DESCRIPTION

The Model 13 is a temperature compensated, piezoresistive silicon pressure sensor packaged in TO-8 configurations. It provides excellent performance and long-term stability.

Integral temperature compensation is provided over a range of 0-50°C using a laser-trimmed ceramic compensation board. An additional laser-trimmed resistor is included which can be used to adjust the gain of an external differential amplifier and provide sensitivity interchangeability of $\pm 1\%$.

The sensing element used in low pressure Model 13 has a double bossed design that produces a high sensor output of 100 mV (typical) at 1 PSI.

This package style is also available in ranges up to 0-250 PSI. For sensors in a dual-in-line package please refer to the Models 1210 and 1220. For additional information regarding uncompensated sensors, please contact the factory.

Notes

1. Output span of unamplified sensor.

2. For most models, compensation resistors are in an integral part of the sensor package; no additional external resistors are required. Test pins must be kept open.

3. Best Fit Straight Line.

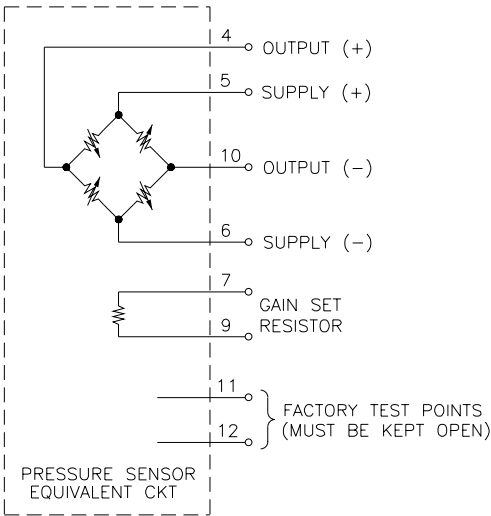

4. Temperature range: 0-50°C in reference to 25°C.
5. For a zero-to-full scale pressure step change.

6. 10 Hz to 1 kHz.

7. Between case and sensing element.

8. Wetted materials are glass, ceramic, silicon, RTV, nickel, gold, and aluminum.
