Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified, min/max limits apply across the -55°C to +125°C temperature range for the DS7834, DS7839 and across the 0°C to +70°C range for the DS8834, DS8839. All typicals are given for $V_{CC} = 5.0\text{V}$ and $T_A = 25^\circ\text{C}$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: Only one output at a time should be shorted.
