

1.2A Dual High-Speed MOSFET Drivers

Features

- Low Cost
- Latch-Up Protected: Will Withstand 500mA Reverse Output Current
- ESD Protected $\pm 2kV$
- High Peak Output Current: 1.2A
- Wide Operating Range
 - 4.5V to 16V
- High Capacitive Load Drive Capability: 1000pF in 38nsec
- Low Delay Time: 75nsec Max
- Logic Input Threshold Independent of Supply Voltage
- Output Voltage Swing to Within 25mV of Ground or V_{DD}
- Low Output Impedance: 8Ω

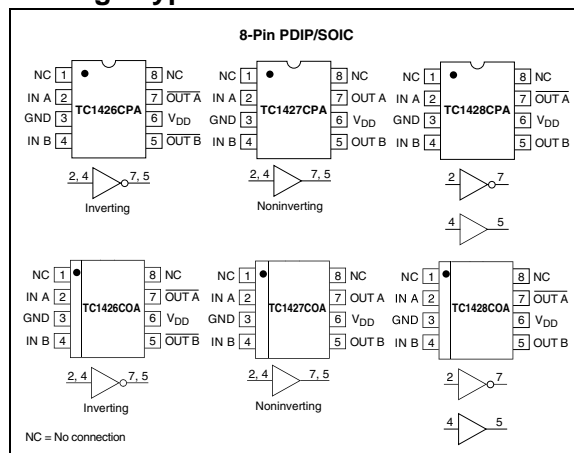

Applications

- Power MOSFET Drivers
- Switched Mode Power Supplies
- Pulse Transformer Drive
- Small Motor Controls
- Print Head Drive

Device Selection Table

| Part Number | Package | Temp. Range |
|-------------|------------|--------------|
| TC1426COA | 8-Pin SOIC | 0°C to +70°C |
| TC1426CPA | 8-Pin PDIP | 0°C to +70°C |
| TC1427COA | 8-Pin SOIC | 0°C to +70°C |
| TC1427CPA | 8-Pin PDIP | 0°C to +70°C |
| TC1428COA | 8-Pin SOIC | 0°C to +70°C |
| TC1428CPA | 8-Pin PDIP | 0°C to +70°C |

Package Type

General Description

The TC1426/TC1427/TC1428 are a family of 1.2A dual high-speed drivers. CMOS fabrication is used for low power consumption and high efficiency.

These devices are fabricated using an epitaxial layer to effectively short out the intrinsic parasitic transistor responsible for CMOS latch-up. They incorporate a number of other design and process refinements to increase their long-term reliability.

The TC1426 is compatible with the bipolar DS0026, but only draws 1/5 of the quiescent current. The TC1426/TC1427/TC1428 are also compatible with the TC426/TC427/TC428, but with 1.2A peak output current rather than the 1.5A of the TC426/TC427/TC428 devices.

