## ASSP

## Dual Serial Input <br> PLL Frequency Synthesizer

## MB15F02SL

## DESCRIPTION

The Fujitsu MB15F02SL is a serial input Phase Locked Loop (PLL) frequency synthesizer with a 1200 MHz and a 500 MHz prescalers. The 1200 MHz and 500 MHz prescalers have a dual modulus division ratio of 128/129 or $64 / 65$, and a $8 / 9$ or a $16 / 17$ enabling pulse swallowing operation.
The supply voltage range is between 2.4 V and 3.6 V . The MB15F02SL uses the latest BiCMOS process. As a result, the supply current is typically 3 mA at 2.7 V . A refined charge pump supplies a well-balanced output current of 1.5 mA or 6 mA . The charge pump current is selectable by serial data.
MB15F02SL is ideally suited for wireless mobile communications, such as GSM and PDC.

## ■ FEATURES

- High frequency operation: RF synthesizer: 1200 MHz max IF synthesizer: 500 MHz max
- Low power supply voltage: $\mathrm{Vcc}=2.4$ to 3.6 V
- Ultra Low power supply current: $\mathrm{Icc}=3.0 \mathrm{~mA}$ typ. ( $\mathrm{Vcc}=2.7 \mathrm{~V}, \mathrm{Ta}=+25^{\circ} \mathrm{C}$, in IF, RF locking state)

$$
\mathrm{Icc}=3.5 \mathrm{~mA} \text { typ. }\left(\mathrm{V} \mathrm{cc}=3.0 \mathrm{~V}, \mathrm{Ta}=+25^{\circ} \mathrm{C} \text {, in IF, RF locking state }\right)
$$

- Direct power saving function: Power supply current in power saving mode

Typ. $0.1 \mu \mathrm{~A}\left(\mathrm{Vcc}=3.0 \mathrm{~V}, \mathrm{Ta}=+25^{\circ} \mathrm{C}\right)$, $\mathrm{Max} .10 \mu \mathrm{~A}\left(\mathrm{~V}_{c c}=3.0 \mathrm{~V}\right)$

- Dual modulus prescaler: 1200 MHz prescaler ( $64 / 65,128 / 129$ )/500 MHz prescaler ( $8 / 9$ or 16/17)
- Serial input 14-bit programmable reference divider: $\mathrm{R}=3$ to 16,383
- Serial input programmable divider consisting of:
- Binary 7-bit swallow counter: 0 to 127
- Binary 11-bit programmable counter: 3 to 2,047
- Software selectable charge pump current
- On-chip phase control for phase comparator
- Operating temperature: $\mathrm{Ta}=-40$ to $+85^{\circ} \mathrm{C}$
- Pin compatible with MB15F02, MB15F02L

