#### Drive Features for LVC14A:

- High Output Drivers: ±24mA
- Reduced system switching noise

### DESCRIPTION:

The LVC14A Hex Schmitt-trigger inverter is built using advanced dual metal CMOS technology. This device contains six independent inverters and performs the Boolean function  $Y = \bar{A}$ .

Inputs can be driven from either 3.3V or 5V devices. This feature allows the use of this device as a translator in a mixed 3.3V/5V supply system.

The LVC14A has been designed with a ±24mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

### APPLICATIONS:

- 5V and 3.3V mixed voltage systems
- Data communication and telecommunication systems
