

CCD area image sensor **S9970/S9971 series**

Low dark signal · low readout noise/front-illuminated FFT-CCD

S9970/S9971 series are families of FFT-CCD image sensors specifically designed for low-light-level detection in scientific applications. S9970/S9971 series offer lower dark current and lower readout noise than S7010/S7011 series that have been marketed. By using the binning operation, S9970/S9971 series can be used as a linear image sensor having a long aperture in the direction of the device length. This makes S9970/S9971 series ideally suited for use in spectrophotometry. The binning operation offers significant improvement in S/N and signal processing speed compared with conventional methods by which signals are digitally added by an external circuit. S9970/S9971 series also feature low noise and low dark signal (MPP mode operation). This enables low-light-level detection and long integration time, thus achieving a wide dynamic range.

S9970/S9971 series have an effective pixel size of $24 \times 24 \mu\text{m}$ and are available in image areas ranging from $12.288 \text{ (H)} \times 1.44 \text{ (V)} \text{ mm}^2$ (512×60 pixels) up to a large image area of $24.576 \text{ (H)} \times 6.048 \text{ (V)} \text{ mm}^2$ (1024×252 pixels). S9970/S9971 series are pin compatible with S7010/S7011 series. (Operating conditions are a little bit changed from S7010/S7011 series.)

Features

- Low dark signal: $10 \text{ e}^-/\text{pixel/s}$ Typ. (0°C , MPP mode)
- Low readout noise: $4 \text{ e}^-/\text{rms}$ Typ.
- $512 \text{ (H)} \times 60 \text{ (V)}$ to $1024 \text{ (H)} \times 252 \text{ (V)}$ pixel format
- Pixel size: $24 \times 24 \mu\text{m}$
- Line/pixel binning
- 100 % fill factor
- Wide dynamic range
- MPP operation

Applications

- Fluorescence spectrometer, ICP
- Raman spectrometer
- Industrial inspection requiring
- Semiconductor inspection
- DNA sequencer
- Low-light-level detection

*16: Maximum current Imax:

If the current is greater than Imax, the heat absorption begins to decrease due to the Joule heat. It should be noted that this value is not a damage threshold. To protect the thermoelectric cooler and maintain stable operation, the supply current should be less than 60 % of this maximum current.

*17: Temperature of cool side of thermoelectric cooler

*18: Temperature of hot side of thermoelectric cooler

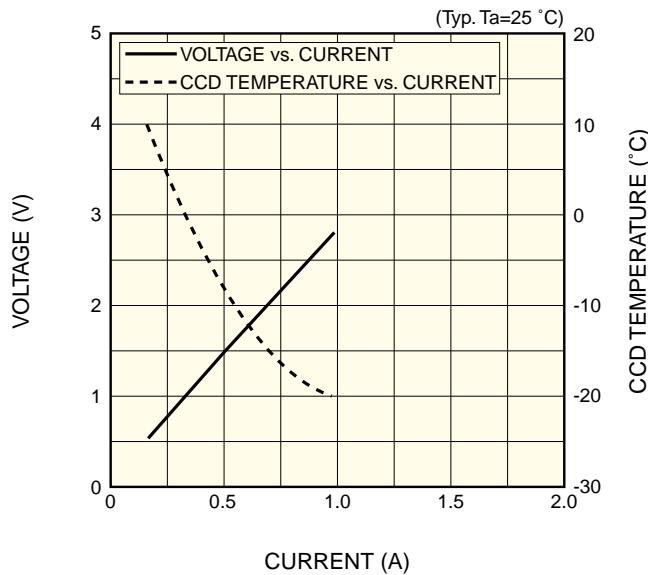

*19: Maximum heat absorption Qmax

This is a heat absorption when the maximum current is supplied to the TE-cooler.

■ Specifications of built-in temperature sensor

A chip thermistor is built in the same package with a CCD chip, and the CCD chip temperature can be monitored with it. A relation between the thermistor resistance and absolute temperature is expressed by the following equation.

$$R_1 = R_2 \times \exp B (1/T_1 - 1/T_2)$$

where R_1 is the resistance at absolute temperature T_1 (K)

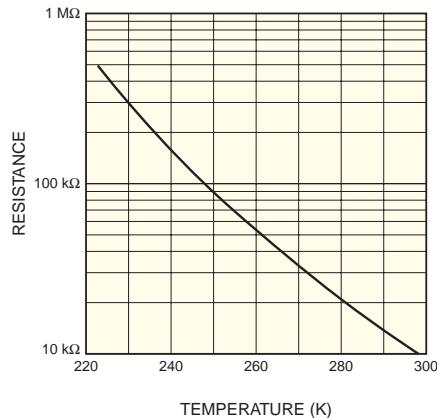

R_2 is the resistance at absolute temperature T_2 (K)

B is so-called the B constant (K)

The characteristics of the thermistor used are as follows.

$$R(298K) = 10 k\Omega$$

$$B(298K / 323K) = 3450 K$$

KMPD011EB

■ Precaution for use (Electrostatic countermeasures)

- Handle these sensors with bare hands or wearing cotton gloves. In addition, wear anti-static clothing or use a wrist strap, in order to prevent electrostatic damage due to electrical charges from friction.
- Avoid directly placing these sensors on a work-desk or work-bench that may carry an electrostatic charge.
- Provide ground lines or ground connection with the work-floor, work-desk and work-bench to allow static electricity to discharge.
- Ground the tools used to handle these sensors, such as tweezers and soldering irons.

It is not always necessary to provide all the electrostatic measures stated above. Implement these measures according to the amount of damage that occurs.

■ Element cooling/heating temperature incline rate

When cooling the CCD by an externally attached cooler, set the cooler operation so that the temperature gradient (rate of temperature change) for cooling or allowing the CCD to warm back is less than 5 K/minute.
