ONE-CHANNEL STEP-DOWN PWM CONTROLLER

Features

- Under-Voltage Lockout (UVLO) Protection
- Totem Pole Output
- Output Short Circuit Protection
- Incorporates Soft-Start Function
- Wide Operating Frequency :
10 kHz to 1MHz
- Shutdown Control
- Low Dissipation Current :
Typical 1.6mA in Operation
- SOP-8 & TSSOP-8 Package Available

General Description

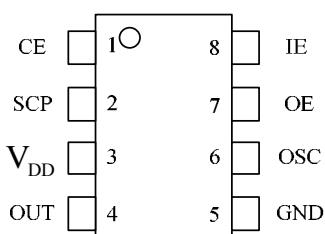

The AAT1110 is a one-channel step-down PWM controller incorporating a soft-start function and a short circuit protection (SCP) function.

Each device consists of an on-chip voltage reference, error amplifier, pulse width modulation controller, under-voltage protection, soft-start, and short circuit protection circuits. Switching frequencies up to 1MHz are set by an external resistor and capacitor. Soft-start time can be implemented by the SCP capacitor.

Additionally, a chip enabled feature is provided to power down and reduce the supply current to $10\mu A$.

How to Set the Time Constant for Soft-Start and Short Circuit Protection

1. Soft-Start

At power on, the AAT1110 operates in soft-start mode. The capacitor C_{SCP} connected to SCP pin starts charging at a constant current. In the soft-start mode, the voltage at SCP pin (V_{SCP}) is input to the PWM comparator, so that the ON duty of the OUT pin is controlled by the V_{SCP} . At completion of the soft-start operation, the voltage at the SCP pin stays low; the input from soft-start circuit to the PWM comparator stays high, and enters the short circuit protection waiting state.

Soft-Start Time

$$t_s (\text{sec}) \sim 0.84 \times C_{SCP} (\mu\text{F})$$

2. Short Circuit Protection

If the switching regulator output suddenly drops due to loading effect, the error amplifier output will be fixed at V_{OM+} and capacitor C_{SCP} will start charging. When the voltage at the SCP pin reaches approximately 1.26V, the output pin will set low and SCP pin will remain low.

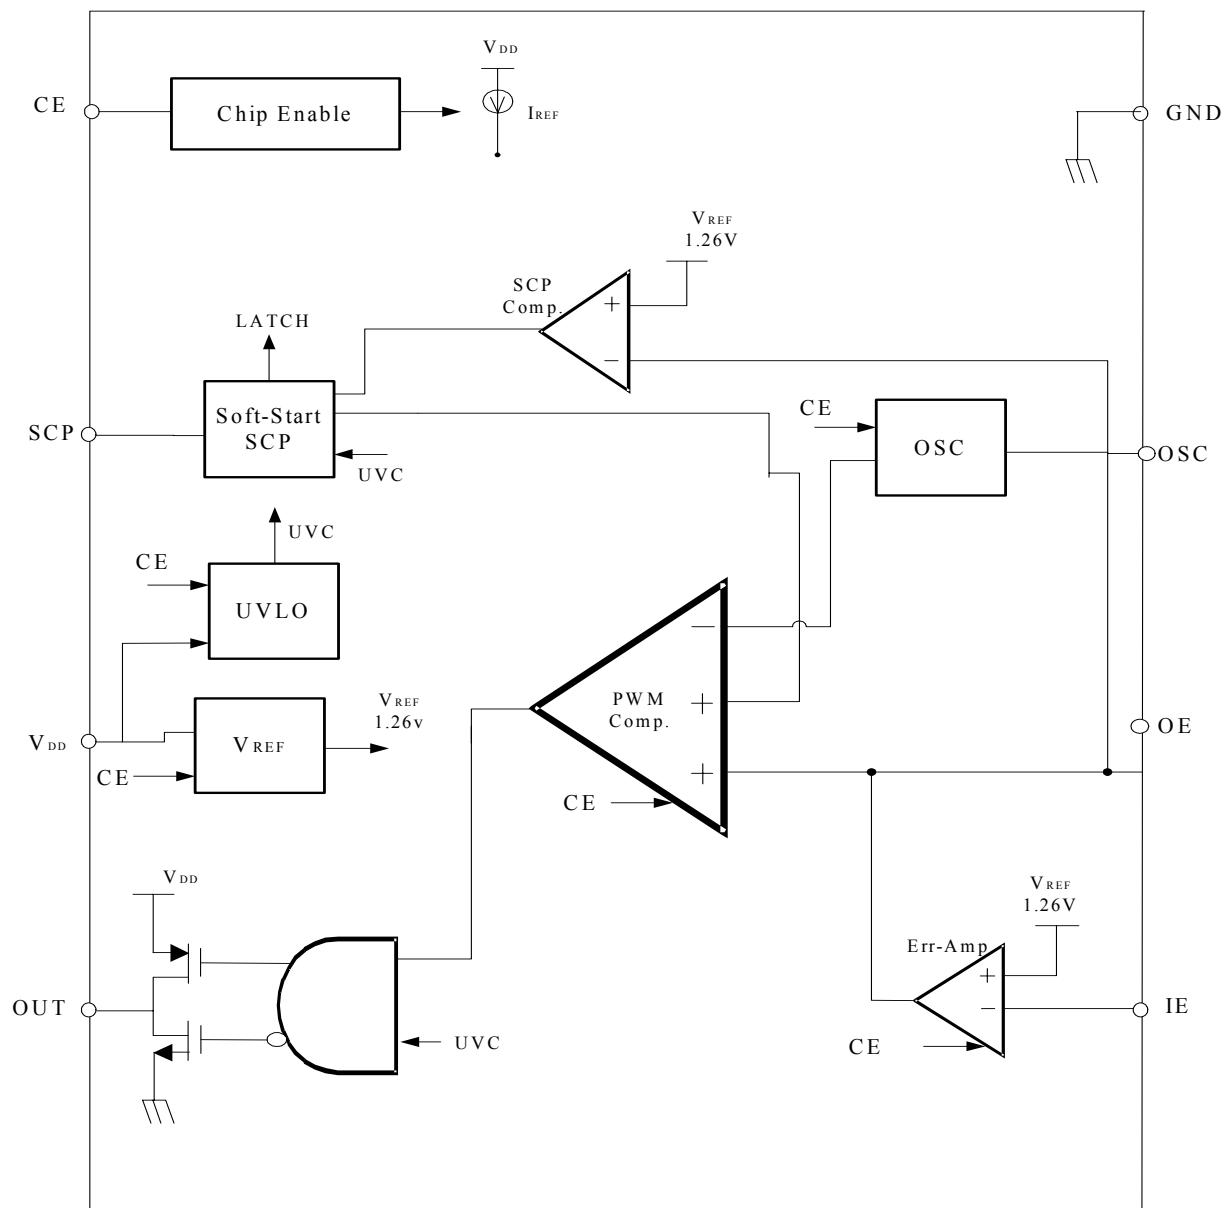

Once the protection circuit starts operating, the circuit can be recovered by setting the power supply.

Short Circuit Detection Time

$$t_{scp} (\text{sec}) \sim 0.84 \times C_{SCP} (\mu\text{F})$$
