

# Agilent HFBR-5923AL Fibre Channel 2.125/1.0625 GBd 850 nm Small Form Factor Pin Through Hole (PTH) Low Voltage (3.3 V) Optical Transceiver Data Sheet

### **Description**

The HFBR-5923AL from Agilent Technologies is a high performance, cost-effective optical transceiver for serial optical data communications applications operating at 2.125 Gb/s and 1.25 Gb/s. This module is designed for multimode fiber and operates at a nominal wavelength of 850 nm. The transceiver incorporates 3.3 V DC compatible technology including an 850 nm VCSEL transmitter. The HFBR-5923AL offers maximum flexibility to Fibre Channel designers, manufacturers, and system integrators to implement a range of solutions for multi-mode Fibre Channel applications. This product is fully compatible with all equipment meeting the Fibre Channel FC-PI 200-M5-SN-I and 200-M6-SN-I 2.125 GBd specifications, and is compatible with the Fibre Channel FC-PI 100-M5-SN-I, FC-PI 100-M6-SN-I, FC-PH2 100-M5-SN- and FC-PH2 100-M6-SN-I 1.0625 GBd specifications. The HFBR-5923AL has been designed to work with CD laser legacy systems. The HFBR-5923AL is also compliant with the SFF Multi Source Agreement (MSA).

### **Applications**

- Mass storage system I/O
- Computer system I/O
- High speed peripheral interface
- · High speed switching systems
- Host adapter I/O
- RAID cabinets

### **Related Products**

- HFBR-5602: 850 nm +5 V Gigabit Interface Converter (GBIC) for Fiber
   Channel FC-PH-2
- HFBR-53D3: 850 nm +5 V 1 x 9 Laser transceiver for Fiber Channel FC-PH-2
- HFBR-5910E: 850 nm +3.3 V SFF MTRJ Laser transceiver for Fibre Channel FC-PH-2
- HDMP-2630/2631: 2.125/1.0625 Gbps TRx family of SerDes IC
- HFBR-5720L: 850 nm 3.3 V 2.125/ 1.0625 Gbps SFP Transceiver

### **Features**

- Compatible with 2.125 GBd Fibre Channel FC-PI standard
  - FC-PI 200-M5-SN-I for 50/125 μm multimode cables
  - FC-PI 200-M6-SN-I for 62.5/125 µm multimode cables
- Compatible with 1.0625 GBd VCSEL operation for both 50/125 and 62.5/125 µm multimode cables
- Compatible with VCSEL and CD laser applications
- Industry standard Pin Through Hole (PTH) package
- LC-duplex connector optical interface
- Link lengths at 2.125 GBd:
   0.5 to 300 m 50/125 μm MMF
   0.5 to 150 m 62.5/125 μm MMF
- Link lengths at 1.0625 GBd: 0.5 to 500 m 50/125  $\mu m$  MMF 0.5 to 300 m 62.5/125  $\mu m$  MMF
- Reliable 850 nm Vertical Cavity Surface Emitting Laser (VCSEL) source technology
- Laser AEL Class I (eye safe) per: US 21 CFR (J) EN 60825-1 (+AII)
- Single +3.3 V power supply operation
- 2 x 5 DIP package style with LC-duplex fiber
- Wave solder and aqueous wash process compatible

See Table 5 for Process Compatibility Specifications.

### **Module Package**

Agilent offers the Pin Through Hole package utilizing an integral LC-Duplex optical interface connector. The transceiver uses a reliable 850 nm VCSEL source and requires a 3.3 V DC power supply for optimal system design.

### **Module Diagrams**

Figure 1 illustrates the major functional components of the HFBR-5923AL. The connection diagram for both modules are shown in Figure 2. Figure 6 depicts the external configuration and dimensions of the module.

### Installation

The HFBR-5923AL can be installed in any MSA-compliant Pin Through Hole port. The module Pin Description is shown in Figure 2.

