

#### DESCRIPTION

The **LX1720** is a highly-integrated, **Switching Class-D Stereo Power Amplifier Controller IC** with power and size features that make it ideal for multimedia computer applications, as well as other applications where high fidelity sound is required.

With input voltage ranging from 7V-15V, the LX1720 is designed to operate over the full 20Hz to 20kHz audio range. Signal distortion measurements using industry standard 1kHz signal yields THD + noise levels < 1% (10 watts output).

Its high efficiency (>92%) eliminates the need for heat sinks — even while delivering more than  $10W_{RMS}$  across 8 ohms per channel ( $20W_{RMS}$  stereo) with 0.1 ohm SO-8 power FETs.

The LX1720's output power is limited only by external FETs and available supply voltage.

While offering breakthrough performance capabilities for notebooks, the LX1720 is equally attractive for multimedia systems or to drive full-size home theatre speakers.

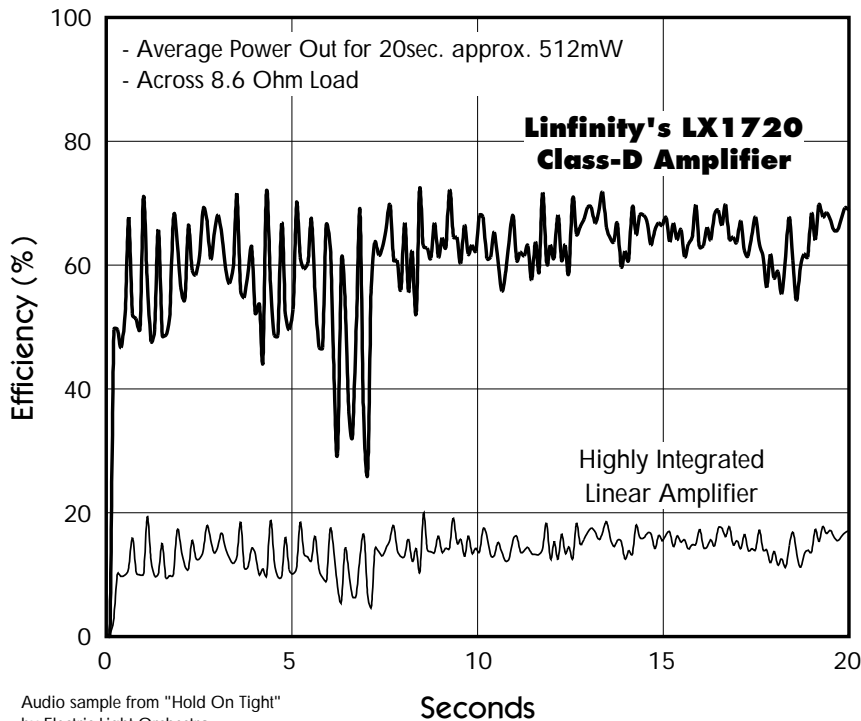

**IMPORTANT:** For the most current data, consult Linfinity's web site: <http://www.linfinity.com>.

#### KEY FEATURES

- Integrated Switching (Class-D) Stereo Power Amplifier Controller IC
- Delivers  $>10W_{RMS}$  Across  $8\Omega$  /Channel ( $20W_{RMS}$  stereo)
- Output Power Limited Only By External FETs And Available Supply Voltage
- Will Drive A Wide Range Of Speakers
- High Efficiency (>92%)
- Due To High Efficiency, Power FETs Do Not Require Heatsinking
- Audio Bandwidth Of 20Hz to 20kHz
- Wide Input Voltage Range Of 7V-15V
- Low Output Signal Distortion <1%
- High Operating Frequency (350kHz) Helps To Reduce Output Filter Size
- Compact Design Minimizes EMI / RFI

#### PRODUCT HIGHLIGHT

##### EFFICIENCY COMPARISON OF THE CLASS-D AMPLIFIER

#### APPLICATIONS / BENEFITS

##### Notebook Computers:

- Replaces existing internal low power linear amplifier with a high efficiency Class-D amplifier
- Enables the use of virtually any external speaker without amplification
- Precious battery life is extended
- Fully protected power topology can withstand shorts or external speaker failures without damage, overheating or posing fire hazard

##### Desktop Computers:

- Output power capability of up to  $20W_{RMS}$  per channel in an area less than  $3" \times 3"$ , without using expensive heatsinks
- Greatly reduced power supply requirements when compared to a linear solution of same power capabilities
- Any speakers can be used including conventional home stereo speakers
- Very light weight circuitry will not add to the overall weight of the system
- Multimedia amplifier can be directly incorporated on the motherboard using surface mount components

#### ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply Voltage (PVDD, VDD) .....	-0.3V to 18V
RPWM .....	-0.3V to $V_{CN}+0.3V$
INPUT (R), INPUT (L) .....	-0.3V to $V_{CN}+0.3V$
FBK+(R), FBK-(R), FBK+(L), FBK-(L), SLEEP .....	-0.3V to $V_{DD}$
MUTE (R), MUTE (L) .....	-0.3V to 6.0V
EAOUT (R), EAOUT (L) .....	-0.3V to $V_{CN}+0.3V$
CPWM, CT .....	-0.3V to $V_{CN}+0.3V$
IS+, LIS-, RIS+ .....	$V_{DD}-2$ to $V_{DD}$
Operating Junction Temperature	
Plastic (DB Package) .....	125°C
Storage Temperature Range .....	-65°C to 150°C
Lead Temperature (Soldering, 10 seconds) .....	300°C

Note 1. Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.

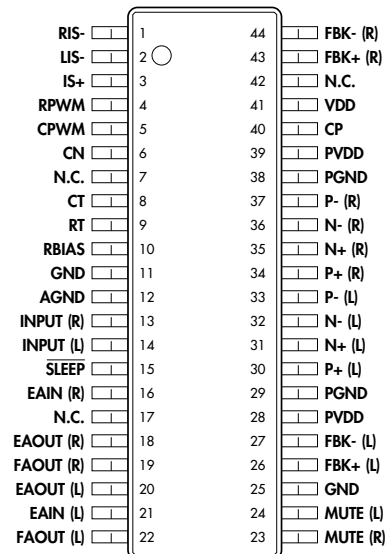

#### THERMAL DATA

##### DB PACKAGE:

THERMAL RESISTANCE-JUNCTION TO AMBIENT, $\theta_{JA}$	65°C/W
---	--------

Junction Temperature Calculation:  $T_J = T_A + (P_D \times \theta_{JA})$ .  
 The  $\theta_{JA}$  numbers are guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.
