STM1403

3V FIPS-140 Security Supervisor with Battery Switchover

DATA BRIEFING

FEATURES*

- STM1403 SUPPORTS FIPS-140 SECURITY LEVEL 3+
  - 4 High-Impedance Physical Tamper Inputs
  - Over/Under Operating Voltage Detector
  - Security Alarm ($\overline{SAL}$) on Tamper Detection
- SUPERVISORY FUNCTIONS
  - Automatic Battery Switchover
  - $\overline{RST}$ Output (Open Drain)
  - Manual (Push-button) Reset Input ($\overline{MR}$)
  - Power-fail Comparator (PFI/$\overline{PFO}$)
- $\overline{Vccsw}$ (V_{CC} SWITCH OUTPUT)
  - Low When Switched to V_{CC}
  - High When Switched to V_{BAT} (BATT ON Indicator)
- BATTERY LOW VOLTAGE DETECTOR (POWER-UP)
- OPTIONAL V_{REF} (1.237V)
  (Available for STM1403A only)
- LOW BATTERY SUPPLY CURRENT (2.8µA, typ)
- SECURE LOW PROFILE 16-PIN, 3x3mm, QFN PACKAGE

Figure 1. Package

QFN16, 3mm x 3mm (Q)

Table 1. Device Options

	STM704 Functions(1)	Physical Tamper Inputs	Over/Under Voltage Alarms	Over/Under Temperature Alarms	V_{REF} (1.237V) Option	V_{OUT} Status, During Alarm	$\overline{Vccsw}$ Status, During Alarm
STM1403A	✔	✔	✔		✔	ON	Normal Mode(2)
STM1403B	✔	✔	✔		Note 3	High-Z	High
STM1403C	✔	✔	✔		Note 3	Ground	High

Note: 1. $\overline{SAL}$, $\overline{RST}$, $\overline{PFO}$, and $\overline{BLD}$ are Open Drain.
2. Normal Mode: Low when V_{OUT} is internally switched to V_{CC} and High when V_{OUT} is internally switched to battery.
3. Pin 9 is the V_{REF} pin for STM1403A. It is the V_{TPU} pin for STM1403B/C.

* Contact local ST sales office for the full datasheet.

SUMMARY DESCRIPTION

The STM1403 family of security supervisors are a low power family of intrusion (tamper) detection chips targeted at manufacturers of POS terminals and other systems, to enable them to meet **physical and/or environmental** intrusion monitoring requirements as mandated by various standards, such as Federal Information Processing Standards (FIPS) Pub 140 entitled “Security Requirements for Cryptographic Modules,” published by the National Institute of Standards and Technology, U.S. Department of Commerce), EMVCo, ISO, ZKA, and VISA PED. STM1403 supports target levels 3 and lower

The STM1403 includes Automatic Battery Switchover, $\overline{RST}$ Output (Open Drain), Manual (Push-button) Reset Input ($\overline{MR}$), Power-fail Comparator (PFI/$\overline{PFO}$), Physical and/or Environmental Tamper Detect/Security Alarm, and Battery Low Voltage Detect features.

The STM1403A also offers a V_{REF} (1.237V) as an option on pin 9. On the STM1403B/C, this pin is V_{TPU} (internally switched V_{CC} or V_{BAT}).

V_{OUT} Pin Modes

The STM1403 is available in three versions, corresponding to three modes of the V_{OUT} pin (Supply Voltage Out), when the $\overline{SAL}$ (Security Alarm) is asserted (active-low) upon tamper detection:

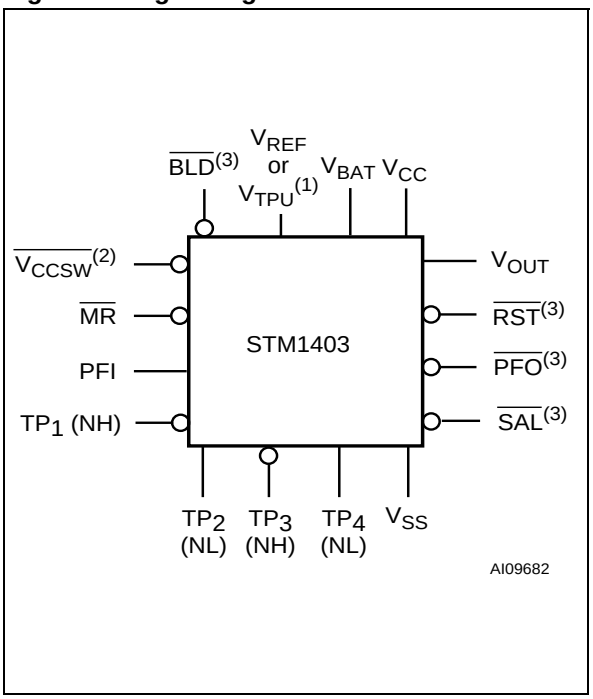
STM1403A. V_{OUT} stays ON (at V_{CC} or V_{BAT}) when $\overline{SAL}$ is driven low (activated).

