

# MC-22243A-X

# MCP (MULTI-CHIP PACKAGE) FLASH MEMORY AND SRAM 32M-BIT FLASH MEMORY AND 4M-BIT SRAM

#### **Description**

The MC-222243A-X is a stacked type MCP (Multi-Chip Package) of 33,554,432 bits (BYTE mode: 4,194,304 words by 8 bits, WORD mode: 2,097,152 words by 16 bits) flash memory and 4,194,304 bits (BYTE mode: 524,288 words by 8 bits, WORD mode: 262,144 words by 16 bits) static RAM.

The MC-222243A-X is packaged in a 77-pin TAPE FBGA.

#### **Features**

#### **General Features**

- Fast access time: tacc = 85 ns (MAX.) (Flash Memory), taa = 70 ns (MAX.) (SRAM)
- Supply voltage: Vccf / Vccs = 2.7 to 3.6 V
- Wide operating temperature :  $T_A = -25$  to  $+85^{\circ}C$

#### **Flash Memory Features**

- Two bank organization enabling simultaneous execution of erase / program and read
- Bank organization: 2 banks (8M bits + 24M bits)
- Memory organization: 4,194,304 words × 8 bits (BYTE mode)
   2,097,152 words × 16 bits (WORD mode)
- Sector organization : 71 sectors (8K bytes / 4K words × 8 sectors, 64K bytes / 32K words × 63 sectors)
- Boot sector allocated to the highest address (sector)
- 3-state output
- Automatic program
  - Program suspend / resume
- Unlock bypass program
- Automatic erase
  - Chip erase
  - Sector erase (sectors can be combined freely)
  - Erase suspend / resume
- Program / Erase completion detection
  - Detection through data polling and toggle bits
  - Detection through RY (/BY) pin
- Sector group protection
  - Any sector can be protected
  - Any protected sector can be temporary unprotected
- Sectors can be used for boot application
- Hardware reset and standby using /RESET pin
- Automatic sleep mode
- Boot block sector protect by /WP (ACC) pin
- Conforms to common flash memory interface (CFI)
- Extra One Time Protect Sector provided

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.

Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

#### **SRAM Features**

ullet Memory organization : 524,288 words imes 8 bits (BYTE mode)

262,144 words × 16 bits (WORD mode)

• Supply current : At operating : 40 mA (MAX.) At standby : 7  $\mu$ A (MAX.)

• Two Chip Enable inputs : /CE1s, CE2s

Byte data control : /LB, /UBByte data select : CIOs

• Low Vcc data retention : 1.0 to 3.6 V

## **Ordering Information**

| Part number           | Flash Memory             | Flash Memory | SRAM        | Package                   |
|-----------------------|--------------------------|--------------|-------------|---------------------------|
|                       | Boot sector              | Access time  | Access time |                           |
|                       |                          | ns (MAX.)    | ns (MAX.)   |                           |
| MC-222243AF9-B85X-BT3 | Highest address (sector) | 85           | 70          | 77-pin TAPE FBGA (12 × 7) |
|                       | (T type)                 |              |             |                           |

#### **Pin Configuration**

/xxx indicates active low signal.

#### 77-pin TAPE FBGA (12×7)

#### **Common Pins**

#### **Flash Memory Pins**

A0 - A17 : Address inputs A18 - A20 : Address inputs

I/O0 - I/O15 : Data inputs / outputs I/O15, A-1 : Data inputs / outputs 15 (WORD mode)

/OE : Output Enable LSB address input (BYTE mode)

/WE : Write Enable /CEf : Chip Enable

Vss : Ground RY (/BY) : Ready (Busy) output NC No Connection /RESET : Hardware reset input

Vccf : Supply Voltage

/WP(ACC) : Hardware Write Protect (Acceleration)

CIOf : Selects 8-bit or 16-bit mode

**SRAM Pins** 

SA : Address input (A18 for SRAM)

/CE1s : Chip Enable 1
CE2s : Chip Enable 2
Vccs : Supply Voltage
/LB, /UB : Byte data select

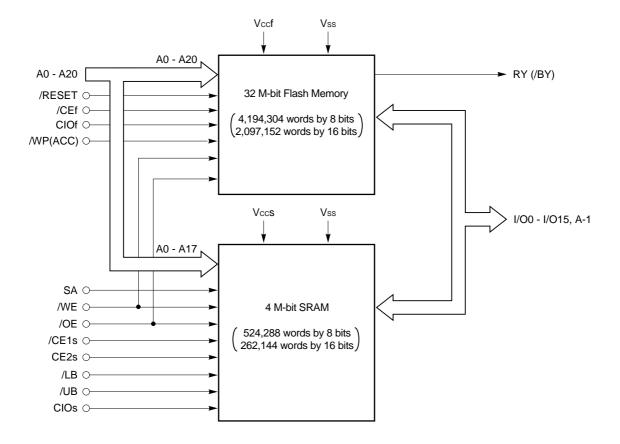

CIOs : Selects 8-bit or 16-bit mode

**Note** Some signals can be applied because this pin is not internally connected.

Remark Refer to Package Drawing for the index mark.

