

## Features

- Efficiency up to 96%, Non isolated, no need for heatsinks
- Pin-out compatible with LM78XX Linears
- Low profile (L\*W\*H=11.5\*8.5\*17.5mm)
- High voltage input range, up to 72V
- Short circuit protection, Thermal shutdown
- Non standard outputs available as specials between 3.3V~24V
- Low ripple and noise
- "L" version with 90° pins
- See Positive to Negative Converter Application Note for use as a voltage inverter (alternative to LM79xx Linear)

### Description

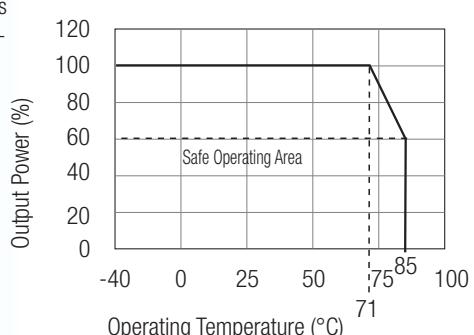

The R-78HBxx-Series high efficiency, high input voltage switching regulators are ideally suited to replace 78xx linear regulators and are pin compatible. The efficiency of up to 96% means that very little energy is wasted as heat so there is no need for any heat sinks with their additional space and mounting costs.

An input voltage range of up to 8:1 is unsurpassed by any other converter and allows the full stored energy utilisation of standard and high voltage batteries. The fully protected output is ideal for industrial applications (especially for industry standard 24VDC bus supplies) and the L-Version with 90° pins allows direct replacement for laid-flat regulators where component height is at a premium. Low ripple and noise figures and a short circuit input current of typically only 15mA round off the specifications of this versatile converter series.

Typical applications include telecommunication, automotive, industrial, aerospace and battery powered applications.

**Standard Application Circuit**

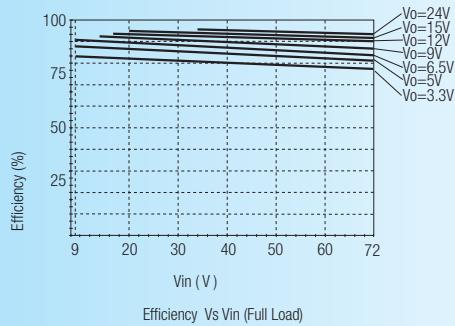

The converter has a built in soft start circuit. Rapidly changing the input voltage from  $V_{in(\min)} \leftrightarrow V_{in(\max)}$  can bypass this circuit and damage the converter.

Add a blocking diode to Vout if current can flow backwards into the output, as this can damage the converter.

## Typical Application

### High Input Voltage Multiple Output Supply

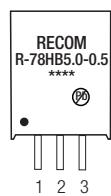

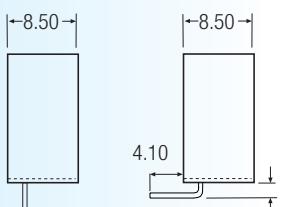

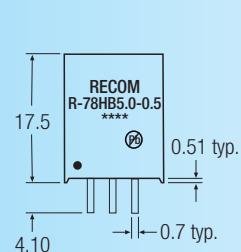

- Wide input range 18V to 72V - can be used with 24V, 48V or 60V batteries
- +12V output for interface and display electronics
- +5V high current output for digital electronics
- Further decoupling filtering may be necessary between the converters