### **Solder and Wash Process Capability**

These transceivers are delivered with protective process plugs inserted into the LC connector receptacle. This process plug protects the optical subassemblies during wave solder and aqueous wash processing and acts as a dust cover during shipping. These transceivers are

	PIN DESCRIPTION						
PIN	NAME	TYPE					
1	Rx GROUND	GROUND					
2	Rx POWER	POWER					
3	Rx SD	STATUS OUT					
4	Rx DATA BAR	SIGNAL OUT					
5	Rx DATA	SIGNAL OUT

Figure 2. Module pin assignments and pin configuration.

compatible with industry standard wave or hand solder processes.

### **Recommended Solder Fluxes**

Solder fluxes used with the HFBR-5923AL should be water-soluble, organic fluxes. Recommended solder fluxes include Lonco 3355-11 from London Chemical West, Inc. of Burbank, CA, and 100 Flux from Alpha-Metals of Jersey City, NJ.

# Recommended Cleaning/Degreasing Chemicals

Alcohols: methyl, isopropyl, isobutyl.

Aliphatics: hexane, heptane.

Other: naphtha.

Do not use partially halogenated hydrocarbons such as 1,1.1 trichoroethane or ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrolldone. Also, Agilent

does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

### **Transmitter Section**

The transmitter section includes an 850 nm VCSEL (Vertical Cavity Surface Emitting Laser) light source and a transmitter driver circuit. The driver circuit maintains a constant optical power level provided that the data pattern is valid 8B/10B code. Connection to the transmitter is provided via an LC optical connector.

### **TX Disable**

The HFBR-5923AL accepts a transmit disable control signal input which shuts down the transmitter. A high signal implements this function while a low signal allows normal laser operation. In the event of a fault (e.g., eye safety circuit activated), cycling this control signal resets the module. The TX Disable control should be actuated upon initialization of the module. See Figure 5 for product timing diagrams.

### **Eye Safety Circuit**

For an optical transmitter device to be eye-safe in the event of a single fault failure, the transmitter will either maintain normal, eye-safe operation or be disabled. In the event of an eye safety fault, the VCSEL will be disabled.

### **Receiver Section**

Connection to the receiver is provided via an LC optical connector. The receiver bandwidth of this circuit enables the HFBR-5923AL to be compatible with both VCSEL and CD laser applications. This circuit also includes a Signal Detect (SD) circuit which provides an open collector logic low output in the absence of a usable input optical signal level.

### **Signal Detect**

The Signal Detect (SD) output indicates if the optical input signal to the receiver does not meet the minimum detectable level for Fibre Channel compliant signals. When SD is low it indicates loss of signal. When SD is high it indicates normal operation. The Signal Detect thresholds are set to indicate a definite optical fault has occurred (e.g., disconnected or broken fiber connection to receiver, failed transmitter).

### Functional Data I/O

Agilent's HFBR-5923AL fiberoptic transceiver is designed to
accept industry standard differential signals. In order to reduce the
number of passive components
required on the customer's board,
Agilent has included the functionality of the transmitter bias resistors and coupling capacitors
within the fiber optic module. The
transceiver is compatible with an
"AC-coupled" configuration and is
internally terminated. Figure 1
depicts the functional diagram of
the HFBR-5923AL.

Caution should be taken to account for the proper interconnection between the supporting Physical Layer integrated circuits and the HFBR-5923AL. Figure 3 illustrates the recommended interface circuit.

### **Reference Designs**

Figure 3 depicts a typical application configuration, while Figure 4 depicts the multisourced power supply filter circuit design.

### **Regulatory Compliance**

See Table 1 for transceiver Regulatory Compliance performance. The overall equipment design will determine the certification level. The transceiver performance is offered as a figure of merit to assist the designer.

### **Electrostatic Discharge (ESD)**

There are two conditions in which immunity to ESD damage is important. Table 1 documents our immunity to both of these conditions. The first condition is during handling of the transceiver prior to attachment to the PCB. To protect the transceiver, it is important to use normal ESD handling precautions. These precautions include using grounded wrist straps, work benches, and floor mats in ESD controlled areas. The ESD sensitivity of the HFBR-5923AL is compatible with typical industry production environments. The second condition is static discharges to the exterior of the host equipment chassis after installation. To the extent that the duplex LC optical interface is exposed to the outside of the host equipment chassis, it may be subject to system-level ESD requirements. The ESD performance of the HFBR-5923AL exceeds typical industry standards.

