## Short Descriptions

This is an SoC chip suitable for portable MP3 audio player with minimal component. With developing system provided, it is easy to fit every versatile applications.

## Features

- 24 bits DSP Core with on-chip ICE support
- On-chip DSP 16K\*24 PM and (16K-256)\*24 DM, can be switched to be MCU memory space
- Integrated 8bit MCU with on-chip ICE support which the instructions are compatible with the Z80 CPU
- Internal 16k bytes SRAM accessed by MCU
- External up to 512M bytes program MROM/Flash/SRAM accessed by MCU or DMA
- External SmartMedia Card/MultiMedia Card support
- Support 14.318MHz/16.368MHz/17.734475MHz/24.576MHz OSC with on-chip PLL for DSP
- Supported Nand type and Nor type flash memory
- 2-channel DMA for MCU
- 1-channel CTC(Counter/Timer Controller) for MCU
- On-chip interrupt controller for MCU
- Built-in power management unit(PMU), supporting 1 or 2 batteries operation
- Support RTC with 32.768kHz or 76.8kHz OSC
- Support USB1.1 interface
- Support SPDIF IN/UART/IR interface
- Support on-chip Stereo 18 bit Sigma-Delta DAC
- Support external LCM/Keyboard Autoscan(4\*9)/GPIO
- Support external 320\*240/240\*160/240\*120... LCM with Frame Buffer built-in
- Support external 68xx interface LCM, such as Motorola MC141803 LCD
- Support on-chip 1/3 biased 1/4 duty LCD driver(4\*13DOTs)/Keyboard(2\*13)/GPIO
- Support external CMOS image sensor interface
- Support FM IF input with counter
- On-chip 16-bit ADC for Microphone input and touch panel support , sample rate at 8K/11K/12K/16K/22K/24K/32K
- On-chip 2 channel power amplifiers
- Key-in Tone uses GPIO, implemented by SW
- 176-pin LQFP package

## ELECTRICAL CHARACTERISTIC

### A. Absolute Maximum Ratings (TA = 25°C)

Parameter	Symbol	Condition	Rating	Unit
Supply voltage	VDD	2.5V	-0.5 to +3.0	V
	VCC	3.3V	-0.5 to +3.9	V
Input voltage	Vi	VCC >= 3.3	-0.5 to +3.9	V
		VCC < 3.3	-0.5 to VCC+0.6	V
Storage temperature	Tstg		-65 to +150	°C

**Cautions 1. Do not short-circuit two or more output pins simultaneously.**

**2. If even one of the above parameters exceeds the absolute maximum ratings even momentarily, the quality of the product may be degraded. The absolute maximum ratings, therefore, specify the value exceeding which the product may be physically damaged. Use the product well within these ratings.**

The specifications and conditions shown in DC Characteristics and AC characteristics are the ranges for normal operation and quality assurance of the product.

### B. Capacitance (TA = 25°C, VCC = 0 V)

Parameter	Symbol	Condition	MIN.	MAX.	Unit
Input capacitance	CI	fc = 1 MHz		15	pF
I/O capacitance	CIO	Unmeasured pins returned to 0 V		15	pF

### C. DC Characteristics (TA = -10 to +70°C, VDD = 2.35 V, VCC = 3.15 V)

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
High-level output voltage	VOH	IOH = -2 mA	2.4			V
Low-level output voltage	VOL	IOL = 2 mA			0.4	V
High-level input voltage	VIH		0.6* VCC		VCC + 0.6	V
Low-level input voltage	VIL		-0.3		0.4V C	V
Input leakage current	ILI	VCC = 3.6 V, Vi = VCC, 0 V			±10	uA
Output leakage current	ILO	VCC = 3.6 V, Vi = VCC, 0 V			±5	uA

## F. RECOMMENDED SOLDERING CONDITIONS

The conditions listed below shall be met when soldering the ATJ2001.

Table 4-1. Soldering Conditions for Surface-Mount Devices

Soldering Process	Soldering Conditions
Infrared ray reflow	Peak package's surface temperature: 235°C
	Reflow time: 30 seconds or less (210°C or more)
	Maximum allowable number of reflow processes: 2
	Exposure limit: 3 days <sup>Note</sup> (10 hours of pre-baking is required at 125°C afterward).
Partial heating method	Terminal temperature: 300°C or less
	Heat time: 3 seconds or less (for one side of a device)

**Note** Maximum number of days during which the product can be stored at a temperature of 25°C and a relative humidity of 65% or less after dry-pack package is opened.

**Caution** Do not apply two or more different soldering methods to one chip (except for partial heating method for terminal sections).

## NOTES FOR CMOS DEVICES

### 1 PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control

must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

### **2 HANDLING OF UNUSED INPUT PINS FOR CMOS**

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

### **3 STATUS BEFORE INITIALIZATION OF MOS DEVICES**

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.