#### **Block Diagram**

|                 |                |        |       |        |          |       |      | Н      | L   |      |        |     | Hi-Z        | Data In     |  |  |

Caution Other operations except for indicated in this table are inhibited.

**Notes 1.** When  $/OE = V_{IL}$ ,  $V_{IL}$  can be applied to /WE. When  $/OE = V_{IH}$ , a write operation is started.

- 2. SRAM should be Standby.
- 3. Flash Memory should be Standby or Hardware reset.

Remarks 1.  $H: V_{IH}, L: V_{IL}, \times: V_{IH} \text{ or } V_{IL}$ 

- 2. Sector group protection and read the product ID are using a command.
- 3. Refer to DUAL OPERATION FLASH MEMORY 32M BITS A SERIES Information (M14914E) for the flash memory bus operations.

- Notes 1. Both these read / reset commands reset the device to the read mode.
  - **2.** Programming is suspended if B0H is input to the bank address being programmed to in a program operation.
  - **3.** Programming is resumed if 30H is input to the bank address being suspended to in a program-suspend operation.
  - 4. Erasure is suspended if B0H is input to the bank address being erased in a sector erase operation.
  - **5.** Erasure is resumed if 30H is input to the bank address being suspended in a sector-erase-suspend operation.
  - **6.** Valid only in the unlock bypass mode.
  - 7. Valid only when /RESET = VID (except in the Extra One Time Protect Sector mode).
  - **8.** The command sequence that protects a sector group is excluded.
  - 9. Only A0 to A6 are valid as an address.
  - 10. Valid only in the Extra One Time Protect Sector mode.
  - 11. This command can be used even if this data is F0H.
- **Remarks 1.** Specify address 555H or 2AAH (A10 to A0) in the WORD mode, and AAAH or 555H (A10 to A0, A-1) in the BYTE mode.
  - 2. RA: Read address
    - RD: Read data
    - IA : Address input
      - xx00H (to read the manufacturer code)
      - xx02H (to read the device code in the BYTE mode)
      - xx01H (to read the device code in the WORD mode)
    - ID : Code output. Refer to the Product ID code (Manufacturer code / Device code) (Flash Memory).
    - PA: Program address
    - PD: Program data
    - FSA: Erase sector address. The sector to be erased is selected by the combination of this address. Refer to the **Sector Organization / Sector Address Table (Flash Memory)**.
    - BA: Bank address. Refer to the Sector Organization / Sector Address Table (Flash Memory).
    - SPA: Sector group address to be protected. Set sector group address (SGA) and (A6, A1, A0) = (VIL, VIH, VIL). For the sector group address, refer to the **Sector Group Address Table (Flash Memory)**.
    - SUA: Unprotect sector group address. Set sector group address (SGA) and (A6, A1, A0) = (Vih, Vih, Vil). For the sector group address, refer to the **Sector Group Address Table (Flash Memory)**.
    - SD: Data for verifying whether sector groups read from the address specified by SPA, SUA, and EOTPSA are protected.
    - EOTPSA: Extra One Time Protect Sector area addresses.
      - BYTE mode: 3F0000H to 3FFFFFH, WORD mode: 1F8000H to 1FFFFFH
  - 3. The sector group address is don't care except when a program / erase address or read address are selected.
  - 4. For the operation of the bus, refer to Bus Operations Table.
  - **5.**  $\times$  of address bit indicates ViH or ViL.
- 6. Refer to DUAL OPERATION FLASH MEMORY 32M BITS A SERIES Information (M14914E) for the flash memory commands.

#### Product ID Code (Manufacturer Code / Device Code) (Flash Memory)

| Product ID Code   |    | Address inputs |    | Output            |

**★** Hardware Sequence Flags, Hardware Data Protection (Flash Memory)

Refer to DUAL OPERATION FLASH MEMORY 32M BITS A SERIES Information (M14914E).

#### **Electrical Specifications**

Before turning on power, input Vss  $\pm$  0.2 V to the /RESET pin until Vccf  $\geq$  Vccf (MIN.).

