### Description

The Hitachi HM5112805F, HM5113805F are 128M-bit dynamic RAMs organized as 16,777,216-word × 8-bit. They have realized high performance and low power by employing CMOS process technology. HM5112805F, HM5113805F offer Extended Data Out (EDO) Page Mode as a high speed access mode. They are packaged in 32-pin plastic TSOPII.

### Features

- Single 3.3 V supply: 3.3 V ± 0.3 V
- Access time: 60 ns (max)
- Power dissipation
  - Active: 720 mW (max) (HM5112805F)  
792 mW (max) (HM5113805F)
  - Standby : 3.6 mW (max) (CMOS interface)  
: 1.8 mW (max) (CMOS interface) (L-version)
- EDO page mode capability
- Refresh cycles
  - $\overline{\text{RAS}}$ -only refresh
    - 8192 cycles/64 ms (HM5112805F)
    - 4096 cycles/64 ms (HM5113805F)
  - CBR/Hidden refresh
    - 4096 cycles/64 ms (HM5112805F, HM5113805F)

---

## HM5112805F-6, HM5113805F-6

---

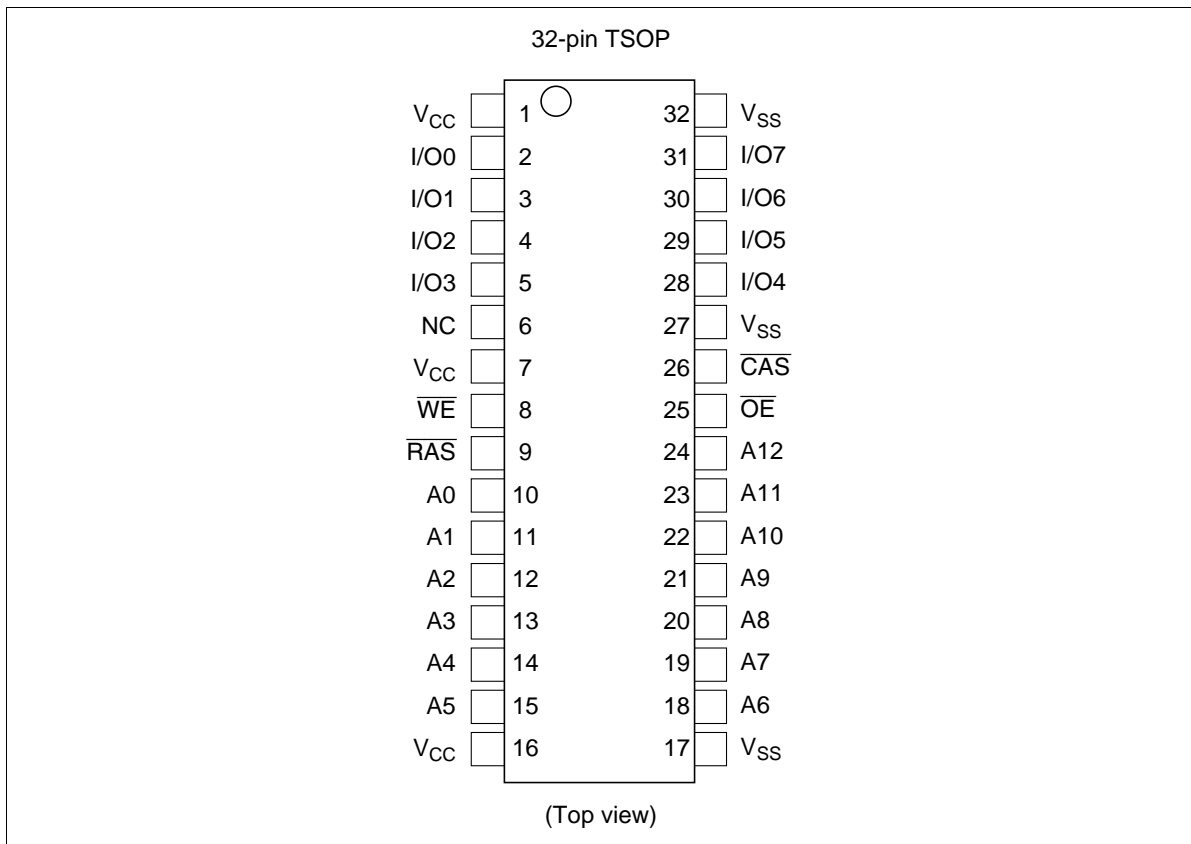

- 4 variations of refresh
  - $\overline{\text{RAS}}$ -only refresh
  - $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$  refresh
  - Hidden refresh
  - Self refresh (L-version)
- Battery backup operation (L-version)

### Ordering Information

| Type No.        | Access time | Package                                   |
|-----------------|-------------|---|
| HM5112805FTD-6  | 60 ns       | 400-mil 32-pin plastic TSOP II (TTP-32DF) |
| HM5112805FLTD-6 | 60 ns       |   |
| HM5113805FTD-6  | 60 ns       |   |
| HM5113805FLTD-6 | 60 ns       |   |

