**RECORDS OF REVISIONS**

Revision No	Revision No	Page	DESCRIPTION
0.0	Nov 30, 2001	-	First Draft
0.1	Jan 03, 2002	18, 20	Adjust maxium thickness(6.7mm) Removes conductive tape at gate PCB to improve ESD performance. (refer to the page 20 for details.)
1.0	Jan 30, 2002	14	Remove the gamut ratio. (because color coordinates are specified.)
		17	Update the specifications. (color coordinate and reflectance)
		28	insert the definition of N and n in the 10.3 and 10.4 clauses. insert the one note in the 10.4 clause.

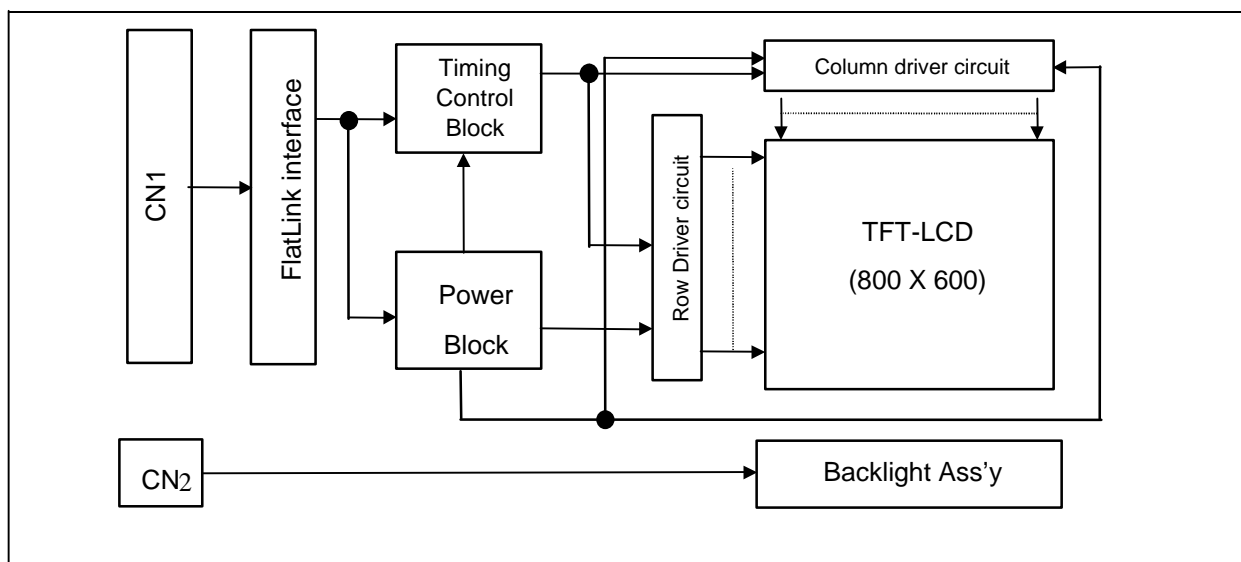

## 1. General Description

The LC104S1-A1 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transfective type<sup>(1)</sup> display operating in the normally white mode. This TFT-LCD has 10.4 inches diagonally measured active display area with SVGA resolution(600 vertical by 800 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LC104S1-A1 has been designed to apply the interface method that enables low power. Flat Link must be used as a LVDS(Low Voltage Differential Signaling) chip.

The LC104S1-A1 is intended to support applications where thin thickness, low power are critical factors and graphic display are important. In combination with the vertical arrangement of the sub-pixels, the LC104S1-A1 characteristics provide an excellent flat display for office automation products such as Tough PC.

(ref. No. 1 : Transfective type means that has a function of transmissive and reflective mode in display and display is visible indoor or outdoor under dark and sunlight at all.)