### **Immunity**

Equipment hosting the HFBR-5923AL modules will be subjected to radio-frequency electromagnetic fields in some environments. The transceivers have good immunity to such fields due to their shielded design.

### **Electromagnetic Interference (EMI)**

Most equipment designs utilizing these high-speed transceivers from Agilent Technologies will be required to meet the requirements of FCC in the United States, CENELEC EN55022 (CISPR 22) in Europe and VCCI in Japan. The metal housing and shielded design of the HFBR-5923AL minimize the EMI challenge facing the host equipment designer. These transceivers provide superior EMI performance. This greatly assists the designer in the management of the overall system EMI performance.

### **Eye Safety**

These 850 nm VCSEL-based transceivers provide Class 1 eye safety by design. Agilent Technologies has tested the transceiver design for compliance with the requirements listed in Table 1: Regulatory Compliance, under normal operating conditions and under a single fault condition.

### **Flammability**

The HFBR-5923AL VCSEL transceiver housing is made of metal and high strength, heat resistant, chemically resistant, and UL 94V-0 flame retardant plastic.

### Caution

There are no user serviceable parts nor is any maintenance required for the HFBR-5923AL. All adjustments are made at the factory before shipment to our customers. Tampering with or

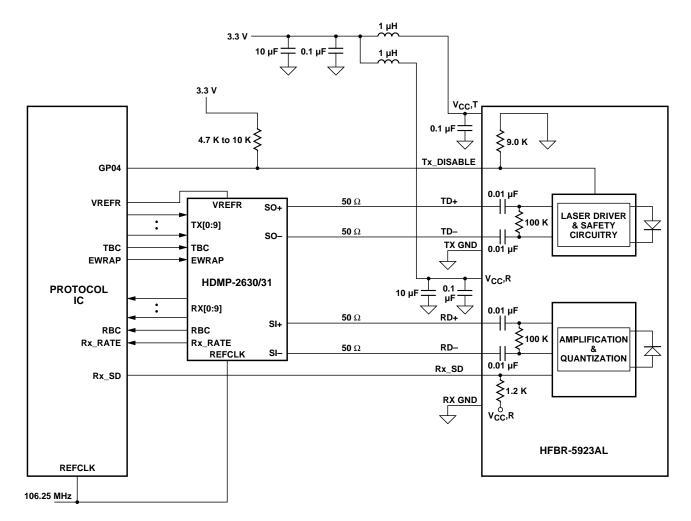

modifying the performance of the HFBR-5923AL will result in voided product warranty. It may also result in improper operation of the HFBR-5923AL circuitry, and possible overstress of the laser source. Device degradation or product failure may result. Connection of the HFBR-5923AL to a non-approved optical source, operating above the recommended absolute maximum conditions or operating the HFBR-5923AL in a manner inconsistent with its design and function may result in hazardous radiation exposure and may be considered an act of modifying or manufacturing a laser product. The person(s) performing such an act is required by law to recertify and re-identify the laser product under the provisions of U.S. 21 CFR (Subchapter J) and the TUV.

### **Ordering Information**

Please contact your local field sales engineer or one of Agilent Technologies franchised distributors for ordering information. For technical information regarding this product, including the MSA, please visit Agilent Technologies Semiconductors Products Website at www.agilent.com/view/fiber. Use the quick search feature to search for this part number. You may also contact Agilent Technologies Semiconductor Products Customer Response Center at 1-800-235-0312.