## **Absolute Maximum Ratings**

| Parameter              | Symbol           |              | Condition               | Rating  | Unit |
|------------------------|------------------|--------------|-------------------------|---|------|
| Supply voltage         | Vccf, Vccs       | with respect | to Vss                  | -0.5 to +4.0  | V    |
| Input / Output voltage | VT               | with respect | /WP(ACC), /RESET        | -0.5 Note 1 to +13.0                                | V    |
|                        |                  | to Vss       | except /WP(ACC), /RESET | -0.5 Note 1 to Vccf, Vccs + 0.4 (4.0 V MAX.) Note 2 |      |
| Ambient operation      | TA               |              |                         | -25 to +85  | °C   |
| temperature            |                  |              |                         |   |      |
| Storage temperature    | T <sub>stg</sub> |              |                         | -55 to +125   | °C   |

**Notes 1.** -2.0 V (MIN.) (pulse width  $\leq 20 \text{ ns}$ )

2. Vccf, Vccs + 0.5 V (MAX.) (pulse width  $\leq$  20 ns)

Caution Exposing the device to stress above those listed in Absolute Maximum Rating could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

#### **Recommended Operating Conditions**

| Parameter                     | Symbol     | Condition | MIN. | TYP. | MAX. | Unit |
|-------------------------------|------------|-----------|------|------|------|------|
| Supply voltage                | Vccf, Vccs |           | 2.7  |      | 3.6  | V    |
| Ambient operation temperature | TA         |           | -25  |      | +85  | °C   |

#### **DC Characteristics (Recommended Operating Conditions Unless Otherwise Noted)**

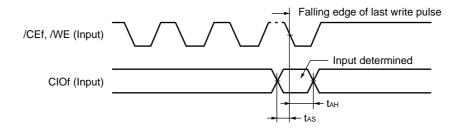

Figure 17. BYTE mode Switching Timing Chart (Flash Memory)

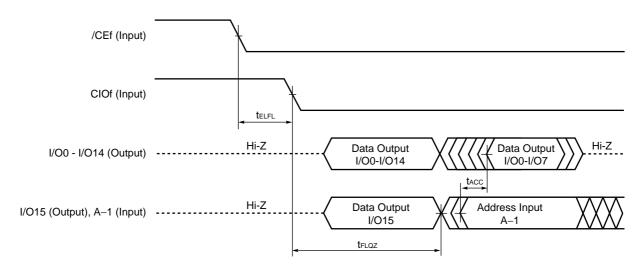

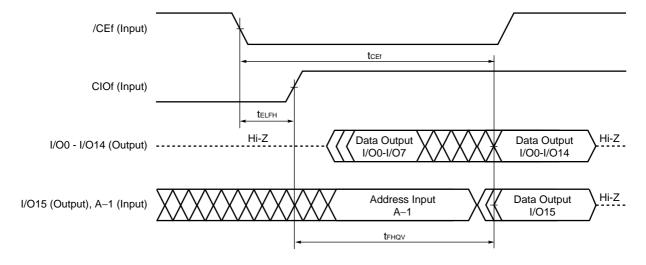

Figure 18. WORD mode Switching Timing Chart (Flash Memory)

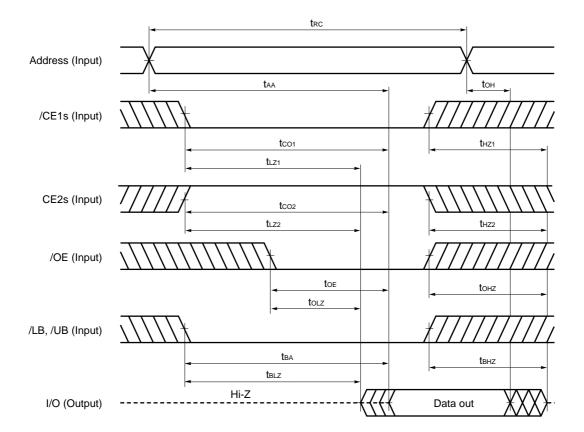

Figure 19. Read Cycle Timing Chart (SRAM)