## General Features

Active screen size	10.4 inches (26.4 cm) diagonal
Outline Dimension	224.5 (H) x 172.0 (V) x 6.1 (D) mm (Typ.) Pls refer to page 20 for details.
Pixel Pitch	0.88 mm x RGB X 0.264mm
Pixel format	800 horiz. By 600 vert. Pixels (RGB stripes arrangement)
Color depth	6-bit, about 262,144 colors
Luminance, white	120 cd/m <sup>2</sup> (Typ.) (Transmissive only) , reflectance = 14%
Power Consumption	0.9W logic (typ.) / 3.0W CCFL(1) (TYP.)
Weight	310g (Typ.) 320g (Max.)
Display operating mode	Transfective mode, Normally White
Surface treatments	Hard coating (3H) of the front polarizer Anti-glare treatment of the rear polarizer

## 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

Parameter	symbol	Values		Units	Notes
		Min.	Max.		
Power Input Voltage	$V_{CC}$	-0.3	4.0	Vdc	At 25 +/- 5°C
Operating Temperature	$T_{OP}$	0	50	°C	1
Storage Temperature	$T_{ST}$	-20	60	°C	1
Operating Ambient Humidity	$H_{OP}$	10	90	%RH	1
Storage Humidity	$H_{ST}$	10	90	%RH	1

Note : 1. Temperature and relative humidity range are shown in the figure below.  
Wet bulb temperature should be 39 °C Max, and no condensation of water.

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LC104S1-A1 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCD.

**Table 2. ELECTRICAL CHARACTERISTICS**

Parameter	Symbol	Values			Units	Notes
		Min.	Typ.	Max.		
<b>MODULE :</b>						
Power Supply Input Voltage	$V_{CC}$	3.0	3.3	3.6	Vdc	
Power Supply Input Current	$I_{CC}$	231	272	313	mA	1
Differential Impedance	$Z_m$	90	100	110	ohm	2
Power Consumption	$P_C$	-	0.90	1.03	Watts	1
<b>LAMP :</b>						
Operating Voltage	$V_L$	485	500	600	$V_{RMS}$	3
Operating Current	$I_L$	3.0	6.0	6.5	mA	
Established Starting Voltage	$V_S$					4
at 25 °C		-	-	845	$V_{RMS}$	
at 0 °C		-	-	1015	$V_{RMS}$	
Operating Frequency	$f_L$	45	60	80	kHz	5
Discharge Stabilization Time	$T_S$			3	Minutes	6
Power Consumption	$P_{BL}$	-	3.0	3.3	Watts	7
Half Life Time		20,000	-	-	Hrs	8

**Note : The design of the inverter must have specification for the lamp in LCD Assembly.**

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter.

When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD Assembly should be operated in the same condition as installed in your instrument.

1. The specified current and power consumption are under the  $V_{CC}=3.3V$ ,  $25^{\circ}C$ ,  $f_v=60Hz$  condition whereas Mosaic pattern is displayed and  $f_v$  is the frame frequency.
2. This impedance value is needed to proper display and measured from LVDS  $T_x$  to the mating connector.
3. The variance of the voltage is 10%.
4. The voltage above  $V_S$  should be applied to the lamps for more than 1 second for start-up. Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.

5. The output of the inverter must have symmetrical (negative and positive) voltage waveform and symmetrical current waveform. (Unsymmetrical ratio is less than 10%) Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave.  
Lamp frequency may produce interference with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
6. Let's define the brightness of the lamp after being lighted for 5 minutes as 100%.  
 $T_s$  is the time required for the brightness of the center of the lamp to be not less than 95%.
7. The lamp power consumption shown above does not include loss of external inverter.  
The used lamp current is the lamp typical current.
8. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at  $25 \pm 2^\circ\text{C}$ .
9. Do not attach a conducting tape to lamp connecting wire.  
If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.

### 3-2. Interface Connections

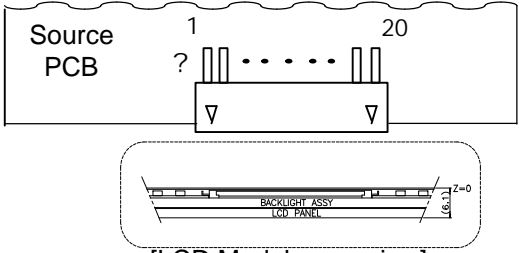

Interface chip must be used FlatLink, part No. THC63LVDM63A (Transmitter), THC63LVDF64A (Receiver) made by Thine Microsystems, Inc.

This LCD employs two interface connections, a 20 pin connector is used for the module electronics and the other connector is used for the integral backlight system.

The electronics interface connector is a model DF19K-20P-1H manufactured by HIROSE.

The pin configuration for the connector is shown in the table below.

