High-Efficiency, 1.5MHz Op Amps with RRIO

MAX9617/MAX9618

General Description

The MAX9617/MAX9618 are low-power, zero-drift operational amplifiers, designed for use in portable consumer, medical, and industrial applications.

The MAX9617/MAX9618 feature rail-to-rail CMOS inputs and outputs, a 1.5MHz GBW at just 59µA supply current and 10µV (max) zero-drift input offset voltage over time and temperature. The zero-drift feature of the MAX9617/MAX9618 reduces the high 1/f noise typically found in CMOS input operational amplifiers, making it useful for a wide variety of low-frequency measurement applications.

The MAX9617 is available in a space-saving, 2mm x 2mm, 6-pin SC70 package. The MAX9618 is available in a 2mm x 2mm, 8-pin SC70 package. All devices are specified over the -40°C to +125°C automotive operating temperature range.

Applications

Sensor Interfaces
Loop-Powered Systems
Portable Medical Devices
Battery-Powered Devices
Cardiac Monitors

Features

- ◆ Low 59µA Quiescent Current
- ◆ Very-Low 10µV (max) Input Offset Voltage
- ◆ Low Input Noise
42nV/√Hz at 1kHz
1µVp-p from 0.1Hz to 10Hz
- ◆ Rail-to-Rail Inputs and Outputs
- ◆ 1.5MHz GBW
- ◆ Ultra-Low 10pA Input Bias Current
- ◆ Single 1.8V to 5.5V Supply Voltage Range
- ◆ Unity-Gain Stable
- ◆ Available in Tiny 6-Pin SC70 (MAX9617) and 8-Pin SC70 (MAX9618) Packages

Ordering Information

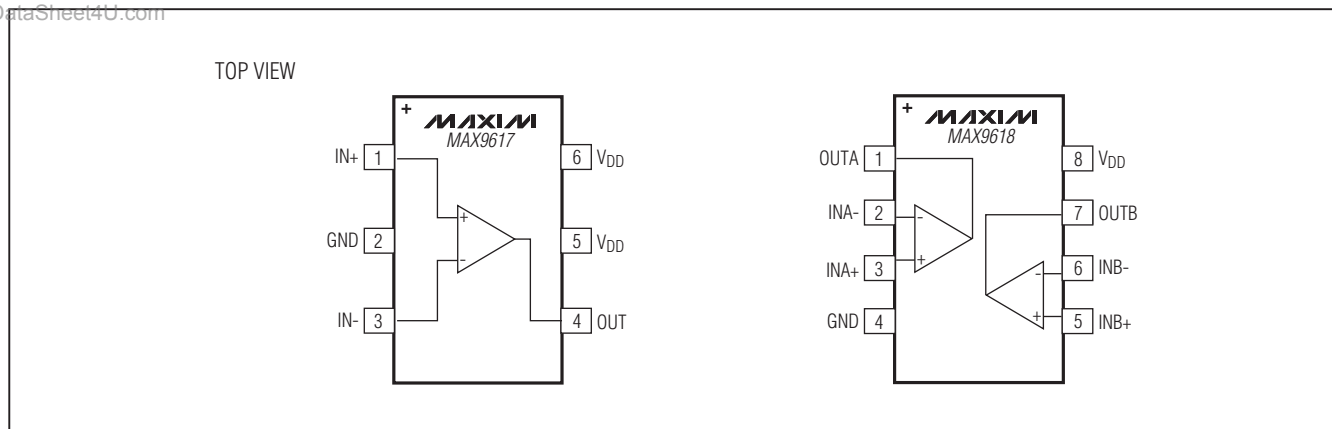

PART	TEMP RANGE	PIN-PACKAGE
MAX9617AXT+	-40°C to +125°C	6 SC70
MAX9618AXA+*	-40°C to +125°C	8 SC70

+Denotes a lead(Pb)-free/RoHS-compliant package.

High-Efficiency, 1.5MHz Op Amps with RRIO

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (V_{DD} to GND).....-0.3V to +6V
 All Other Pins, IN+ to IN-(GND - 0.3V) to (V_{DD} + 0.3V)
 Short-Circuit Duration to Either Supply Rail,
 OUT, OUTA, OUTB..... 10s
 Continuous Input Current (any pins)..... ±20mA

Continuous Power Dissipation (T_A = +70°C)
 6-Pin SC70 (derate 3.1mW/°C above +70°C).....245.4mW
 8-Pin SC70 (derate 3.1mW/°C above +70°C).....245mW
 Operating Temperature Range.....-40°C to +125°C
 Junction Temperature+150°C
 Storage Temperature Range.....-65°C to +150°C
 Lead Temperature (soldering, 10s).....+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{DD} = +3.3V, V_{GND} = 0V, V_{IN+} = V_{IN-} = V_{DD}/2, R_L = 100kΩ to V_{DD}/2, T_A = -40°C to +125°C, unless otherwise noted. Typical values are at +25°C.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS
POWER SUPPLY							
Supply Voltage Range	V _{DD}	Guaranteed by PSRR, 0°C ≤ T _A ≤ +70°C		1.6		5.5	V
		Guaranteed by PSRR, -40°C ≤ T _A ≤ +125°C		1.8		5.5	
Supply Current (per Amplifier)	I _{DD}	T _A = +25°C			59	78	μA

