Ordering Information

Part No.	Temp. Range	Package	Outline #
EL7661CN	-40°C to +85°C	18-Pin P-DIP	MDP0031

General Description

The EL7661 provides a low cost solution to many full bridge applications. The EL7661 is DC coupled so that there are no start up problems associated with AC coupled schemes. A single resistor from the DSET pins to GND provides "dead time" programmability. Shorting the DSET pins to V_{DD} gives the minimum delay (~ 100 ns).

Important Note:

All parameters having Min/Max specifications are guaranteed. The Test Level column indicates the specific device testing actually performed during production and Quality inspection. Elantec performs most electrical tests using modern high-speed automatic test equipment, specifically the LTX77 Series system. Unless otherwise noted, all tests are pulsed tests, therefore $T_J = T_C = T_A$.

Test Level	Test Procedure
I	100% production tested and QA sample tested per QA test plan QCX0002.
II	100% production tested at $T_A = 25^\circ\text{C}$ and QA sample tested at $T_A = 25^\circ\text{C}$, T_{MAX} and T_{MIN} per QA test plan QCX0002.
III	QA sample tested per QA test plan QCX0002.
IV	Parameter is guaranteed (but not tested) by Design and Characterization Data.
V	Parameter is typical value at $T_A = 25^\circ\text{C}$ for information purposes only.