**Table 3. MODULE CONNECTOR PIN CONFIGURATION(LVDS)**

Pin	Symbol	Description	Notes

Notes : Refer to LVDS Transmitter Data Sheet for detail descriptions.

### 3-3. Signal Timing Specifications

This is the signal timing required at the input of the LVDS Transmitter. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

**Table 6. Timing Table**

ITEM		SYMBOL	MIN	TYP.	MAX.	UNIT	NOTES
Dclk	Period	$t_{CLK}$	25	26	27	ns	38.5MHZ
Hsync	Period	$t_{HP}$	990	1024	1100	$t_{CLK}$	
	Width	$t_{WH}$	12	-	120		
Vsync	Period	$t_{VP}$	606	625	730	$t_{HP}$	
	Frequency	$f_V$	60	60	60	Hz	
	Width	$t_{WV}$	1	-	24	$t_{HP}$

	Vertical Back Porch	$t_{VBP}$	2	-	-		
	Vertical Front Porch	$t_{VFP}$	3	-	-		
	Vertical Blank	-	6	~	$t_{VP} - t_{VV}$		$t_{WV} + t_{VBP} + t_{VFP}$

### 3-4. Signal Timing Waveforms

### 3-5. Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 7. COLOR DATA REFERENCE**

Color		Input Color Data																
		Red						Green						Blue				
		MSB			LSB			MSB			LSB			MSB		LSB		
		R5	R4	R3	R2	R1	R0	G5	G4	G3	G2	G1	G0	B5	B4	B3	B2	B1

### 3-6. Power Sequence

Parameter	Value			Units
	Min.	Typ.	Max.	
T <sub>1</sub>	-	-	10	(ms)
T <sub>2</sub>	0	-	50	(ms)
T <sub>3</sub>	200	-	-	(ms)
T <sub>4</sub>	200	-	-	(ms)
T <sub>5</sub>	0	-	50	(ms)
T <sub>6</sub>	0	-	10	(ms)
T <sub>7</sub>	400	-	-	(ms)

- Notes :
1. Please avoid floating state of interface signal at invalid period.
  2. When the interface signal is invalid, be sure to pull down the power supply for LCD V<sub>CC</sub> to 0V.
  3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

## 4. Optical Specification

### 4.1 Transmissive Mode

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25 °C. The values specified are at an approximate distance 500mm from the LCD surface at a viewing angle of F and T equal to 0 °.

FIG. 1 presents additional information concerning the measurement equipment and method.

