No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors, which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

The devices listed in this document are for use of "Standard" applications as specified below, and are not suitable for use of "Special" or "Specific" applications as specified below. NEC disclaims any responsibility or liability of any kind for any failure of equipment, personal injury or damage to property that may arise from the use of NEC devices for such "Special" applications.

The devices listed in this document should not be used for such "Specific" applications.

Application examples recommended by NEC Corporation.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio

and visual equipment, home electronic appliances, machine tools, personal electronic equipment

and industrial robots.

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster

systems, anti-crime systems, safety equipment and medical equipment (not specifically designed

for life support). DataSheet4U.com

Specific: Military systems, aircraft, aerospace equipment, submersible repeaters, nuclear reactor control

systems, life support systems or medical equipment for life support, or any other equipment for

which specifically high standard of quality or reliability is required.

DOD-N-0249 3/20

1. DESCRIPTION

The NL2432DR22-11B is a TFT (thin film transistor) active matrix color liquid crystal display (LCD) comprising an amorphous silicon TFT attached to each signal electrode, a driving circuit. This module is consist of LCD panel, Driver, Front light and Touch panel

The 8.9 cm (3.5 Type) diagonal display area contains 240×320 pixels and can display 262,144 colors simultaneously.

2. FEATURES

Front light type with four LEDs (Light Emitting Diodes) Include Touch panel Recommended LCD controller: part no. S1L50282F23k100, NEC corp. High contrast ratio 6-bit digital RGB signals

3. APPLICATIONS

PDA

4. STRUCTURE AND FUNCTION

A reflective TFT (thin film transistor) color LCD module is comprised of a TFT liquid crystal panel structure with LSIs for driving the TFT array. Sandwiching liquid crystal material in the narrow gap between a TFT array glass substrate and a color filter glass substrate creates the TFT panel structure.

RGB (red, green, blue) data signals from a source system are modulated into a form suitable for activematrix addressing by the onboard signal processor and sent to the driver LSIs, which in turn addresses the individual TFT cells.

Acting as an Electro-optical switch, each TFT cell regulates light from the natural light and so on when activated by the data source. By regulating the amount of light reflection passing through the array of red, green, and blue dots, color images are created with clarity.

5. OUTLINE OF CHARACTERISTICS (at room temperature)

Display area $53.64 \text{ (H)} \times 71.52 \text{ (V)} \text{ mm} \text{ [Diagonal 8.9 cm]}$

Drive system a-Si TFT active matrix

Display colors 262,144 colors

Number of pixels $240 \text{ (H)} \times 320 \text{ (V)}$

Pixel arrangement RGB vertical stripe

Pixel pitch $0.2235 \text{ (H)} \times 0.2235 \text{ (V)} \text{ mm}$

Module size $66.2 \text{ (Typ., H)} \times 91.0 \text{ (Typ., V)} \times 4.5 \text{ (Typ., D)} \text{ mm}$

[D: Not include FPC connector]

Weight 52 g (Typ.)

Contrast ratio 10:1 (Typ.:With Front light and Touch panel)

Reference: 40:1 (Without Front light and Touch panel)

Response time 32 ms (Typ., Ton + Toff) U.com

Reflection ratio 17 % (Typ. With Front light and Touch panel)

Reference: 35%(Without Front light and Touch panel)

Signal system Controller input (6-bit signals, DCK, DE, POC, OEN) signals Note 1

Supply voltage VCC 3.0 V (typ. Logic)

VDD 5.0 V (typ. Υ control) VGON 15.0 V (LCD driving) VGOFF –15.0 V (LCD driving)

Power consumption 26 mW (Typ.) Target value

Both Gamma and COM circuit in driver are included. Neither Front light nor Touch panel are included.