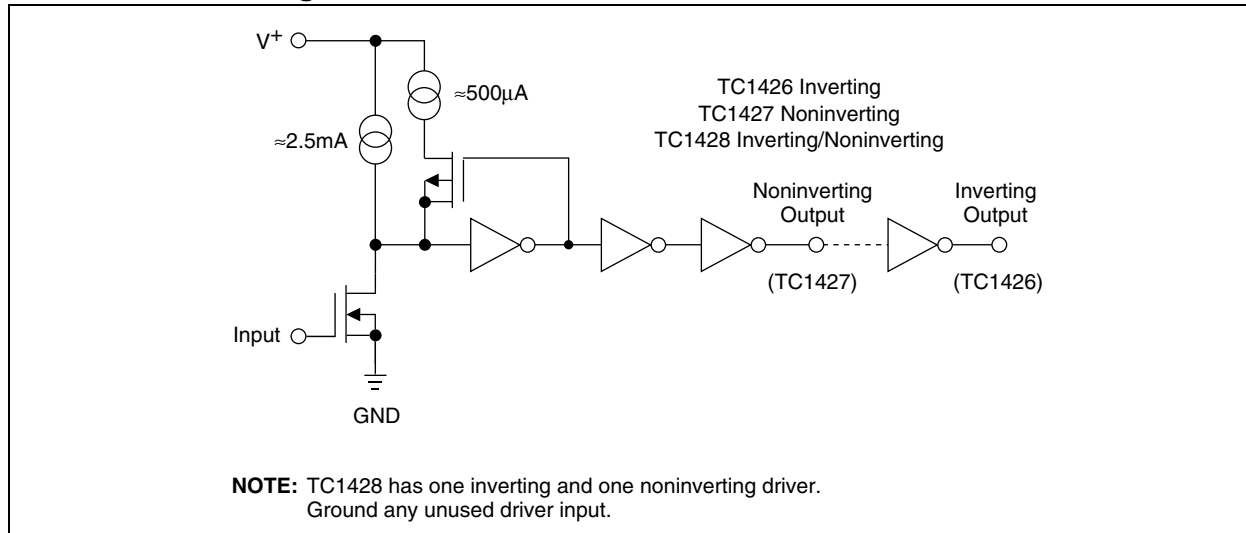

Other compatible drivers are the TC4426/TC4427/TC4428 and the TC4426A/TC4427A/TC4428A. The TC4426/TC4427/TC4428 have the added feature that the inputs can withstand negative voltage up to 5V with diode protection circuits. The TC4426A/TC4427A/TC4428A have matched input to output leading edge and falling edge delays, t_{D1} and t_{D2} , for processing short duration pulses in the 25 nanoseconds range. All of the above drivers are pin compatible.

The high-input impedance TC1426/TC1427/TC1428 drivers are CMOS/TTL input-compatible, do not require the speed-up needed by the bipolar devices, and can be directly driven by most PWM ICs.

This family of devices is available in inverting and non-inverting versions. Specifications have been optimized to achieve low-cost and high-performance devices, well-suited for the high-volume manufacturer.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings*

| | |
|---|-----------------------------------|
| Supply Voltage..... | +18V |
| Input Voltage, Any Terminal | $V_{DD} + 0.3V$ to $GND - 0.3V$ |
| Power Dissipation ($T_A \leq 70^\circ C$) | |
| PDIP..... | 730mW |
| SOIC..... | 470mW |
| Derating Factor | |
| PDIP..... | 8mW/ $^\circ C$ |
| SOIC..... | 4mW/ $^\circ C$ |
| Operating Temperature Range | |
| C Version..... | 0 $^\circ C$ to +70 $^\circ C$ |
| Storage Temperature Range | -65 $^\circ C$ to +150 $^\circ C$ |

*Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

TC1426/TC1427/TC1428 ELECTRICAL SPECIFICATIONS

| Electrical Characteristics: $T_A = +25^\circ C$, with $4.5V \leq V_{DD} \leq 16V$, unless otherwise noted. | | | | | | |
|--|---|------------------|---------|----------|----------|--|
| Symbol | Parameter | Min | Typ | Max | Units | Test Conditions |

2.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 2-1.

TABLE 2-1: PIN FUNCTION TABLE

| Pin No. (8-Pin PDIP, SOIC) | Symbol | Description |
|----------------------------------|-----------------|---|
| 1 | NC | No connection. |
| 2 | IN A | Control input A, TTL/CMOS compatible logic input. |
| 3 | GND | Ground. |
| 4 | IN B | Control input B, TTL/CMOS compatible logic input. |
| 5 | OUT B | Output B, CMOS totem-pole output. |
| 6 | V _{DD} | Supply input, 4.5V to 16V. |
| 7 | OUT A | Output A, CMOS totem-pole output. |
| 8 | NC | No connection. |

