

# FSA201 USB2.0 Full-Speed and Audio Switches with Negative Signal Capability

## Features

- 3Ω Typical ON Resistance
- -3db Bandwidth: > 250MHz
- Low Power Consumption
- Packaged in Pb-free 10-Lead MicroPak™ (1.6 x 2.1mm), 10-pin MSOP (Preliminary)
- Power-off Protection on Common D+/R, D-/L Ports
- Automatically Detects  $V_{bus}$  for Switch Path Selection

## Applications

- Cell Phone, PDA, Digital Camera, and Notebook
- LCD Monitor, TV, and Set-top Box

## Description

The FSA201 is a Double-Pole, Double Throw (DPDT) multiplexer that combines a low-distortion audio and a USB2.0 Full-Speed (FS) switch path. This configuration enables audio and USB data to share a common connector port. The architecture is designed to allow audio signals to swing below ground. This means a common USB and headphone jack can be used for personal media players and similar portable peripheral devices.

Since USB2.0 is an industry standard for shared data-path in portable devices, the FSA201 also incorporates a  $V_{bus}$  detection capability. The FSA201 includes a power-off feature to minimize current consumption when  $V_{bus}$  is not present. This power-off circuitry is available for the common D+/R, D-/L ports only. Typical applications involve switching in portables and consumer applications, such as cell phones, digital cameras, and notebooks with hubs or controllers.

## Ordering Information

| Part Number             | Package Number | Pb-Free | Packing Description                    |

## Pin Descriptions

| Pin # | Name               | Description  |
|-------|--------------------|--|
| 1, 2  | D+, D-             | USB data bus input sources   |
| 6     | V <sub>audio</sub> | Power supply (audio)   |
| 3, 4  | R, L               | Audio right and left input sources   |
| 9     | A <sub>Sel</sub>   | Audio select to override auto USB detect when V <sub>AUDIO</sub> supply is present |
| 10    | V <sub>bus</sub>   | Power supply (USB) and auto USB switch-path select                                 |
| 8, 7  | D+/R, D-/L         | USB and audio common connector ports   |

## Truth Table

| A <sub>Sel</sub> <sup>(1)</sup> | V <sub>audio</sub> | V <sub>bus</sub> | L, R | D+, D- |
|---------------------------------|--------------------|------------------|------|--------|
| L                               | L                  | L                | OFF  | OFF    |
| L                               | L                  | H <sup>(2)</sup> | OFF  | ON     |
| L                               | H <sup>(2)</sup>   | L                | ON   | OFF    |
| L                               | H <sup>(2)</sup>   | H <sup>(2)</sup> | OFF  | ON     |
| H                               | L                  | L                | OFF  | OFF    |
| H                               | L                  | H <sup>(2)</sup> | OFF  | ON     |
| H                               | H <sup>(2)</sup>   | L                | ON   | OFF    |
| H                               | H <sup>(2)</sup>   | H <sup>(2)</sup> | ON   | OFF    |

### Notes:

1. A<sub>Sel</sub> - Internal resistor to GND provides auto-V<sub>bus</sub> detect if there is no external connection. Forcing A<sub>Sel</sub> HIGH when V<sub>AUDIO</sub> is present overrides the USB path even if V<sub>bus</sub> is present.
2. H - Value is the threshold as defined to meet USB2.0 V<sub>bus</sub> requirements and audio supply threshold in a system (see DC Tables).

## Functional Description

The FSA201 is a combined USB and audio switch that enables sharing the D+/D- lines of a USB connector with stereo audio CODEC outputs. The switch is optimized for full-speed USB signals and includes an automatic  $V_{bus}$ -detection circuit. When a USB connector, rather than a headphone, is connected to the ultra-portable device the switch is automatically configured for full-speed USB data transfer. If no  $V_{bus}$  is detected, and yet  $V_{audio}$  is present, the switch is configured for the low-distortion audio switch path. The audio switch path also handles negative signals (down to -2V), which eliminates the need for large coupling capacitors.

For those applications where the  $V_{bus}$  is generated as a self-powered device or where  $V_{bus}$  is not removed, the  $A_{Sel}$  pin provides the ability to switch, under software control, to the audio path. The  $A_{Sel}$  pin is internally

terminated by a resistor to GND (typical value  $3M\Omega$ ) and requires no connection for the standard ultra-portable (cell-phone, MP3, or Portable Media Player). In an application where the supply to the FSA201  $V_{bus}$  pin is not guaranteed to be removed, a GPIO pin can be used to switch out of full-speed USB mode into audio mode, using the  $A_{Sel}$  pin.

The FSA201  $V_{bus}$  pin must be connected directly to  $V_{bus}$  or a supply > 3.8V, not an LDO regulated down to 3.6V or a  $V_{bat}$ -generated supply that may fall below 3.8V in normal operation (see the Application Diagram).