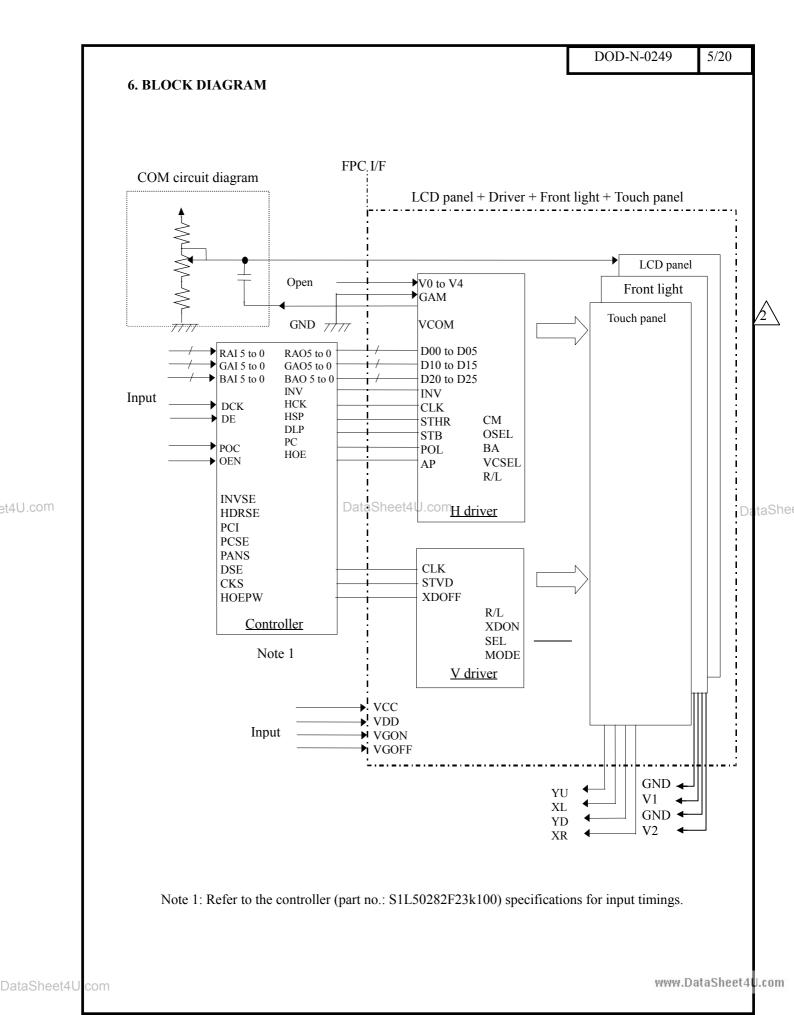

Note 1: Refer to the controller (part no.: S1L50282F23k100) specifications.

10. SUPPLY VOLTAGE SEQUENCE

Remark1: Supply voltages must keep above timings or input at the same time. And when supply voltages are Data Sheet 4U.com blocked, these must be opposite timings.

Remark2: The "OEN" signal of the controller should be "H" after VGON.

Remark3: The signal should not be down during operation. Even if signal could recover, LCD module can not be operated correctly, the display may be un-uniformity. In case signal is down, VCC should be turned off, and then turn VCC and signal on as above sequence.

14. GENERAL CAUTIONS

Because the following statements are very important, please be sure you understand their contents completely.

This figure is a warning that you will get hurt and/or the module will be damaged if you make a mistake in operation.

This figure is a warning that you will get hurt if you make a mistake in operation.

CAUTIONS

- (1) Caution when taking out the module
 - ① Pick up the pouch only, when removing the module from a carrier box.
- (2) Cautions for handling the module
 - ① As the electrostatic discharges may break the LCD module, handle the LCD module with care against electrostatic discharges. Peel protection sheet out from the LCD panel surface as slowly as possible.

As the LCD panel and front light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.

- 3 As the surface of polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
- ① Do not pull the interface connectors in or out while the LCD module is operating.
- ⑤ Put the module display side down on a flat horizontal plane.
- 6 Handle connectors and cables with care.
- Then the module is operating, do not lose logic signals. If any one or more of these signals is lost, the LCD panel would be damaged.
- ® Don't push or rub the surface of LCD module please. If you do, the scratches or the marks like rubbing marks may be left on the surface of the module.
- The LCD module should be mounted in strong body such as magnesium alloy. If the press or twist are added to the module, the display may have un-uniformity image. When the module is mounted to customer chassis, please evaluate the display condition carefully.
- (3) Cautions regarding atmosphere
 - ① Dew-drop atmosphere must be avoided.
 - ② Do not store and/or operate the LCD module in a high-temperature and/or high-humidity atmosphere. Storage in an anti-static pouch and under the room temperature atmosphere is recommended.
 - 3 Do not operate the LCD module in high magnetic field.
- (4) Cautions about the module characteristics
 - ① Do not apply any fixed pattern data for a long time to the LCD module. It may cause image sticking.

www.DataSheet4U.com

DataSheet4U com

DOD-N-0249 18/20

(5) Other cautions

- ① Do not disassemble and/or reassemble the LCD module.
- ② When returning the module for repair, etc., please pack the module properly to avoid any damages. NEC recommends using original shipping packages.

The liquid crystal display has the following specific characteristics. These are not defects or malfunctions.

The ambient temperature may affect the optical characteristics of this module.

Uneven brightness and/or small spots may be observed depending on different display patterns.
