

UTC CD4069

CMOS IC

INVERTER CIRCUITS

DESCRIPTION

The UTC CD4069 consists of six inverter circuits and is manufactured using complementary MOS (CMOS) to achieve wide power supply operating range, low power consumption, high noise immunity, and symmetric controlled rise and fall times.

All inputs are protected from damage due to static discharge by diode clamps to VDD and VSS.

FEATURES

- * Wide supply voltage range: 3.0V ~ 15V.
- * High noise immunity: 0.45 V_{DD} typ.
- * Low Power TTL compatibility: Fan out of 2 driving 74L or 1 driving 74LS.

*AC Parameters are guaranteed by DC correlated testing.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed.

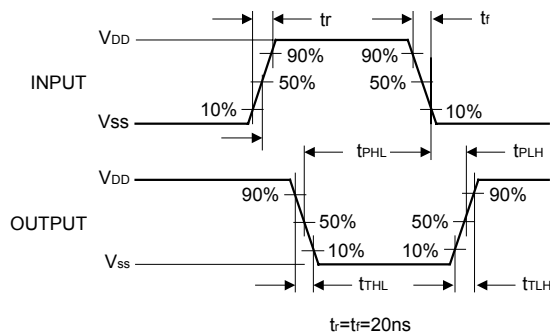

They are not meant to imply that the devices should be operated at these limits. The table of "Recommended Operating Conditions" and "Electrical Characteristics" provides conditions for actual device operation.

Note 2: $V_{SS}=0\text{V}$ unless otherwise specified.

Note 3: I_{OH} and I_{OL} are tested one output at a time.

Note 4: C_{PD} determines the no load AC power consumption of any CMOS device.