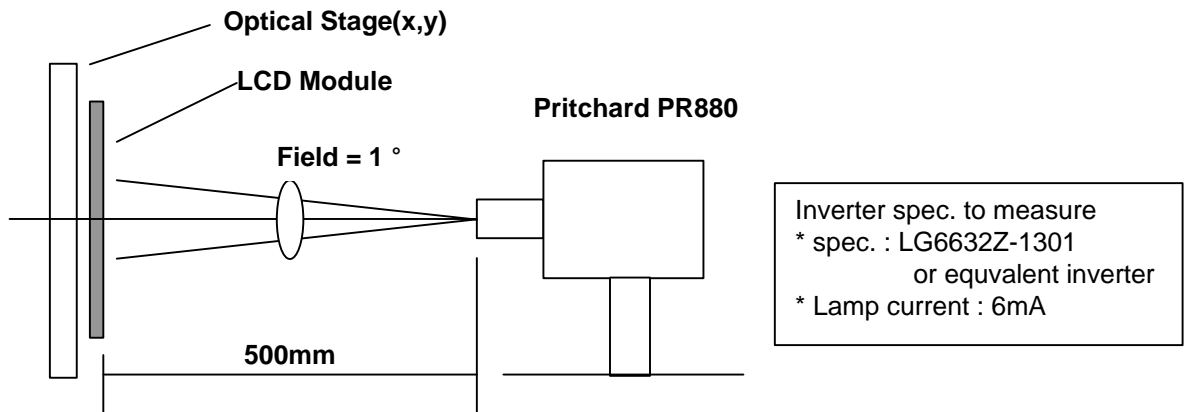

FIG. 1 Optical Characteristic Measurement method

**Table 8. OPTICAL CHARACTERISTICS**

Parameter	Symbol	Values			Units	Notes
		Min.	Typ.	Max.		
Surface Luminance, white at center 1point	L (WH)	102	120	-	cd/m <sup>2</sup>	2
Luminance Variation at 9points	d WHITE	-	1.2	1.4	%	3
Contrast Ratio at center 1point	CR	28	40	-	-	1
Response Time	Tr					
Rise Time	Tr <sub>R</sub>	-	10	15	ms	4
Decay Time	Tr <sub>D</sub>	-	30	35	ms	
Viewing Angle at CR=5						
x axis, right(F =0°)	T r	25	-	-	degree	5
x axis, left (F =180°)	T l	25	-	-	degree	
y axis, up (F =90°)	T u	25	-	-	degree	
y axis, down (F =270°)	T d	45	-	-	degree	
CIE Color Coordinates						
Red	Rx	0.393	0.423	0.453	-	s is ± 0.03
	Ry	0.255	0.285	0.315	-	
Green	Gx	0.290	0.320	0.350	-	
	Gy	0.371	0.401	0.431	-	
Blue	Bx	0.180	0.210	0.240	-	
	By	0.226	0.256	0.286	-	
White	Wx	0.283	0.313	0.343	-	
	Wy	0.299	0.329	0.359	-	

The normal temperature : 25 ± 2° C , Vcc = 3.3volts

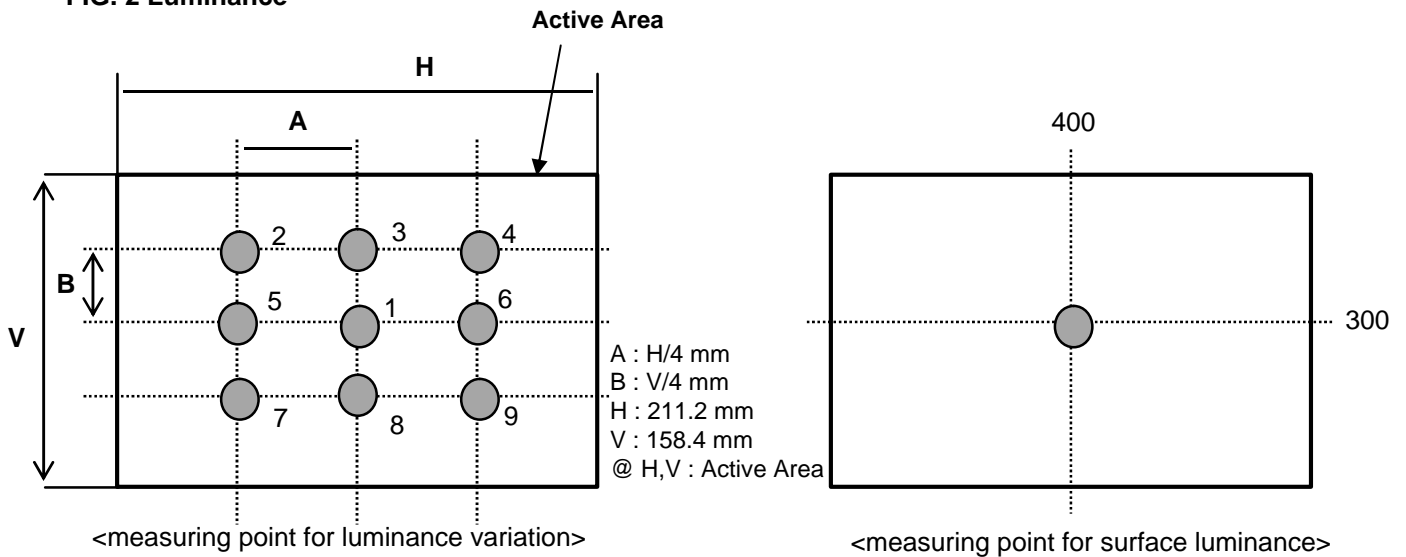

Notes : 1. Contrast Ratio (CR) is defined mathematically as :