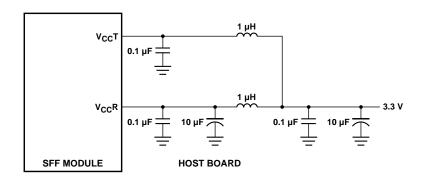

**Table 1. Regulatory Compliance** 

Feature	Test Method	Performance
Electrostatic Discharge (ESD) to the Electrical Pins	MIL-STD-883C Method 3015.4	Class 2 (> 2000 V)
Electrostatic Discharge (ESD) to the Duplex LC Receptacle	Variation of IEC 61000-4-2	Typically withstand at least 25 kV without damage when the duplex LC connector receptacle is contacted by a Human Body Model probe.
Electromagnetic Interference (EMI)	FCC Class B CENELEC EN55022 Class B (CISPR 22A) VCCI Class 1	System margins are dependent on customer board and chassis design.
Immunity	Variation of IEC 61000-4-3	Typically shows a negligible effect from a 10 V/m field swept from 80 to 1000 MHz applied to the transceiver without a chassis enclosure.
Eye Safety	US FDA CDRH AEL Class 1 EN(IEC)60825-1,2, EN60950 Class 1	CDRH file 9720151 TUV file R2079009
Component Recognition	Underwriters Laboratories and Canadian Standards Association Joint Component Recognition for Information Technology Equipmen including Electrical Business Equipment.	UL file E173874 t

NOTE: Tx\_FAULT REQUIRED FOR 2 x 6 MODULE ONLY.

NOTE: INDUCTORS MUST HAVE LESS THAN 1  $\Omega$  SERIES RESISTANCE PER MSA.

Figure 4. MSA recommended power supply filter.

**Table 2. Pin Description** 

Pin	Name Function/Description		MSA Notes
1	V <sub>EE</sub> R	Receiver Ground	1
2	V <sub>CC</sub> R	Receiver Power –3.3 V ±5%	5
3	SD	Signal Detect – Low indicates Loss of Signal	3
4	RD-	Inverse Received Data Out	4
5	RD+	Received Data Out	4
6	V <sub>CC</sub> T	Transmitter Power –3.3 V ±5%	5
7	V <sub>EE</sub> T	Transmitter Ground	1
8	TX Disable	Transmitter Disable – Module disables on High	2
9	TD+	Transmitter Data In	6
10	TD-	Inverse Transmitter Data In	6

### Notes

- 1. Transmitter and Receiver Ground are common in the internal module PCB. They are electrically connected to signal ground within the module, and to the housing shield (see Note 5 in Figure 7c). This housing shield is electrically isolated from the nose shield which is connected to chassis ground (see Note 4 in Figure 7c).
- 2. TX disable input is used to shut down the laser output per the state table below. It is pulled down internally within the module with a 9.0 KΩ resistor.

- 3. SD (Signal Detect) is a normally high LVTTL output. When high it indicates that the received optical power is adequate for normal operation.

  When Low, it indicates that the received optical power is below the worst case receiver sensitivity, a fault has occurred, and the link is no longer valid.
- 4. RD-/+: These are the differential receiver outputs. They are AC coupled 100  $\Omega$  differential lines which should be terminated with 100  $\Omega$  differential at the user SerDes. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 400 and 2000 mV differential (200 1000 mV single ended) when properly terminated. These levels are compatible with CML and LVPECL voltage swings.
- $5. V_{CC}R$  and  $V_{CC}T$  are the receiver and transmitter power supplies. They are defined as 3.135 3.465 V at the PTH connector pin. The maximum supply current is 200 mA.
- 6. TD-/+: These are the differential transmitter inputs. They are AC coupled differential lines with 100 Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of 400 2400 mV (200 1200 mV single ended), though it is recommended that values between 400 and 1200 mV differential (200 600 mV single ended) be used for best EMI performance. These levels are compatible with CML and LVPECL.

**Table 3. Absolute Maximum Ratings** 

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Notes
Storage Temperature	T <sub>S</sub>	-40		+100	°C	1
Case Temperature	T <sub>C</sub>	0		+85	°C	1, 2
Relative Humidity	RH	5		95	%	1
Supply Voltage	V <sub>CC</sub> T,R	-0.5		4	V	1, 2
Data/Control Input Voltage	VI	-0.5		V <sub>CC</sub> + 0.3	V	1

### Notes:

- 1. Absolute Maximum Ratings are those values beyond which damage to the device may occur if these limits are exceeded for other than a short period of time. See Reliability Data Sheets for specific reliability performance.
- 2. Between Absolute Maximum Ratings and the Recommended Operating Conditions, functional performance is not intended, device reliability is not implied, and damage to the device may occur over an extended period of time.