## PACKAGES

## PIN ASSIGNMENTS

## PIN DESCRIPTIONS

| Pin no. |  | Pin name | I/O | Descriptions |
| :---: | :---: | :---: | :---: | :---: |
| SSOP-16 | BCC-16 |  |  |  |
| 1 | 16 | GNDif | - | Ground for RF-PLL section. |
| 2 | 1 | OSCin | I | The programmable reference divider input. TCXO should be connected with a AC coupling capacitor. |
| 3 | 2 | GNDIF | - | Ground for the IF-PLL section. |
| 4 | 3 | finiF | 1 | Prescaler input pin for the IF-PLL. Connection to an external VCO should be via AC coupling. |
| 5 | 4 | V ccil | - | Power supply voltage input pin for the IF-PLL section. |
| 6 | 5 | LD/fout | 0 | Lock detect signal output (LD)/phase comparator monitoring output (fout). <br> The output signal is selected by LDS bit in a serial data. <br> LDS bit = " H "; outputs fout signal <br> LDS bit = "L" ; outputs LD signal |
| 7 | 6 | PSIF | 1 | Power saving mode control for the IF-PLL section. This pin must be set at "L" during Power-ON. (Open is prohibited.) <br> PSIF = "H" ; Normal mode <br> PS |
| 8 | 7 | Doif | O | Charge pump output for the IF-PLL section. <br> Phase characteristics of the phase detector can be selected via programming of the FC-bit. |
| 9 | 8 | Dorf | 0 | Charge pump output for the RF-PLL section. Phase characteristics of the phase detector can be selected via programming of the FC-bit. |
| 10 | 9 | PSRF | 1 | Power saving mode control for the RF-PLL section. This pin must be set at "L" during Power-ON. (Open is prohibited.) <br> PSRF = "H" ; Normal mode <br> PS $\mathrm{PF}=$ " L "; 'Power saving mode |
| 11 | 10 | XfinRF | 1 | Prescaler complementary input for the RF-PLL section. This pin should be grounded via a capacitor. |
| 12 | 11 | V CCRF | - | Power supply voltage input pin for the RF-PLL section, the shift register and the oscillator input buffer. When power is OFF, latched data of RF-PLL is lost. |
| 13 | 12 | $\mathrm{fingF}_{\text {R }}$ | 1 | Prescaler input pin for the RF-PLL. Connection to an external VCO should be via AC coupling. |
| 14 | 13 | LE | 1 | Load enable signal inpunt (with a schmitt trigger input buffer.) When the LE bit is set " H ", data in the shift register is transferred to the corresponding latch according to the control bit in the serial data. |
| 15 | 14 | Data | 1 | Serial data input (with a schmitt trigger input buffer.) Data is transferred to the corresponding latch (IF-ref counter, IF-prog. counter, RF-ref. counter, RF-prog. counter) according to the control bit in the serial data. |
| 16 | 15 | Clock | 1 | Clock input for the 23-bit shift register (with a schmitt trigger input buffer.) One bit of data is shifted into the shift register on a rising edge of the clock. |

## BLOCK DIAGRAM

## ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Rating |  | Unit | Remark |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  |  | Min. | Max. |  |  |
| Power supply voltage | $\mathrm{V}_{\mathrm{cc}}$ | -0.5 | +4.0 | V |  |
| Input voltage | $\mathrm{V}_{\mathrm{l}}$ | -0.5 | $\mathrm{~V}_{\mathrm{cc}}+0.5$ | V |  |
| Output voltage | $\mathrm{V} \circ$ | GND | V cc | V |  |
| Storage temperature | Tstg | -55 | +125 | ${ }^{\circ} \mathrm{C}$ |  |

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## ■ RECOMMENDED OPERATING CONDITIONS

| Parameter | Symbol | Value |  |  | Unit | Remark |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Min. | Typ. | Max. |  |  |
| Power supply voltage | $\mathrm{V}_{\mathrm{cc}}$ | 2.4 | 3.0 | 3.6 | V |  |
| Input voltage | V C | GND | - | $\mathrm{V}_{\mathrm{cc}}$ | V |  |
| Operating temperature | Ta | -40 | - | +85 | ${ }^{\circ} \mathrm{C}$ |  |

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.
Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.
No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

## MB15F02SL

## FUNCTIONAL DESCRIPTION

The divide ratio can be calculated using the following equation:
fvoo $=\{(M \times N)+A\} \times$ fosc $\div R \quad(A<N)$
fvco: Output frequency of external voltage controlled oscillator (VCO)
M : Preset divide ratio of dual modulus prescaler (8 or 16 for IF-PLL, 64 or 128 for RF-PLL)
N : Preset divide ratio of binary 11-bit programmable counter (3 to 2,047)
A : Preset divide ratio of binary 7 -bit swallow counter $(0 \leq A \leq 127)$
fosc: Reference oscillation frequency
$R$ : Preset divide ratio of binary 14-bit programmable reference counter (3 to 16,383)

## Serial Data Input

Serial data is entered using three pins, Data pin, Clock pin, and LE pin. Programmable dividers of IF/RF-PLL sections, programmable reference dividers of IF/RF-PLL sections are controlled individually.
Serial data of binary data is entered through Data pin.
On rising edge of Clock, one bit of serial data is transferred into the shift register. When the LE signal is taken high, the data stored in the shift register is transferred to one of latch of them depending upon the control bit data setting.

