

**1.2V/1.5V, 250MHz, Low Skew  
1:6 Crystal to LVC MOS Clock Buffer**
**Features**

- Six low skew outputs: < 80ps
- Crystal oscillator input: 10MHz to 40MHz
- Switching frequency up to 250 MHz
- Fast output rise/fall time: < 800ps
- Synchronous output enables
- Industrial Temperature range: -40°C to +85°C
- 1.2V and 1.5V operation
- Packaging (Pb-free & Green available):
  - 16-pin 173-mil wide TSSOP (L)

**Description**

Pericom Semiconductor's PI6CL10806 is a low skew six output crystal oscillator drivers. Crystal oscillator input range is from 10MHz to 40MHz. If XTAL\_IN is driven with a signal source, then the input frequency can be as high as 200MHz. PI6CL10806, the outputs are configured into 2 groups: a five output and a single output; each with independent output enable.

PI6CL10806 has a wide range of operating voltages: 1.2V and 1.5V. This feature paired with the low output-to-output and part-to-part skew makes the device ideal for low voltage, low power, high frequency single ended applications; such as networking

**Note:**

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

**Crystal circuit connection**

The following diagram shows PI6CL10806 crystal circuit connection with a parallel resonant crystal. For the  $C_L=18\text{pF}$  crystal, it is suggested to use  $C_1=15\text{pF}$ ,  $C_2=20\text{pF}$ .  $C_1$  and  $C_2$  can be adjusted to fine tune to the target ppm of crystal oscillation according to different board layouts.  $R_1=100\Omega$  is strongly suggested.