STM1403B. V_{OUT} is set to High-Z when $\overline{SAL}$ is driven low (activated).

STM1403C. V_{OUT} is driven to Ground when $\overline{SAL}$ is activated (may be used when V_{OUT} is connected directly to the V_{CC} pin of the external SRAM that holds the cryptographic codes).

All variants (see Table 1., Device Options) are pin-compatible and available in a security-friendly, low profile, 16-pin QFN package.

Figure 2. Logic Diagram



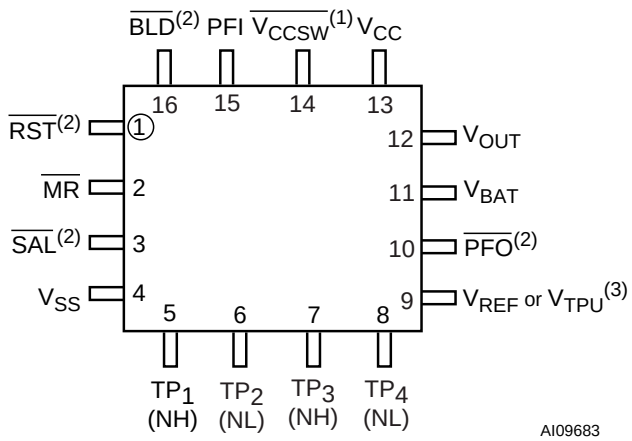
Note: 1. V_{REF} only for STM1403A; V_{TPU} for STM1403B/C.
2. Normal Mode: Low when V_{OUT} is internally switched to V_{CC} and High when V_{OUT} is internally switched to battery.
3. $\overline{SAL}$, $\overline{RST}$, $\overline{PFO}$, and $\overline{BLD}$ are Open Drain.

Table 2. Signal Names

$\overline{Vccsw}$(1)	V_{CC} Switch Output
$\overline{MR}$	Manual (Push-button) Reset Input
PFI	Power-fail Input
TP_1 - TP_4	Independent Physical Tamper Detect Pins 1 through 4
V_{OUT}	Supply Voltage Output
$\overline{RST}$(2)	Active-low Reset Output
$\overline{PFO}$(2)	Power-fail Output
$\overline{SAL}$(2)	Security Alarm Output
$\overline{BLD}$(2)	Battery Low Voltage Detect
V_{REF}(3)	1.237V Reference Voltage
V_{TPU}(3)	Tamper Pull-up (V_{CC} or V_{BAT})
V_{BAT}	Back-up Supply Voltage
V_{CC}	Supply Voltage
V_{SS}	Ground

Note: See PIN DESCRIPTIONS, page 9 of the full datasheet for details.
1. Normal Mode: Low when V_{OUT} is internally switched to V_{CC} and High when V_{OUT} is internally switched to battery.
2. $\overline{SAL}$, $\overline{RST}$, $\overline{PFO}$, and $\overline{BLD}$ are Open Drain.
3. V_{REF} only for STM1403A; V_{TPU} for STM1403B/C.

