

Low Noise Amplifier, 12 dB Gain, 200 - 1000 MHz

V 3.00

AM-/AMC-142

Features

- 2.2 dB Typical Midband Noise Figure
- +6 dBm Typical Midband Output Power
- +20 dBm Typical Midband Third Order Intercept

Description

M/A-COM's AM-142 is a coupler feedback amplifier with low noise figure and high intercept points for the low bias current. The use of coupler feedback minimizes noise figure and current in a high intercept amplifier. This amplifier is packaged in a TO-8 package. The ground plane on the PC board should be configured to remove heat from under the package. AM-142 are ideally suited for use where a low noise, high reliability amplifier is required.