**Remark** In read cycle, /WE should be fixed to high level.

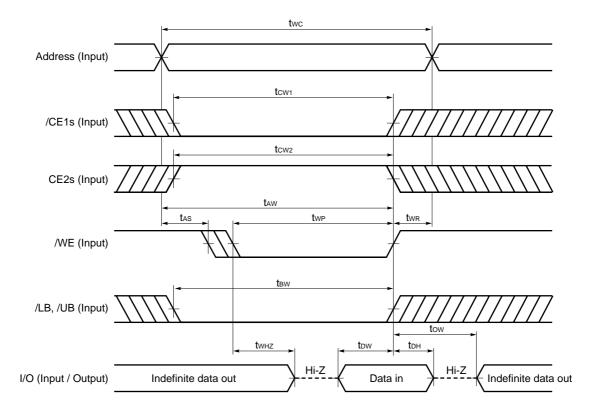

Figure 20. Write Cycle Timing Chart 1 (/WE Controlled) (SRAM)

- Cautions 1. During address transition, at least one of pins /CE1s, CE2s, /WE should be inactivated.
  - 2. Do not input data to the I/O pins while they are in the output state.
- **Remarks 1.** Write operation is done during the overlap time of a low level /CE1s, /WE, /LB and/or /UB, and a high level CE2s.
  - 2. If /CE1s changes to low level at the same time or after the change of /WE to low level, or if CE2s changes to high level at the same time or after the change of /WE to low level, the I/O pins will remain Hi-Z state.
  - 3. When /WE is at low level, the I/O pins are always Hi-Z. When /WE is at high level, read operation is executed. Therefore /OE should be at high level to make the I/O pins Hi-Z.

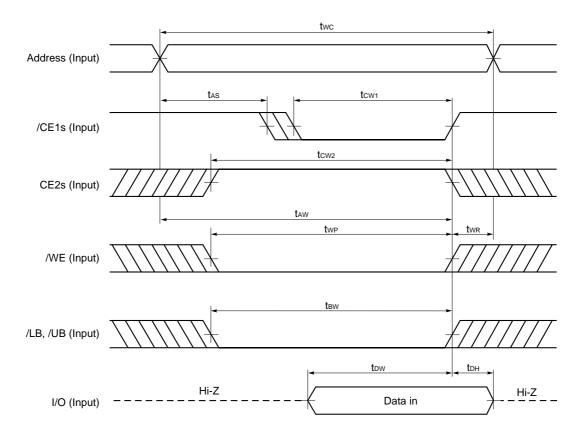

Figure 21. Write Cycle Timing Chart 2 (/CE1s Controlled) (SRAM)

- Cautions 1. During address transition, at least one of pins /CE1s, CE2s, /WE should be inactivated.
  - 2. Do not input data to the I/O pins while they are in the output state.

**Remark** Write operation is done during the overlap time of a low level /CE1s, /WE, /LB and/or /UB, and a high level CE2s.

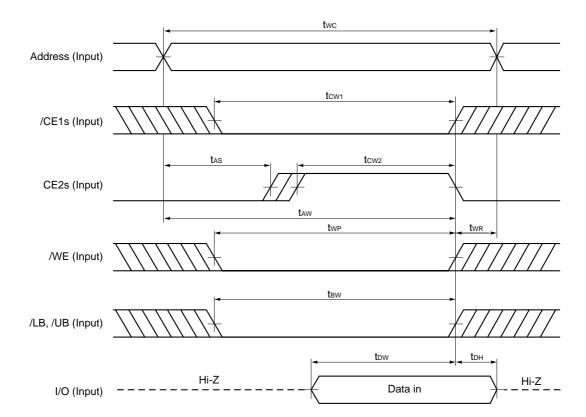

Figure 22. Write Cycle Timing Chart 3 (CE2s Controlled) (SRAM)

Cautions 1. During address transition, at least one of pins /CE1s, CE2s, /WE should be inactivated.

2. Do not input data to the I/O pins while they are in the output state.

**Remark** Write operation is done during the overlap time of a low level /CE1s, /WE, /LB and/or /UB, and a high level CE2s.

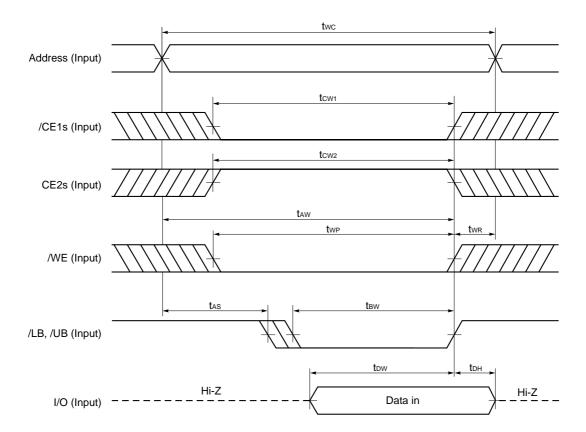

Figure 23. Write Cycle Timing Chart 4 (/LB, /UB Controlled) (SRAM)

- Cautions 1. During address transition, at least one of pins /CE1s, CE2s, /WE should be inactivated.
  - 2. Do not input data to the I/O pins while they are in the output state.