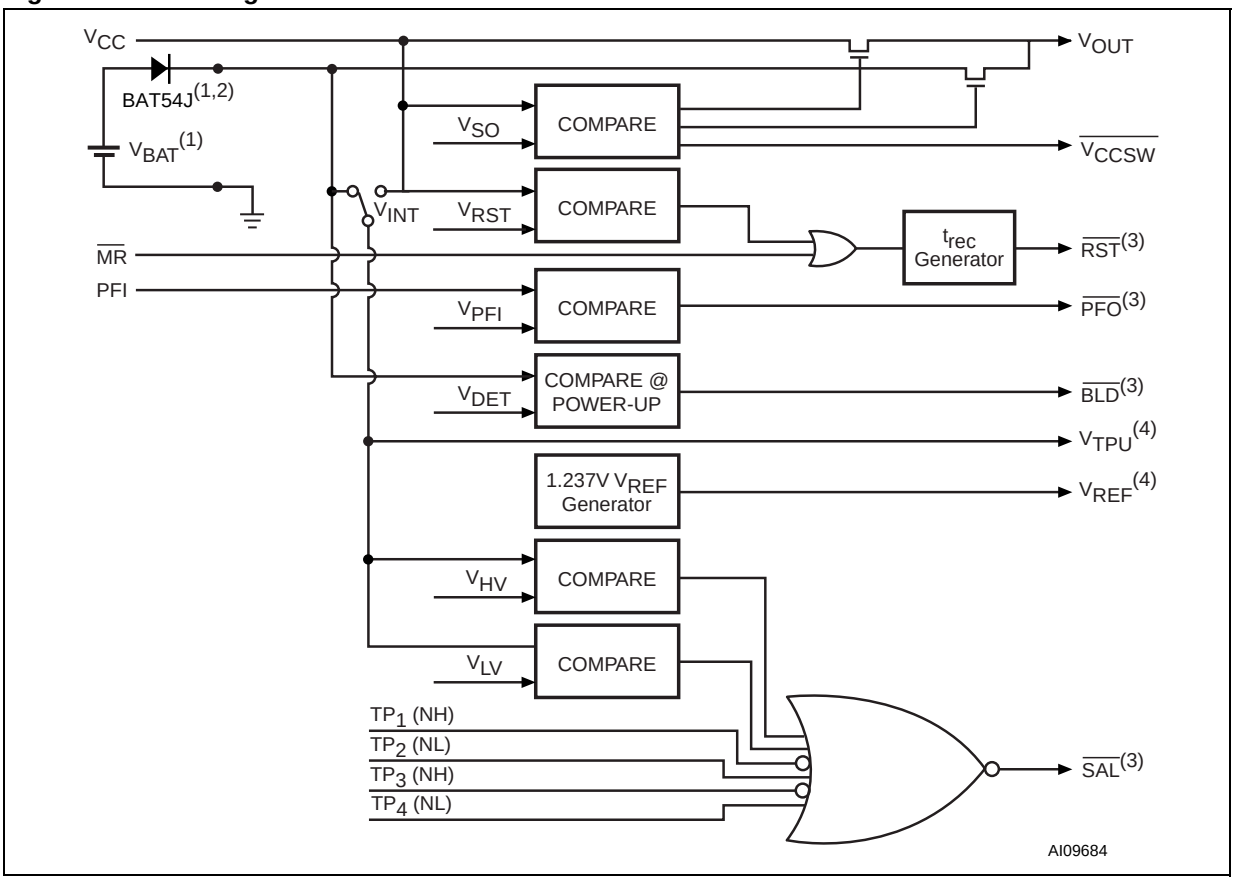
Figure 3. QFN16 Connections



Note: See PIN DESCRIPTIONS, page 9 of the full datasheet for details.

1. Normal Mode: Low when V_{OUT} is internally switched to V_{CC} and High when V_{OUT} is internally switched to battery.
2. $\overline{SAL}$, $\overline{RST}$, $\overline{PFO}$, and $\overline{BLD}$ are Open Drain.
3. V_{REF} only for STM1403A; V_{TPU} for STM1403B/C.

Figure 4. Block Diagram



Note: 1. BAT54J (from STMicroelectronics) recommended.
2. Required for battery-reverse charging protection.
3. Open Drain
4. V_{REF} only for STM1403; V_{TPU} for STM1403B/C.

TAMPER DETECTION

Physical

There are four (4) high-impedance physical tamper detect input pins, 2 normally set to High (NH) and 2 normally set to Low (NL). Each input is designed with a glitch immunity. These inputs can be connected externally to several types of actuator devices (e.g., switches, wire mesh). A tamper on any one of the four inputs that causes its state to change will trigger the security alarm ($\overline{SAL}$) and drive it to active-low. Once the tamper condition no longer exists, the $\overline{SAL}$ will return to its normal High state.

