

T-57-11

- **2.25 WATT • 24 PIN**
- **AUTO-INSERTABLE**

ELECTRICAL SPECIFICATIONS

All Specifications Typical @ +25°C, Nominal Line, and Full Load Unless Otherwise Noted.

INPUT SPECIFICATIONS

Input Voltage Range ±5%, ±10% is Available
 Input Filter π (Pi) Filter

GENERAL SPECIFICATIONS

Efficiency Unregulated: 70-93%, Regulated: 55-72%
 Isolation Voltage > 500 VDC
 Isolation Resistance > 10⁹ Ohms
 Switching Frequency 20 KHz, typ.

OUTPUT SPECIFICATIONS:

Voltage Accuracy ±3% max.
 Temperature Coefficient ±0.02%/°C max.
 Voltage Stability (24hr) ±0.05% max.
 Line Regulation: Unregulated ±5-10% max, Regulated: ±0.02% max.
 Load Regulation: Unregulated ±5% max, Regulated: ±1% max.
 Ripple and Noise (20MHz BW) 50mv P-P
 Short Circuit Protection Unregulated: Auto Recovery, Regulated: 10 min

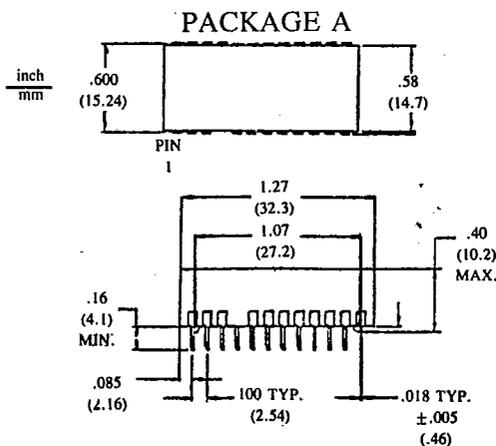

ENVIRONMENTAL SPECIFICATIONS

Operating Temperature Range -25°C to +71°C
 Surface Temp. Rise Above Ambient 10°C/Watt Diss.
 Derating None
 Storage Temperature Range -40°C to +125°C
 Humidity 20% to 95% R.H. (non-condensing)
 Cooling Free-Air Convection

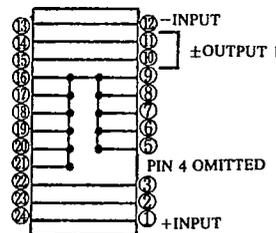

PHYSICAL SPECIFICATIONS (CASE A)

Dimensions 1.27" × 0.62" × 0.40" (32.3 × 15.7 × 10.2 mm)
 Weight 0.5 oz (14.2 grams)
 Case Material Non-Conductive Black Plastic

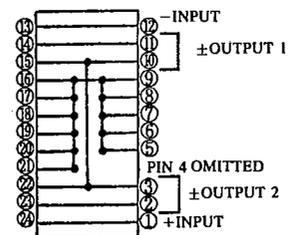

MECHANICAL DIMENSIONS & PIN CONNECTION

NOTES

APPLICATION

FCI's DC/DC converters serve the dual function of isolating the DC input from the external loading effects, and of providing DC output levels different from the primary DC input.

The applications for the FCI DC/DC converters are many gas-discharge displays, florescent displays, portable computers, modems, computer add-on boards of various types ... and most especially, LAN networks.

DESIGN

The FCI DC/DC converters employ the most advance design techniques available in the field ... and produce the most desirable features, such as minimal output ripple and noise, extremely tight regulation over the range of output currents and temperature swings, and rock hard stability over time.

QUALITY CONTROL AND RELIABILITY

The FCI converters are made from materials which are carefully inspected when received (IQC), meticulously monitored when being processed (IPQC) and assiduously checked before shipping (OQC), all to the tightest AQL levels in the industry. Additionally, every FCI DC/DC converter is burned-in before final testing to eliminate any possible early-life problems with the components included in the device.

Test Circuit

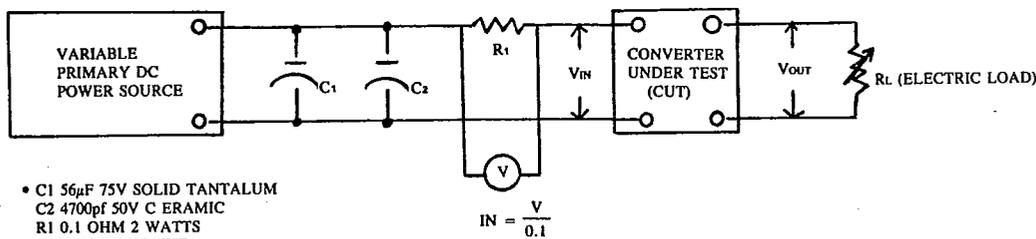

Fig. 1 Input/Output Static Test

- Vin Vout Test By DVM
- Efficiency = $\frac{V_{OUT} \times I_{OUT}}{V_{IN} \times I_{IN}} \times 100\%$
- Load Regulation = $\frac{V_{OUTmax.} - V_{OUTmin}}{V_{OUTmin}} \times 100\%$
 (Variation of output current from min to max.)
- Line Regulation = $\frac{V_{OUT max} - V_{OUT min}}{V_{OUT min}} \times 100\%$
 (Variation of Input Voltage from min. to max.)
- Short circuit test: Output short directly.