TC1426/TC1427/TC1428

3.0 APPLICATIONS INFORMATION

3.1 SUPPLY BYPASSING

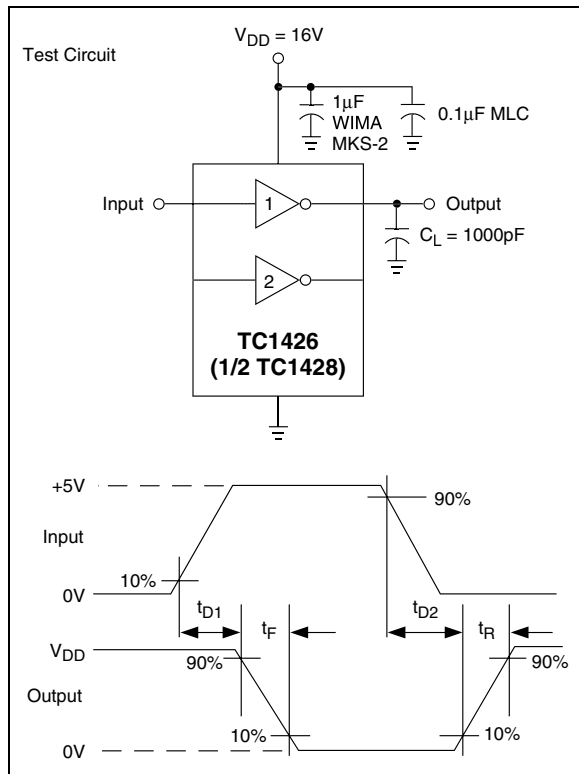

Large currents are required to charge and discharge capacitive loads quickly. For example, charging a 1000pF load to 16V in 25nsec requires a 0.8A current from the device's power supply.

To guarantee low supply impedance over a wide frequency range, a parallel capacitor combination is recommended for supply bypassing. Low-inductance ceramic MLC capacitors with short lead lengths (<0.5-in.) should be used. A 1.0μF film capacitor in parallel with one or two 0.1μF ceramic MLC capacitors normally provides adequate bypassing.

3.2 GROUNDING

The TC1426 and TC1428 contain inverting drivers. Individual ground returns for the input and output circuits or a ground plane should be used. This will reduce negative feedback that causes degradation in switching speed characteristics.

FIGURE 3-1: INVERTING DRIVER SWITCHING TIME

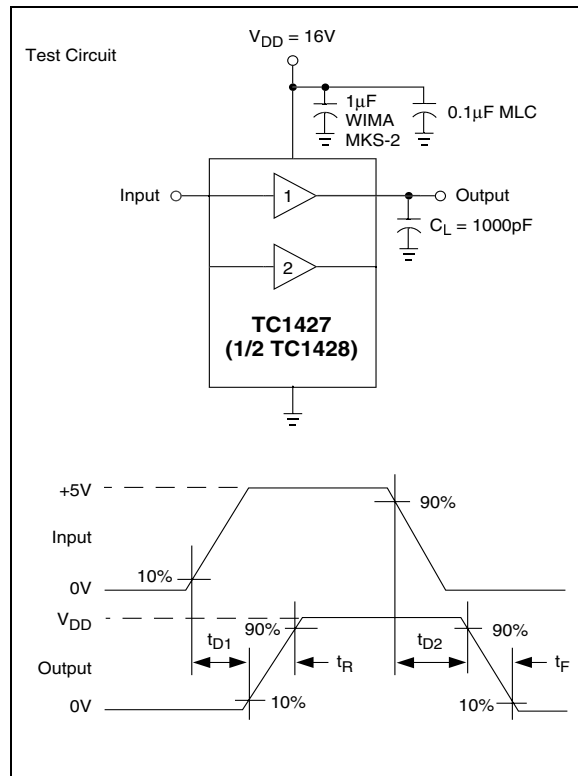

3.3 INPUT STAGE

The input voltage level changes the no-load or quiescent supply current. The N-channel MOSFET input stage transistor drives a 2.5mA current source load. With a logic "1" input, the maximum quiescent supply current is 9mA. Logic "0" input level signals reduce quiescent current to 500μA maximum. **Unused driver inputs must be connected to VDD or GND.** Minimum power dissipation occurs for logic "0" inputs for the TC1426/TC1427/TC1428.

The drivers are designed with 100mV of hysteresis. This provides clean transitions and minimizes output stage current spiking when changing states. Input voltage thresholds are approximately 1.5V, making a logic "1" input any voltage greater than 1.5V up to VDD. Input current is less than 1μA over this range.

The TC1426/TC1427/TC1428 may be directly driven by the TL494, SG1526/27, TC38C42, TC170 and similar switch-mode power supply integrated circuits.

NOTES:

Sales and Support

Data Sheets

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
3. The Microchip Worldwide Site (www.microchip.com)

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

Microchip received QS-9000 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona in July 1999 and Mountain View, California in March 2002. The Company's quality system processes and procedures are QS-9000 compliant for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, non-volatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001 certified.
