&
D514™
Impact
with
International
Blades

for all current

connection block types

Today's diverse connection block types require a variety of termination tools. Until now, technicians needed to carry an assortment of tools in order to be prepared for the variety of international connection blocks. Harris' newest D414 Non-Impact and D514 Impact termination tools work for all current connection block types, including SID, ID 3000, LSA-Plus, Trl71 and the STG/Pouyet.

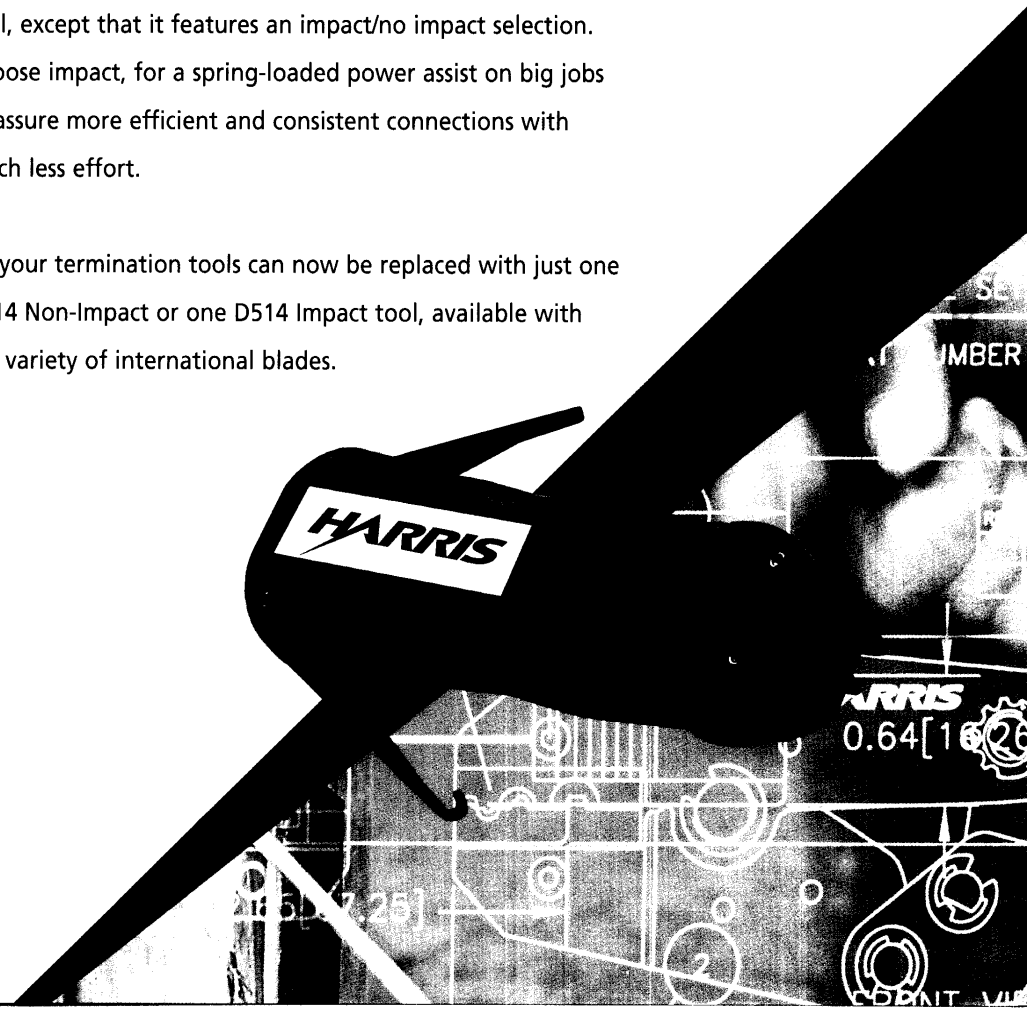

The new tools feature ergonomically shaped handles that house an integrated wire pulling hook as well as a release tool for the LSA-Plus connection block. A symbol embossed on the face of the handle identifies the cutting side.

Changing the tool blade is as easy as pressing the push buttons on each side. The handle point and blade insert areas are made of metal for secure blade inserts and long service life.

The D514 Impact termination tool is the same as the D414 tool, except that it features an impact/no impact selection. Choose impact, for a spring-loaded power assist on big jobs to assure more efficient and consistent connections with much less effort.

All your termination tools can now be replaced with just one D414 Non-Impact or one D514 Impact tool, available with the variety of international blades.

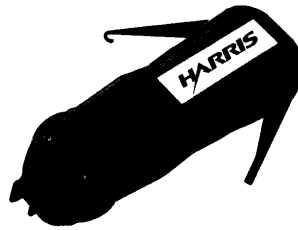

next level solutions

D414 Non-Impact & D514 Impact Termination Tools

Features

- For all current connection blocks, including SID, ID 3000, LSA-Plus, Trl71, and the STG/Pouyet.
- Interchangeable blades
- Easy blade insertion
- Simple switching between cut and no-cut
