### 128Kx24 Static RAM

#### CMOS, High Speed Module

The ED18F24128C is a high speed 3 megabit Static RAM module organized as 128K words by 24 bits. This module is constructed from three 128Kx8 Static RAMs in SOJ packages on an epoxy laminate (FR4) board.

Three chip selects ( $\overline{E0}$ - $\overline{E2}$ ) are used to independently enable the three bytes. Reading or writing can be executed on individual bytes or any combination of multiple bytes through proper use of selects.

The ED18F24128C is offered in 60 pin ZIP package, which enable three megabits of memory to be placed in less than 0.75 square inches of board space.

All inputs and outputs are TTL compatible and operate from a single 5V supply. Fully asynchronous circuitry requires no clocks or refreshing for operation and provides equal access and cycle times for ease of use.