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the center point across the LCD surface 500 mm from the surface with all pixels displaying white. For more information see FIG 2.  
When  $I_{BL}=6.0\text{mA}$ ,  $L_{WH}=102\text{cd/m}^2$  (Min.)  $120\text{cd/m}^2$  (Typ.) under Transmissive mode only
3. The variation in surface luminance , d WHITE is determined by measuring  $L_{ON}$  at each test position 1 through 5, and then dividing the maximum  $L_{ON}$  of 5 points luminance by minimum  $L_{ON}$  of 9 points luminance. For more information see FIG 2.  
$$\text{WHITE} = \text{Maximum} (L_{ON1}, L_{ON2}, \dots, L_{ON9}) / \text{Minimum} (L_{ON1}, L_{ON2}, \dots, L_{ON9})$$
4. Response time is the time required for the display to transition from to black(Rise Time,  $Tr_R$ ) and from black to white (Decay Time,  $Tr_D$ ). For additional information see FIG 3.
5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
6. Gray scale specification

Gray Level	Luminance(%) (Typ.)
L0	1.3
L7	2.1
L15	5.3
L23	10.0
L31	17.7
L39	28.2
L47	43.6
L55	65.3
L63	100

**FIG. 2 Luminance**

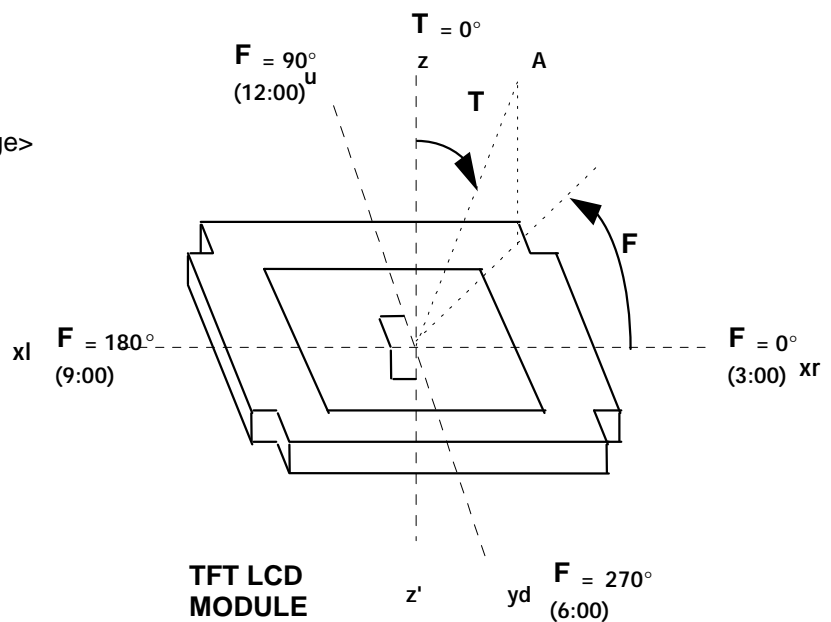

**FIG. 3 Response Time**

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

**FIG. 4 Viewing angle**

<dimension of viewing angle range>

**4.2 Reflective Mode**

Optical characteristics are determined after the unit has been 'OFF' and stable for approximately 30 minutes in a dark environment at 25 °C.

The optical characteristics shall be measured with the method shown in Fig. 2 below.

And A use of this data is not to guarantee but to refer to a reflective mode.

FIG. 2 Optical Characteristic Measurement methods

**Table 9. OPTICAL CHARACTERISTICS**

Parameter	Symbol	Values			Units	Notes
		Min.	Typ.	Max.		
Contrast at center 1point	CR	-	5	-	-	1 at 15pages
Response Time	Tr					
Rise Time	Tr <sub>R</sub>	-	10	15	ms	4 at 15pages
Decay Time	Tr <sub>D</sub>	-	30	35	ms	
Viewing Angle at CR =2						
x axis, right( =0°)	r	40	-	-	degree	5 at 15pages
x axis, left ( =180°)	l	40	-	-	degree	
y axis, up ( =90°)	u	40	-	-	degree	
y axis, down ( =270°)	?d	40	-	-	degree	
CIE Color Coordinates						
White	Wx	-	0.410	-	-	7
Using C65 light source	Wy	-	0.439	-	-	
Reflectance	RF	-	14	-	%	8

Notes : 7. It is assumed that chromaticity of the light source is (x=0.308, y=315)  
The measuring system is CM-2002 (with the unit reflecting diffusely) made by MINOLTA co. Ltd.