MAX9617/MAX9618

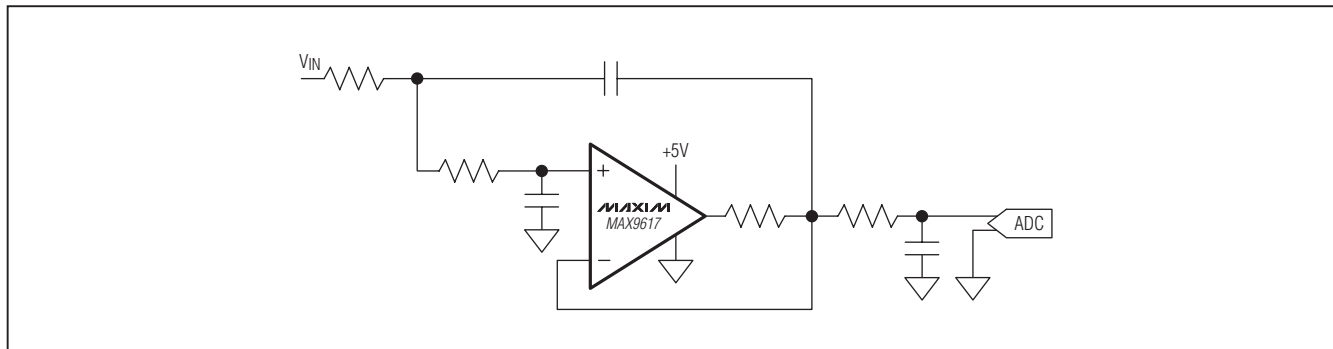

Figure 1. Typical Application Circuit: Sallen-Key Active Lowpass Filter

Detailed Description

The MAX9617 (single) and MAX9618 (dual) are precision, low-power op amps ideal for signal processing applications. These devices use an innovative autozero technique that allows precision and low noise with a minimum amount of power. The low input offset voltage, CMOS inputs, and the absence of $1/f$ noise allows for optimization of active filter designs.

The MAX9617/MAX9618 achieve rail-to-rail performance at the input through the use of a low-noise charge pump. This ensures a glitch-free, common-mode input voltage range extending from the negative supply rail up to the positive supply rail, eliminating crossover distortion common to traditional n-channel/p-channel CMOS pair inputs, reducing harmonic distortion at the output.

www.DataSheet4U.com

Autozero

The MAX9617/MAX9618 feature an autozero circuit that allows the device to achieve less than $10\mu\text{V}$ (max) of input offset voltage and eliminates the $1/f$ noise.

Internal Charge Pump

An internal charge pump provides an internal supply typically 1V beyond the upper rail. This internal rail allows the MAX9617/MAX9618 to achieve true rail-to-rail inputs and outputs, while providing excellent common-mode rejection, power-supply rejection ratios, and gain linearity.

The charge pump requires no external components, and in most applications is entirely transparent to the user. The operating frequency is well beyond the unity-gain frequency of the amplifier, avoiding aliasing or other signal integrity issues in sensitive applications.

Applications Information

The MAX9617/MAX9618 low-power, low-noise, and precision operational amplifiers are designed for applications in the portable medical, such as ECG and pulse oximetry, portable consumer, and industrial markets.

The MAX9617/MAX9618 are also ideal for loop-powered systems that interface with pressure sensors or strain gauges.

Capacitive-Load Stability

Driving large capacitive loads can cause instability in many op amps. The MAX9617/MAX9618 are stable with capacitive loads up to 400pF . Stability with higher capacitive loads can be improved by adding an isolation resistor in series with the op-amp output. This resistor improves the circuit's phase margin by isolating the load capacitor from the amplifier's output. The graph in the *Typical Operating Characteristics* gives the stable operation region for capacitive load versus isolation resistors.

Power Supplies and Layout

The MAX9617/MAX9618 operate either with a single supply from $+1.6\text{V}$ to $+5.5\text{V}$ with respect to ground or with dual supplies from $\pm 0.8\text{V}$ to $\pm 2.75\text{V}$. When used with dual supplies, bypass both supplies with their own $0.1\mu\text{F}$ capacitor to ground. When used with a single supply, bypass V_{DD} with a $0.1\mu\text{F}$ capacitor to ground.

Careful layout technique helps optimize performance by decreasing the amount of stray capacitance at the op amp's inputs and outputs. To decrease stray capacitance, minimize trace lengths by placing external components close to the op amp's pins.