**Table 4. Recommended Operating Conditions** 

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Notes
Case Temperature	T <sub>C</sub>	0		70	°C	1
Module Supply Voltage	V <sub>CC</sub> T,R	3.135	3.3	3.465	V	1
Data Rate Fibre Channel			1.0625		Gb/s	1
Sense Output Current S <sub>D</sub>	I <sub>D</sub>		2.125	5.0	mA	1

### Note:

**Table 5. Process Compatibility** 

Parameter	Symbol	Minimum	Maximum	Unit	Notes
Hand Lead Solder Temperature/Time	T <sub>SOLD</sub> /t <sub>SOLD</sub>		+260/10	°C/sec	
Wave Solder and Aqueous Wash	$T_{SOLD}/t_{SOLD}$		+260/10	°C/sec	1

### Note:

<sup>1.</sup> Recommended operating conditions are those values outside of which functional performance is not intended, device reliability is not implied, and damage to the device may occur over an extended period of time. See Reliability Data Sheet for specific reliability performance.

<sup>1.</sup> Aqueous wash pressure < 110 psi.

**Table 6. Transceiver Electrical Characteristics** 

 $(V_{CC}T,R = 3.3 V \pm 5\%)$ 

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Notes
AC Electrical Characteristics						
Power Supply Noise Rejection (Peak-to-Peak)	PSNR		100		mV	1
DC Electrical Characteristics						
Module Supply Current	I <sub>CC</sub>		155	200	mA	
Power Dissipation	P <sub>DISS</sub>		510	693	mW	
Sense Outputs:						
Signal Detect [SD]	$V_{OH}$	2.4		$V_{CC}R + 0.3$	V	2
	V <sub>OL</sub>			0.4	V	
Control Inputs:						
Transmitter Disable [TX_DISABLE]	$V_{IH}$	2.0		$V_{CC} + 0.3$	V	3
	V <sub>IL</sub>	0.0		0.8	V	

### Notes:

- 1. MSA filter is required on host board 10 Hz to 2 MHz.
- 2. LVTTL, 1.2 k $\Omega$  internal pull-up resistor to V<sub>CC</sub>R.
- 3. 9.0  $K\Omega$  internal pull-down resistor to  $V_{EE}.$

**Table 7. Transmitter and Receiver Electrical Characteristics** 

 $(V_{CC}T,R = 3.3 V \pm 5\%)$ 

Parameter	Symbol	Minimum	Typical	Maximum	Unit	Notes
Data Input: Transmitter Differential Input Voltage (TD +/-)	VI	400		2400	mV	1
Data Output: Receiver Differential Output Voltage (RD +/-)	V <sub>0</sub>	400	650	2000	mV	2
Receive Data Rise and Fall Times (Receiver)	Trf			250	ps	3

### Notes

- 1. Internally AC coupled and terminated (100 ohm differential). These levels are compatible with CML and LVPECL voltage swings.
- 2. Internally AC coupled with an external 100 ohm differential load termination.
- 3. 20%-80% Rise and Fall times measured with a 500 MHz signal utilizing a 1010 data pattern.

**Table 8. Transmitter Optical Characteristics**

Contributed Random Jitter	RJ			0.177	UI	5, 6
(Transmitter) 1.0625 Gb/s				167	ps	
P <sub>OUT</sub> TX_DISABLE Asserted	P <sub>OFF</sub>			<b>–35</b>	dBm	

### Notes

- 1. Max  $P_{out}$  is the lesser of 0 dBm or Maximum allowable per Eye Safety Standard.
- 2. An OMA of 196 is approximately equal to an average power of -9 dBm assuming an Extinction Ratio of 9 dB.
- 3. An OMA of 156 is approximately equal to an average power of -10 dBm assuming an Extinction Ratio of 9 dB.
- 4. Contributed DJ is measured on an oscilloscope in average mode with 50% threshold and K28.5 pattern.
- 5. Contributed RJ is calculated for 1x10<sup>-12</sup> BER by multiplying the RMS jitter (measured on a single rise or fall edge) from the oscilloscope by 14. Per the FC-PI standard (Table 13 MM jitter output, note 1), the actual contributed RJ is allowed to increase above its limit if the actual contributed DJ decreases below its limits, as long as the component output DJ and TJ remain within their specified FC-PI maximum limits with the worst case specified component jitter input.
- 6. In a network link, each component's output jitter equals each component's input jitter combined with each component's contributed jitter.

