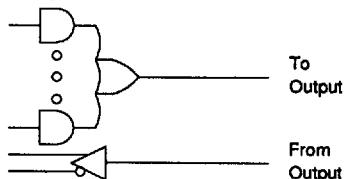

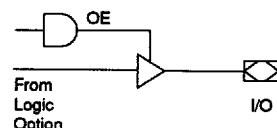

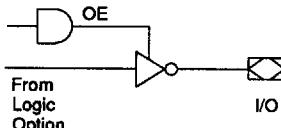

Absolute Maximum Ratings*

Temperature Under Bias.....	-55°C to +125°C
Storage Temperature.....	-65°C to +150°C
Voltage on Any Pin with Respect to Ground.....	-2.0 V to +7.0 V ⁽¹⁾
Voltage on Input Pins with Respect to Ground During Programming.....	-2.0 V to +14.0 V ⁽¹⁾
Programming Voltage with Respect to Ground.....	-2.0 V to +14.0 V ⁽¹⁾
Integrated UV Erase Dose.....	7258 W·sec/cm ²

*NOTICE: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note:

1. Minimum voltage is -0.6 V dc which may undershoot to -2.0 V for pulses of less than 20 ns. Maximum pin voltage is V_{CC}+0.75 V dc which may overshoot to V_{CC}+2.0 V for pulses of less than 20 ns.

Output Test Loads:**Commercial****Military**

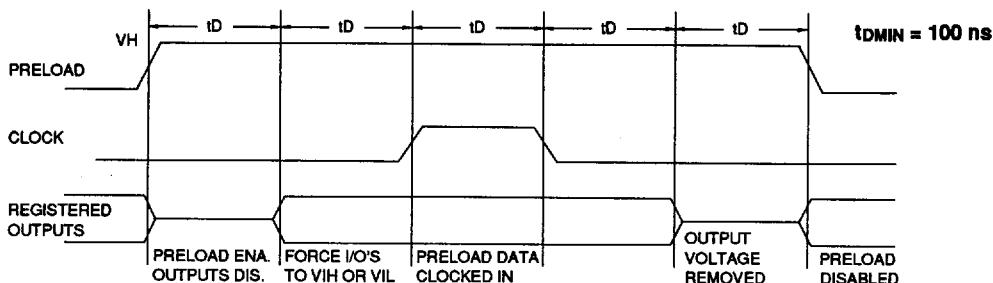

Functional Logic Diagram AT22LV10/L

Preload of Registered Outputs

The registers in the AT22LV10 and AT22LV10L are provided with circuitry to allow loading of each register asynchronously with either a high or a low. This feature will simplify testing since any state can be forced into the registers to control test sequencing. A V_{IH} level on the I/O pin will force the register high; a V_{IL} will force it low, independent of the polarity bit (C0) setting. The PRELOAD state is entered by placing an 11 V to 14 V signal on pin 8 on DIPs, and pin 10 on SMDs. When the clock pin is pulsed high, the data on the I/O pins is placed into the ten registers.

Level forced on registered output pin during PRELOAD cycle.	Register state After Cycle
V_{IH}	High
V_{IL}	Low

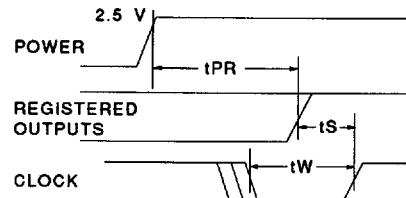

Power Up Reset

The registers in the AT22LV10 and AT22LV10L are designed to reset during power up. At a point delayed slightly from V_{CC} crossing 2.5 V, all registers will be reset to the low state. The output state will depend on the polarity of the output buffer.

This feature is critical for state machine initialization. However, due to the asynchronous nature of reset and the uncertainty of how V_{CC} actually rises in the system, the following conditions are required:

- 1) The V_{CC} rise must be monotonic,
- 2) After reset occurs, all input and feedback setup times must be met before driving the clock pin high, and
- 3) The clock must remain stable during t_{PR} .

Parameter	Description	Min	Typ	Max	Units
t_{PR}	Power-Up Reset Time	600	1000	ns	

Pin Capacitance ($f = 1$ MHz, $T = 25^\circ\text{C}$)⁽¹⁾

	Typ	Max	Units	Conditions
C_{IN}	5	8	pF	$V_{IN} = 0$ V
C_{OUT}	6	8	pF	$V_{OUT} = 0$ V

Note: 1. Typical values for nominal supply voltage. This parameter is only sampled and is not 100% tested.

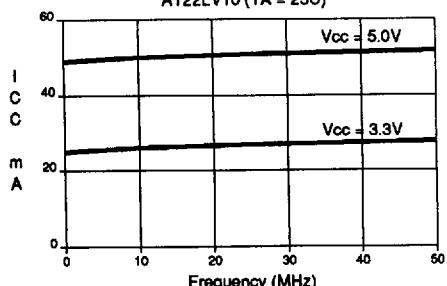

Erasure Characteristics

The entire fuse array of an AT22LV10 or AT22LV10L is erased after exposure to ultraviolet light at a wavelength of 2537 Å. Complete erasure is assured after a minimum of 20 minutes exposure using $12,000 \mu\text{W}/\text{cm}^2$ intensity lamps spaced one inch away from the chip. Minimum erase time for lamps at other in-

tensity ratings can be calculated from the minimum integrated erasure dose of $15 \text{ W}\cdot\text{sec}/\text{cm}^2$. To prevent unintentional erasure, an opaque label is recommended to cover the clear window on any UV erasable EPROM which will be subjected to continuous fluorescent indoor lighting or sunlight.

ATMEL CORP

Package Type	
24DW3	24 Lead, 0.300" Wide, Windowed, Ceramic Dual Inline Package (Cerdip)
24C	24 Lead, Non-Windowed, Ceramic Flat Package (Cerpack)
24D3	24 Lead, 0.300" Wide, Non-Windowed (OTP), Ceramic Dual Inline Package (Cerdip)
28J	28 Lead, Plastic J-Leaded Chip Carrier OTP (PLCC)
28KW	28 Lead, Windowed, Ceramic J-Leaded Chip Carrier (JLCC)
28LW	28 Pad, Windowed, Ceramic Leadless Chip Carrier (LCC)
28L	28 Pad, Non-Windowed, Ceramic Leadless Chip Carrier OTP (LCC)
24P3	24 Lead, 0.300" Wide, Plastic Dual Inline Package OTP (PDIP)
24S	24 Lead, 0.300" Wide, Plastic Gull Wing Small Outline OTP (SOIC)
24CW	24 Lead, Windowed, Ceramic Flat Package (Cerpack)