TP_1 and TP_3 are set Normally to High (NH). They are connected externally through a closed switch or a high-impedance resistor to V_{OUT} (in the case of STM1403A) or V_{TPU} (in the case of STM1403B/C), A tamper condition will be detected when the input pin is pulled low. If not used, tie the pin to V_{OUT} or V_{TPU}.

TP_2 and TP_4 are set Normally to Low (NL). They are connected externally through a high-impedance resistor or a closed switch to V_{SS}. A tamper condition will be detected when the input pin is pulled high. If not used, tie the pin to V_{SS}.

Supply Voltage

The internally switched supply voltage, V_{INT} (either V_{CC} input or V_{BAT} input) is continuously monitored. If V_{INT} should exceed the over voltage trip point, V_{HV} (set at 4.2V, typical), or should go below the under voltage trip point, V_{LV} (set at 2.0v, typical). $\overline{SAL}$ will be driven active-low. Once the tamper condition no longer exists, the $\overline{SAL}$ pin will return to its normal High state.

When no tamper condition exists, $\overline{SAL}$ is normally High.

When a tamper is detected, the $\overline{SAL}$ is activated (driven low), independent of the part type. V_{OUT} can be driven to one of three states, depending on which variant of STM1403 is being used (see Device Options, page 1):

- ON;
- High-Z; or
- Ground (V_{SS}).

Note: The STM1403 must be initially powered above V_{RST} to enable the tamper detection alarms. For example, if the battery is on while V_{CC} = 0V, no alarm condition can be detected until V_{CC} rises above V_{RST} (and t_{rec} expires). From this point on, alarms can be detected either on battery or V_{CC}. This is done to avoid false alarms when the device goes from no power to its operational state.

PART NUMBERING

Table 3. Ordering Information Scheme (see Figure 5., page 7 for Marking Information)

Example: STM1403 A T M – Q 6 F

Device Type

STM1403: Physical, Voltage Tamper Detect

V_{OUT} Status ($\overline{SAL}$ = Active-Low)

A: V_{OUT} = ON; $\overline{Vccsw}$ = Normal Mode

B: V_{OUT} = High-Z; $\overline{Vccsw}$ = High

C: V_{OUT} = Ground; $\overline{Vccsw}$ = High

Reset Threshold Voltage

T: V_{RST} = 3.00V to 3.15V

S: V_{RST} = 2.85V to 3.00V

R: V_{RST} = 2.55V to 2.70V

Battery Low Voltage Detect Threshold (V_{DET})

M: V_{DET} = 2.3V (Typ)

N: V_{DET} = 2.5V (Typ)

O: V_{DET} = 3.2V (Typ)

Package

Q = QFN16 (3mm x 3mm)

Temperature Range

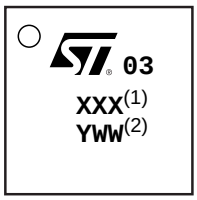
6 = –40 to 85°C

Shipping Method

F = ECOPACK Package, Tape & Reel

For other options, or for more information on any aspect of this device, please contact the ST Sales Office nearest you.

Figure 5. Topside Marking Information



AI11878

Note: 1. Options codes:
X = A, B, or C (for V_{OUT})
X = T, S, or R (for Reset Threshold)
X = M, N, or O (for Battery Low Voltage Detect Threshold)
2. Traceability Codes
Y = Year
WW = Work Week

REVISION HISTORY

Table 4. Document Revision History

Date	Revision	Description
11-October-04	1.0	First Edition
26-Nov-04	1.1	Corrected footprint dimensions; update characteristics (Figure 2, 3, 4, 5, 6, 7, 8, 9, 27, 28, 31; Table 1, 2, 3, 6, 7)
22-Dec-04	1.2	Update characteristics (Figure 5; Table 6, 7, 3)
03-Feb-05	1.3	Update characteristics (Figure 5; Table 6, 7)
25-Feb-05	1.4	Update temperature trip limits (Table 3)
06-May-05	2.0	v2.0 of DB corresponds to v1.5 of DS
05-Aug-05	3.0	v3.0 of DB corresponds to v2.0 of DS
13-Oct-05	4.0	v4.0 of DB corresponds to v3.0 of DS; addition of datasheet availability