8. Reflectance is defined as follows:

$$\text{Reflectance} = \frac{\text{Light detected level of the reflection by the LCD module}}{\text{Light detected level of the reflection by BaSO}_4} \times 100$$

**FIG. 5 definition of measuring location**

## 5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LC104S1-A1. In addition the figures in the next page are detailed mechanical drawing of the LCD.

Outside dimensions	Horizontal	224.5 +/-0.5mm
	Vertical	172.0 +/-0.5mm
	Depth	6.1 +/-0.3mm*
Bezel area	Horizontal	214.2 +/-0.5mm
	Vertical	161.8 +/-0.5mm
Active display area	Horizontal	211.2mm
	Vertical	158.4mm
Weight(approximate)	310g (Typ.), 320g (Max.)	
Surface Treatment	Hard coating (3H) of the front polarizer Anti-glare treatment of the rear polarizer	

\* Pls. refer to page 20 for details

<REAR VIEW>

- Notes
1. Unspecified dimensional tolerance is  $\pm 0.5\text{mm}$
  2. The max thickness including components height (Phantom circled Area) is 6.7 mm

<DETAIL DESCRIPTION OF SIDE MOUNTING SCREW>

SEC A-A(S=10/1)

- \*MOUNTING SCREW DEPTH : MAX 2.3mm
- \*SCREW(4ea) TORQUE : Max 2kgf\*cm

Notes: Screw plated through the method of non-electrolytic nickel plating is preferred to reduce possibility that results in vertical and/or horizontal line defect due to the conductive particles from screw surface.

## 6. Reliability

Environment test condition

No.	Test Item	Conditions
1	High temperature storage test	Ta= 60°C 168 hr
2	Low temperature storage test	Ta= -20°C 96 hr
3	High temperature operation test	Ta= 50°C 50%RH 120 hr
4	Low temperature operation test	Ta= 0°C 96 hr
5	Vibration test (non-operating)	Sine wave, 10 ~ 500 ~ 10Hz, 1.5G, 0.37oct/min 3 axis, 1hour/axis
6	Shock test (non-operating)	Half sine wave, 180G, 2ms one shock of each six faces(i.e. run 180G 2ms for all six faces)
7	Altitude operating storage / shipment	0 - 10,000 feet(3048m) 0 - 40,000 feet(12,192m)

{Result Evaluation Criteria}

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

## **7. International Standards**

### **7-1. Safety**

- a) UL 1950 Third Edition, Underwriters Laboratories, Inc. Jan. 28, 1995.  
Standard for Safety of Information Technology Equipment Including Electrical Business Equipment.
- b) CAN/CSA C22.2 No. 950-95 Third Edition, Canadian Standards Association, Jan. 28, 1995.  
Standard for Safety of Information Technology Equipment Including Electrical Business Equipment.
- c) EN 60950 : 1992+A1: 1993+A2: 1993+A3: 1995+A4: 1997+A11: 1997  
IEC 950 : 1991+A1: 1992+A2: 1993+A3: 1995+A4: 1996  
European Committee for Electrotechnical Standardization(CENELEC)  
EUROPEAN STANDARD for Safety of Information Technology Equipment Including Electrical Business Equipment.

### **7-2. EMC**

- a) ANSI C63.4 "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electrical Equipment in the Range of 9kHz to 40GHz. "American National Standards Institute(ANSI), 1992
- b) C.I.S.P.R "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." International Special Committee on Radio Interference
- c) EN 55022 "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." European Committee for Electrotechnical Standardization (CENELEC), 1998

## 8. Packing

### 8-1. Designation of Lot Mark

a) Lot Mark

A	B	C	D	E	F	G	H	I	J	K	L	M
---	---	---	---	---	---	---	---	---	---	---	---	---

A,B,C : SIZE  
 D : YEAR  
 E : MONTH  
 F,G : PANEL CODE  
 H : ASSEMBLY CODE  
 I,J,K,L,M : SERIAL NO.

Note:

1. YEAR

YEAR	97	98	99	2000	2001	2002	2003	2004	2005	2006	2007
Mark	7	8	9	0	1	2	3	4	5	6	7

2. MONTH

MONTH	Jan.	Feb.	Mar.	Apr.	May.	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.
Mark	1	2	3	4	5	6	7	8	9	A	B	C

3. Serial No.

Serial No.	1 ~ 99999	100000 ~
Mark	00001 ~ 99999	A0001 ~ A9999,....., Z9999

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module.  
 This is subject to change without prior notice.