## PRELIMINARY

### Absolute Maximum Ratings

The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table defines the conditions for actual device operation.

| Symbol             | Parameter   | Conditions              |  |
|--------------------|---|-------------------------|--|
| $V_{\text{Audio}}$ | Supply Voltage  | -0.5V to 6.0V           |  |
| $V_{\text{bus}}$   | Supply Voltage  | -0.5V to 6.0V           |  |
| $V_{\text{SW}}$    | Switch I/O Voltage <sup>(3)</sup>                             | R, L Pins               | $(V_{\text{audio}} - 5.5\text{V})$ to $(V_{\text{audio}} + 0.3\text{V})$ |
|                    |   | D+, D-, D+/R, D-/L Pins | $(V_{\text{bus}} - 5.5\text{V})$ to $(V_{\text{bus}} + 0.3\text{V})$     |
| $A_{\text{Sel}}$   | Control Input Voltage <sup>(3)</sup>                          | -0.5V to + 6.0V         |  |
|                    | Input Clamp Diode Current                                     | - 50mA                  |  |
|                    | Switch I/O Current (Continuous)                               | USB                     | 50mA   |
|                    |   | Audio                   | 250mA  |
|                    | Peak Switch Current (Pulsed at 1mS Duration, <10% Duty Cycle) | USB                     | 100mA  |
|                    |   | Audio                   | 500mA  |
| $T_{\text{STG}}$   | Storage Temperature Range                                     | -65°C to +150°C         |  |
| $T_{\text{J}}$     | Maximum Junction Temperature                                  | +150°C                  |  |
| $T_{\text{L}}$     | Lead Temperature (Soldering, 10 seconds)                      | +260°C                  |  |
| ESD                | Human Body Model (JEDEC: JESD22-A114)                         | I/O to GND              | 8kV  |
|                    |   | All Other Pins          | 2kV  |
|                    | Charge Discharge Model (JEDEC-JESD-C101)                      | 2kV                     |  |

**Notes:**

3. The input and output negative ratings may be exceeded if the input and output diode current ratings are observed.

### Recommended Operating Conditions<sup>(4)</sup>

| Symbol               | Parameter                     | Conditions   |                       |
|----------------------|-------------------------------|--|-----------------------|
| $V_{\text{Audio}}$   | Supply Voltage                | 2.7V to 4.3V   |                       |
| $V_{\text{bus}}$     | Supply Voltage                | 4.25V to 5.5V  |                       |
| $A_{\text{Sel}}$     | Control Input Voltage         | 0V to $V_{\text{Audio}}$                                 |                       |
| $V_{\text{SW}}$      | Switch I/O Voltage            | $(V_{\text{Audio}} - 5.5\text{V})$ to $V_{\text{Audio}}$ |                       |
| $T_{\text{A}}$       | Operating Temperature         | -40°C to 85°C  |                       |
| $\theta_{\text{JA}}$ | Thermal Resistance (free air) | MicroPak 10L package                                     | 330°C / W (estimated) |

**Notes:**

4. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding or designing to Absolute Max Ratings.

PRELIMINARY

## DC Electrical Characteristics

All typical values are @ 25°C unless otherwise specified.

| Symbol                   | Parameter   | V <sub>Audio</sub><br>(V)                  | Conditions  | T <sub>A</sub> = - 40°C to +85°C |      |                    | Unit |

| R <sub>FLAT(Audio)</sub> | Audio R <sub>ON</sub> <sup>(6)</sup><br>Flatness        | 2.7  | V <sub>L/R</sub> = -2V, 0V, 0.7V, 2V, 2.7V<br>I <sub>ON</sub> = -100mA  |                                  |      | 0.35               | Ω    |

**Notes:**

5.  $\Delta R_{ON} = R_{ON \max} - R_{ON \min}$  measured at identical V<sub>cc</sub>, temperature, and voltage. Worst-case signal path, audio or USB channel, is characterized.
6. Flatness is defined as the difference between the maximum and minimum values of on resistance over the specified range of conditions.
7. Guaranteed by characterization, not production tested.
8. On resistance is determined by the voltage drop between the A and B pins at the indicated current through the switch.

### DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

### PRODUCT STATUS DEFINITIONS

#### Definition of Terms

| Datasheet Identification | Product Status         | Definition   |
|--------------------------|------------------------|--|
| Advance Information      | Formative or In Design | This datasheet contains the design specifications for product development. Specifications may change in any manner without notice.   |
| Preliminary              | First Production       | This datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design. |
| No Identification Needed | Full Production        | This datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.   |
| Obsolete                 | Not In Production      | This datasheet contains specifications on a product that has been discontinued by Fairchild Semiconductor. The datasheet is printed for reference information only.                                      |
