

**3V IMT2100 WCDMA Power Amplifier Module**

**Functional Block Diagram**

**Product Description**

Advanced compact 3V linear power amplifier module designed for mobile UMTS handset applications in IMT2100 band. The small size and high performance is achieved with high-reliability InGaP HBT technology. The module is fully integrated, providing a simple 50 Ohms interface on input and output ports. No external matching or bias components are required. Despite its very compact size, the module has exceptional efficiency and linearity. The module provides high/low output power modes and supports low power mode operation at reduced supply voltage.
