◈ Absolute Maximum Ratings (Ta = 25℃)

Parameter		Symbol	Limits	Unit
Input Voltage		V_{IN}	23.0	V
Power Dissipation	SOP-8	P_d	0.6(Note1)	W
	TO-220F-4SL		2.0(Note1)	
	TO-252-5L		1.5(Note1)	
Junction Temperature		T_J	150	℃
Operate Temperature Range		T_{opr}	-30 ~ +125	℃
Storage Temperature Range		T_{stg}	-55 ~ +150	℃

Note 1 : No Heat-sink

Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its operating ratings. The maximum allowable power dissipation is a function of the maximum junction temperature, $T_{J(max)}$, the junction-to-ambient thermal resistance, θ_{JA}, and the ambient temperature, TA.
The maximum allowable power dissipation at any ambient temperature is calculated using:
$PD(max) = (T_{J(max)} - T_A) \div \theta_{JA}$. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.

◈ Guaranteed Operating Conditions (Ta = 25℃)