### 8-2. Packing Form

a) Package quantity in one box : 10 pcs

b) Box Size : 315 mm × 254 mm × 243 mm

## 9. PRECAUTIONS

Please pay attention to the following when you use this TFT LCD module.

### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module.  
And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach a transparent protective plate to the surface in order to protect the polarizer.  
Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not described because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.  
Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are determined to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200 \text{ mV}$  (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

### **9-3. ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

### **9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE**

Strong light exposure causes degradation of polarizer and color filter.

### **9-5. STORAGE**

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5° C and 35° C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

### **9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM**

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.  
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

## 10. IIS (Incoming Inspection Standard)

### 10.1. Inspection Method

#### 10.1.1. Ambient conditions

- a. Temperature : 20 ~ 25 ° C
- b. Humidity : 65 ± 5 % RH
- c. Illumination : Single 20W fluorescent lamp non-directive  
(300 to 700 Lux)

#### 10.1.2. Viewing distance

The distance between the LCM and the inspector's eyes shall be at least 35Cm.

#### 10.1.3. Viewing Angle

The inspection shall be conducted within normal viewing angle range.  
Refer to 14 pages for viewing angle.

#### 10.1.4. Measurement mode

Inspection method is based on transmissive mode only.

### 10.2 Inspection Criteria

#### 10.2. Dot Defect

##### 10.2.1. Bright Dot

Dots(sub-pixels) which appeared brightly in the screen when the LCM displayed with dark pattern.

- R,G or B 1 dot ----- 10 Max
- Adjacent 2 dots ----- 2 Max (Horizontal only)
- Total amount of Bright dots ----- 10 Max
- Minimum Distance between bright dots ----- 20 mm, Max 2

##### 10.2.2. Dark Dot

Dots(sub-pixels) which appeared darkly in the screen when the LCM displayed with bright pattern.

- 1 dot ----- 10 Max
- Adjacent 2 dots ----- 2 Max (Horizontal only)
- Total amount of Dark dot ----- 10 Max
- Minimum Distance between dark dots ----- 20 mm, Max 2

##### 10.2.3. Total amount of Dot Defects ----- 15 Max(Combination)

- Note) a. Every dot herein means Sub-Pixel (Each Red,Green, or Blue Color)  
b. Bright & Dark dots are larger than half sub-pixel.  
(Dots smaller than half sub-pixel are not counted as a defect dots.)

### 10.3. Polarizer Defects

Items		Criteria
Scratches	Linear	0.01 = W = 0.1, 0.3 = L = 3.5, n = 4
Dent	Circular	0.2 = D = 0.5, n = 4, 0.5 = D = 1.0, n = 1

Note)

a. Average Diameter

$$D = \frac{a+b}{2}$$

b. Linear :  $a > 2b$ , Circular :  $a = 2b$

c. Extraneous substances which can be wiped out, like Finger Print, Particles, are not considered as a defect.

d. Defects which is on the Black Matrix (outside of Active Area) are not considered as a defect.

W : Width  
L : Length  
D : Average diameter  
n : Number of Defects

### 10.4 Foreign Material

Items		Criteria
Foreign Material	Linear	0.01 = W = 0.1, 0.3 = L = 3.5, N = 7, n = 4
	Circular	(Bright) 0.1 = D = 0.4, n = 4 (Gray) 0.1 = D = 0.8, n = 4

Note)

a. Average Diameter

$$D = \frac{a+b}{2}$$

b. Linear :  $a > 2b$ , Circular :  $a = 2b$

c. In case of Linear Foreign Material, both length( L) and number of pixels (N) are used as criteria for the sake of inspection convenience.

W : Width  
L : Length  
D : Average diameter  
n : Number of Foreign Material  
N : Number of Pixels on which Foreign Material resides

### 10.5. Line Defect

All kinds of line defects such as vertical, horizontal or cross are not allowed.

### 10.6. Bezel Appearance

Scratches, minor bents, stains, particles on the Bezel frame are not considered as a defect.

### 10.7. Others

Issues which is not defined in this criteria shall be discussed with both parties, Customer and Supplier, for better solution.