  Contributed DJ adds in a linear fashion and contributed RJ adds in a RMS fashion. In the Fibre Channel FC-PI Rev 11 specification "6.3.3 MM jitter budget" section, there is a table specifying the input and output DJ and TJ for the transmitter at each data rate. In that table, RJ is found from TJ DJ, where the TX input jitter is noted as Delta T, and the TX output jitter is noted as Gamma T. Our component contributed jitter is such that, if the maximum specified input jitter is present, and is combined with our maximum contributed jitter, then we meet the specified maximum output jitter limits listed in the FC-PI MM jitter specification table.

### **Table 9. Receiver Optical Characteristics**

 $(V_{CC}T,R = 3.3 V \pm 5\%)$ 

Parameter		Symbol	Minimum	Typical	Maximum	Unit	Notes
Optical Powe	er	PIN			0	dBm	FC-PI Std
Min Optical N Amplitude (P 2.125 Gb/s	Modulation eak-to-Peak)	OMA	49	23		μW	FC-PI Std Note 1
Min Optical N Amplitude (P 1.0625 Gb/s	Modulation eak-to-Peak)	OMA	31	14		μW	FC-PI Std Note 2
Stressed Rec	eiver Sensitivity						
$62.5\mu m\; fiber$	2.125 Gb/s	OMA	109	25		μW	Note 3
	1.0625 Gb/s	OMA	67	13		μW	
50 μm fiber	2.125 Gb/s	OMA	96	26		μW	Note 4
•	1.0625 Gb/s	OMA	55	15		μW	
Return Loss			12			dB	FC-PI Std
Signal Detec	t – De-Assert	P <sub>D</sub>	-31		-17.5	dBm	
Signal Detec	t – Assert	PA			-17.0	dBm	
Signal Detec	t – Hysteresis	$P_A - P_D$	0.5	2.1	5	dB	

### Notes:

- 1. An OMA of 49 uW is approximately equal to an average power of -15dBm, and the OMA typical of 16 uW is approximately equal to an average power of -20 dBm, assuming an Extinction Ratio of 9dB. Sensitivity measurements are made at eye center with BER = 10E-12.
- 2. An OMA of 31 is approximately equal to an average power of -17 dBm assuming an Extinction Ratio of 9 dB.
- 3. 2.125 Gb/s Stressed receiver vertical eye closure penalty (ISI) min. is 1.26 dB for 50 µm fiber and 2.03 dB for 62.5 µm fiber. Stressed receiver DCD component min. (at TX) is 40 ps.
- 4. 1.0625 Gb/s Stressed receiver vertical eye closure penalty (ISI) min. is 0.96 dB for 50 μm fiber and 2.18 dB for 62.5 μm fiber. Stressed receiver DCD component min. (at TX) is 80 ps.
- 5. These average power values are specified with an Extinction Ratio of 9dB. The Signal Detect circuitry responds to OMA (peak-to-peak) power, not to average power.

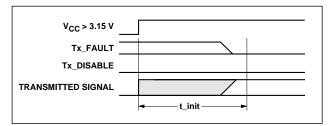

**Table 10. Transceiver Timing Characteristics** 

 $(V_{CC}T,R = 3.3 V \pm 5\%)$ 

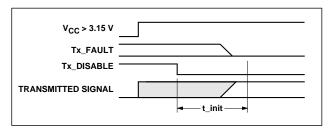

Parameter	Symbol	Minimum	Maximum	Unit	Notes
TX Disable Assert Time	t_off		10	μs	1
TX Disable Negate Time	t_on		1	ms	2
