

Linear Systems replaces discontinued Intersil ID100 The ID100 is a low leakage Monolithic Dual Pico-Amp Diode

The ID100 low-leakage monolithic dual diode provides a superior alternative to conventional diode technology when reverse current (leakage) must be minimized. In addition the monolithic dual construction allows excellent capacitance matching per diode. The ID100 features a leakage current of 0.1 pA and is well suited for use in applications such as input protection for operational amplifiers.

ID100 Benefits:

- Negligible Circuit Leakage Contribution
- Circuit "Transparent" Except to Shunt High-Frequency Spikes
- Simplicity of Operation

ID100 Applications:

- Op Amp Input Protection
- Multiplexer Overvoltage Protection
