

# PhlatLight® PT39 Projection Chipset

## Technology Overview

Luminus Devices' Projection Technology is an innovative solid-state light source created to replace arc lamps in projection systems. Enabled by unique use of Photonic Lattice technology, PhlatLight chipsets represent a major breakthrough in brightness that delivers all the benefits of solid state light sources in projections applications:

- Wide color gamut for vivid colors, exceeds NTSC.
- Instant turn-on, no more wait time.
- High reliability; no lamp replacement
- Environmentally friendly technology - Mercury-free.
- Electronic control of color points and light intensity on a frame by frame basis

PhlatLight products benefit from numerous innovations in the domain of packaging, thermal management and optical coupling that allow designers to achieve efficient light engine designs and deliver high screen brightness.

## Collimated Angular Intensity Distribution

## Features

- Matched RGB Chipset with 3.9mm<sup>2</sup> emitting area designed for small projector applications
- Photonic lattice technology for very high surface brightness
- 100% surface emission for high collection efficiency and low optical losses
- Wide color gamut: RED 623 nm, GREEN 526 nm, BLUE 462 and EP Blue 460 nm typical dominant wavelength
- Single emitting area per color allows for collection with single lens for simplified optics
- Aspect ratio compatible with 4:3 micro-displays
- Over 1120 emitted white lumens at 8000K color temperature from single chipset under Continuous Wave Operation
- Over 725 emitted white lumens at 8000K color temperature from single chipset under Pulsed (time-sequential) Operation
- Uniform surface emission
- Thermally efficient Type CX (lowest thermal resistance, Common Anode)
- RoHS (lead-free) compliant

## Applications

- Specifically engineered for pocket-size, ultra portable front projectors, head-up projection displays
- Optimized for Micro-Display diagonal sizes ranging from 0.4" to 0.55" with 4:3 aspect ratio.
- Suitable for DLP™ (0.45" and 0.55" SVGA), LCoS and HTPS/3LCD microdisplays

Note 1: EP-Blue is recommended for new designs. Please see page 9 for part ordering numbers.

Note 2: All ratings are based on operation with a constant heat sink temperature  $T_{hs} = 40^\circ\text{C}$ . See Thermal Resistance section for  $T_{hs}$  definition.

Note 3: Parameters rated at typical duty cycle and Pulsed operation frequency  $f > 240\text{Hz}$ ;  $DC = \frac{t}{T}$  

Note 4: Duty Cycle used to specify device ratings under Pulsed operation. PhlatLight devices can operate at duty cycles ranging from 1% to 100%. At higher duty cycles, drive current should be adjusted to maintain the junction temperature at desired levels to meet the application lifetime requirements.

Note 5: In pulsed operation, rise time from 10 to 90% of forward current should be larger than 0.5 microseconds

Note 6: For Blue and EP-Blue devices, total flux from emitting area at typical dominant wavelength.

Note 7: In CIE 1931 chromaticity diagram coordinates, normalized to  $X+Y+Z=1$

Note 8: For Reference only

Note 9: Estimated median lifetime, assuming  $T_j < 80^\circ\text{C}$  for Red devices,  $T_j < 115^\circ\text{C}$  for Blue devices and  $T_j < 125^\circ\text{C}$  for Green devices

## Absolute Maximum Ratings

	Symbol	Red	Green	Blue	EP-Blue	Unit
Maximum Current <sup>1</sup>	Max	12	12	12	12	A
Absolute Maximum Junction Temperature <sup>2</sup>	Max $T_{jmax}$	110	170	170	170	°C
Storage Temperature Range		-40/+100	-40/+100	-40/+100	-40/+100	°C

**Note 1:** Luminus PhlatLight LEDs are designed for operation to an absolute maximum forward drive current density of 2.5A/mm<sup>2</sup> cw, and 3A/mm<sup>2</sup> pulsed ( $f > 240\text{Hz}$ , duty cycle < 60%). Please refer to absolute maximum rating table above for specific absolute maximum currents for the products covered in this datasheet.

Product lifetime data is specified at recommended forward drive currents. Sustained operation at absolute maximum currents will result in a reduction of device lifetime compared to recommended forward drive currents. Actual device lifetimes will also depend on junction temperature. Refer to the lifetime derating curves for further information.

In pulsed operation, rise time from 10 to 90% of forward current should be larger than 0.5 microseconds.

**Note 2:** Sustained operation above Maximum Operating Junction Temperature ( $T_{jmax}$ ) will result in reduced device life time.

**Luminous Flux variation with Wavelength:  $\Phi_v = f(\lambda_d)$  at Recommended Operating Current  $I_F$**

See note 1 on page 6.

**Luminous Flux variation with Drive Current -  $\Phi_v = f(I_F)$  - Typical**

See notes 1,2 on page 6.

**Dominant Wavelength variation with Forward Current -  $\lambda_d = f(I_F)$  - Typical.**

See notes 1,2 on page 6.

**Forward Voltage variation with Drive current -  $V_F = f(I_F)$  - Typical**

**Optical Spectrum (Typical)**

See note 3 on page 6.

**Chart Notes**

- Note 1: For Pulsed operation, typical RGB duty cycles used are 25%, 50% and 25% respectively ( $T_{hs} = 40^{\circ}C$ ).
- Note 2: Yellow square indicate device operating point under recommended conditions listed in the Optical and Electrical Characteristics table.
- Note 3: Typical Spectrum at recommended peak drive current.

### Thermal Resistance

### Typical Thermal Resistance

$R_{\theta j-b}^1$	1.6 °C/W
$R_{\theta b-hs}^2$	0.2 °C/W
$R_{\theta j-hs}^{1,2}$	1.8 °C/W
$R_{\theta j-ref}^2$	1.6 °C/W

Note 1: Thermal resistance values are based on finite element analysis model results correlated to measured  $R_{\theta j-hs}$  data.

Note 2: Thermal Resistance is based on eGraph 1205 Thermal interface.

### Thermistor Information

The thermistor used in PhlatLight devices mounted on core-boards is from Murata Manufacturing Co. The global part number is NCP15XH103J03RC. Please see <http://www.murata.com/> or <http://www.murata.co.jp> for details on calculating thermistor temperature.