**Remark** Write operation is done during the overlap time of a low level /CE1s, /WE, /LB and/or /UB, and a high level CE2s.

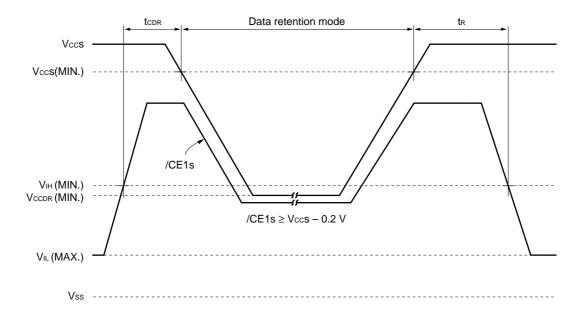

Figure 24. Data Retention Timing Chart 1 (/CE1s Controlled) (SRAM)

**Remark** On the data retention mode by controlling /CE1s, the input level of CE2s must be  $\geq$  Vccs - 0.2 V or  $\leq$  0.2 V. The other pins (Address, I/O, /WE, /OE, /LB, /UB) can be in Hi-Z state.

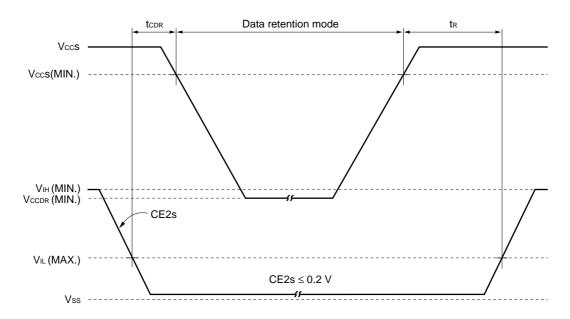

Figure 25. Data Retention Timing Chart 2 (CE2s Controlled) (SRAM)

**Remark** On the data retention mode controlling CE2s, the other pins (/CE1s, Address, I/O, /WE, /OE, /LB, /UB) can be in Hi-Z state.

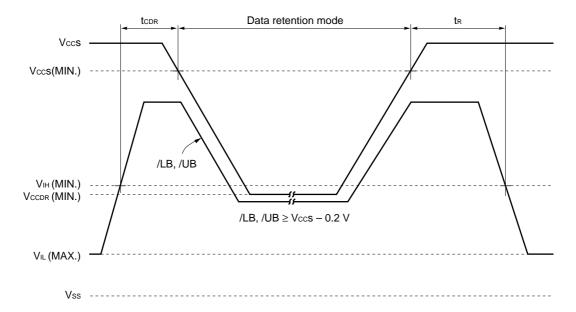

Figure 26. Data Retention Timing Chart 3 (/LB, /UB Controlled) (SRAM)

**Remark** On the data retention mode by controlling /LB and /UB, the input level of /CE1s and CE2s must be ≥ Vccs – 0.2 V or ≤ 0.2 V. The other pins (Address, I/O, /WE, /OE) can be in Hi-Z state.

[MEMO]

#### NOTES FOR CMOS DEVICES

#### 1 PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

# 2 HANDLING OF UNUSED INPUT PINS FOR CMOS

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to VDD or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

#### 3 STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

| DUAL OPERATION FLASH MEMORY 32M BITS A SERIES Information | M14914E         |

- The information in this document is current as of July, 2001. The information is subject to change
  without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data
  books, etc., for the most up-to-date specifications of NEC semiconductor products. Not all products
  and/or types are available in every country. Please check with an NEC sales representative for
  availability and additional information.
- No part of this document may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this document.
- NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of
  third parties by or arising from the use of NEC semiconductor products listed in this document or any other
  liability arising from the use of such products. No license, express, implied or otherwise, is granted under any
  patents, copyrights or other intellectual property rights of NEC or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers
  agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize
  risks of damage to property or injury (including death) to persons arising from defects in NEC
  semiconductor products, customers must incorporate sufficient safety measures in their design, such as
  redundancy, fire-containment, and anti-failure features.
- NEC semiconductor products are classified into the following three quality grades: "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products
  - developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.
  - "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
  - "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
  - "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.

(Note)

- (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