Table 1. Control Bit

| L | $\pm 1.5 \mathrm{~mA}$ |

## Power Saving Mode (Intermittent Mode Control Circuit)

Table 10. PS Pin Setting

| PS pin | Status |
| :---: | :--- |
| $H$ | Normal mode |
| L | Power saving mode |

The intermittent mode control circuit reduces the PLL power consumption.
By setting the PS pin low, the device enters into the power saving mode, reducing the current consumption. See the Electrical Characteristics chart for the specific value.
The phase detector output, Do, becomes high impedance.
For the dual PLL, the lock detector, LD, is as shown in the LD Output Logic table.
Setting the PS pin high, releases the power saving mode, and the device works normally.
The intermittent mode control circuit also ensures a smooth startup when the device returns to normal operation. When the PLL is returned to normal operation, the phase comparator output signal is unpredictable. This is because of the unknown relationship between the comparison frequency (fp) and the reference frequency (fr) which can cause a major change in the comparator output, resulting in a VCO frequency jump and an increase in lockup time. To prevent a major VCO frequency jump, the intermittent mode control circuit limits the magnitude of the error signal from the phase detector when it returns to normal operation.

Note: • When power $\left(V_{c c}\right)$ is first applied, the device must be in standby mode, $\mathrm{PS}=$ Low, for at least $1 \mu \mathrm{~s}$.

- PS pin must be set at "L" for Power-ON.

## MB15F02SL

## SERIAL DATA INPUT TIMING

On rising edge of the clock, one bit of the data is transfered into the shift register.

| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{t}_{5}$ | 100 | - | - | ns |
| $\mathrm{t}_{6}$ | 20 | - | - | ns |
| $\mathrm{t}_{7}$ | 100 | - | - | ns |

Note: LE should be "L" when the data is transferred into the shift register.

## PHASE COMPARATOR OUTPUT WAVEFORM

LD Output Logic Table

| IF-PLL section | RF-PLL section | LD output |
| :--- | :--- | :---: |
| Locking state/Power saving state | Locking state/Power saving state | H |
| Locking state/Power saving state | Unlocking state | L |
| Unlocking state | Locking state/Power saving state | L |
| Unlocking state | Unlocking state | L |

Notes: - Phase error detection range $=-2 \pi$ to $+2 \pi$

- Pulses on Doif/RF signals are output to prevent dead zone.
- LD output becomes low when phase error is twu or more.
- LD output becomes high when phase error is twl or less and continues to be so for three cycles or more.
- twu and twl depend on OSCin input frequency as follows.
$t w u \geq 2 / f o s c:$ i. e. twu $\geq 156.3 \mathrm{~ns}$ when fosc $=12.8 \mathrm{MHz}$
$t w u \leq 4 / f o s c:$ i. e. $\mathrm{twL} \leq 312.5 \mathrm{~ns}$ when fosc $=12.8 \mathrm{MHz}$

## MB15F02SL

## MEASURMENT CIRCUIT (for Measuring Input Sensitivity fin/OSCin)

Note: SSOP-16

## MB15F02SL

## TYPICAL CHARACTERISTICS

1. fin input impedance

## MB15F02SL

2. OSCin input sensitivity

## MB15F02SL

## 3. Do output current (RF-PLL)

- 1.5 mA mode

- 6.0 mA mode

## MB15F02SL

4. Do output current (IF-PLL)

- 1.5 mA mode

- 6.0 mA mode

## MB15F02SL

5. fin input impedance

## MB15F02SL

6. OSCin input impedance

## APPLICATION EXAMPLE

## USAGE PRECAUTIONS

(1) Vccrf must equal Vccir.

Even if either RF-PLL or IF-PLL is not used, power must be supplied to both $V_{\text {ccra }}$ and $V_{\text {ccif }}$ to keep them equal. It is recommended that the non-use PLL is controlled by power saving function.
(2) To protect against damage by electrostatic discharge, note the following handling precautions:
-Store and transport devices in conductive containers.
-Use properly grounded workstations, tools, and equipment.
-Turn off power before inserting or removing this device into or from a socket.
-Protect leads with conductive sheet, when transporting a board mounted device.

All Rights Reserved.
The contents of this document are subject to change without notice.
Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

The contents of this document may not be reproduced or copied without the permission of FUJITSU LIMITED.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipments, industrial, communications, and measurement equipments, personal or household devices, etc.). CAUTION:
Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
