74LVC1G07

SINGLE BUFFER/DRIVER WITH OPEN DRAIN OUTPUT

NEW PRODUCT

Description

The 74LVC1G07 is a single buffer gate with an open drain output. The device is designed for operation with a power supply range of 1.65V to 5.5V. The input is tolerant to 5.5V allowing this device to be used in a mixed voltage environment. The device is fully specified for partial power down applications using I_{OFF}. The I_{OFF} circuitry disables the output preventing damaging current backflow when the device is powered down. The open-drain output can be connected to other open drain outputs to implement active-low wired-OR or active-high wired-AND functions. The maximum sink current is 32 mA.