## Operation Table

| $\overline{\text{RAS}}$ | $\overline{\text{CAS}}$ | $\overline{\text{WE}}$ | $\overline{\text{OE}}$ | I/O 0 to I/O 7 | Operation  |
|-------------------------|-------------------------|------------------------|------------------------|----------------|--|
| H                       | ×                       | ×                      | ×                      | High-Z         | Standby  |
| L                       | L                       | H                      | L                      | Dout           | Read cycle   |
| L                       | L                       | L* <sup>2</sup>        | ×                      | Din            | Early write cycle  |
| L                       | L                       | L* <sup>2</sup>        | H                      | Din            | Delayed write cycle  |
| L                       | L                       | H to L                 | L to H                 | Dout/Din       | Read-modify-write cycle  |
| L                       | H                       | ×                      | ×                      | High-Z         | $\overline{\text{RAS}}$ -only refresh cycle                            |
| H to L                  | L                       | H                      | ×                      | High-Z         | $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh cycle |
| L                       | L                       | H                      | H                      | High-Z         | Read cycle (Output disabled)   |

Notes: 1. H:  $V_{IH}$  (inactive), L:  $V_{IL}$  (active), ×:  $V_{IH}$  or  $V_{IL}$

2.  $t_{WCS} \geq 0$  ns: Early write cycle

$t_{WCS} < 0$  ns: Delayed write cycle

## Absolute Maximum Ratings

| Parameter  | Symbol    | Value  | Unit |
|--|-----------|--|------|
| Terminal voltage on any pin relative to $V_{SS}$ | $V_T$     | -0.5 to $V_{CC} + 0.5$ ( $\leq 4.6$ V (max)) | V    |
| Power supply voltage relative to $V_{SS}$        | $V_{CC}$  | -0.5 to +4.6                                 | V    |
| Short circuit output current                     | $I_{out}$ | 50   | mA   |
| Power dissipation                                | $P_T$     | 1.0  | W    |
| Storage temperature                              | $T_{stg}$ | -55 to +125                                  | °C   |

## DC Operating Conditions

| Parameter                 | Symbol   | Min  | Typ | Max            | Unit | Notes |
|---------------------------|----------|------|-----|----------------|------|-------|
| Supply voltage            | $V_{CC}$ | 3.0  | 3.3 | 3.6            | V    | 1, 2  |
|                           | $V_{SS}$ | 0    | 0   | 0              | V    | 2     |
| Input high voltage        | $V_{IH}$ | 2.0  | —   | $V_{CC} + 0.3$ | V    | 1     |
| Input low voltage         | $V_{IL}$ | -0.3 | —   | 0.8            | V    | 1     |
| Ambient temperature range | $T_a$    | 0    | —   | 70             | °C   |       |

Notes: 1. All voltage referred to  $V_{SS}$ .

2. The supply voltage with all  $V_{CC}$  pins must be on the same level. The supply voltage with all  $V_{SS}$  pins must be on the same level.

## DC Characteristics (HM5112805F)

| Parameter   | Symbol     | HM5112805F |          | Unit          | Test conditions   |

4.  $V_{IH} \geq V_{CC} - 0.2 \text{ V}$ ,  $0 \text{ V} \leq V_{IL} \leq 0.2 \text{ V}$ .

## HM5112805F-6, HM5113805F-6

**Capacitance** ( $T_a = 25^\circ\text{C}$ ,  $V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$ )

| Parameter                              | Symbol    | Typ | Max | Unit | Notes |
|--|-----------|-----|-----|------|-------|
| Input capacitance (Address)            | $C_{I1}$  | —   | 7   | pF   | 1     |
| Input capacitance (Clocks)             | $C_{I2}$  | —   | 7   | pF   | 1     |
| Output capacitance (Data-in, Data-out) | $C_{I/O}$ | —   | 8   | pF   | 1, 2  |

Notes : 1. Capacitance measured with Boonton Meter or effective capacitance measuring method.

2.  $\overline{\text{RAS}}$  and  $\overline{\text{CAS}} = V_{IH}$  to disable Dout.

**AC Characteristics** ( $T_a = 0$  to  $+70^\circ\text{C}$ ,  $V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$ ,  $V_{SS} = 0\text{ V}$ ) \*1, \*2, \*19

**Test Conditions**

- Input rise and fall time: 2 ns
- Input pulse levels:  $V_{IL} = 0\text{ V}$ ,  $V_{IH} = 3.0\text{ V}$
- Input timing reference levels: 0.8 V, 2.0 V
- Output timing reference levels: 0.8 V, 2.0 V
- Output load: 1 TTL gate +  $C_L$  (100 pF) (Including scope and jig)

**Read, Write, Read-Modify-Write and Refresh Cycles** (Common parameters)

**HM5112805F/HM5113805F**

Self Refresh Mode (L-version)

| Parameter   | Symbol            | HM5112805FL/HM5113805FL |     | Unit          | Notes |
|---|-------------------|-------------------------|-----|---------------|-------|
|   |                   | Min                     | Max |               |       |
| $\overline{\text{RAS}}$ pulse width (self refresh)    | $t_{\text{RASS}}$ | 100                     | —   | $\mu\text{s}$ | 25    |
| $\overline{\text{RAS}}$ precharge time (self refresh) | $t_{\text{RPS}}$  | 110                     | —   | ns            | 25    |
| $\overline{\text{CAS}}$ hold time (self refresh)      | $t_{\text{CHS}}$  | -50                     | —   | ns            |       |

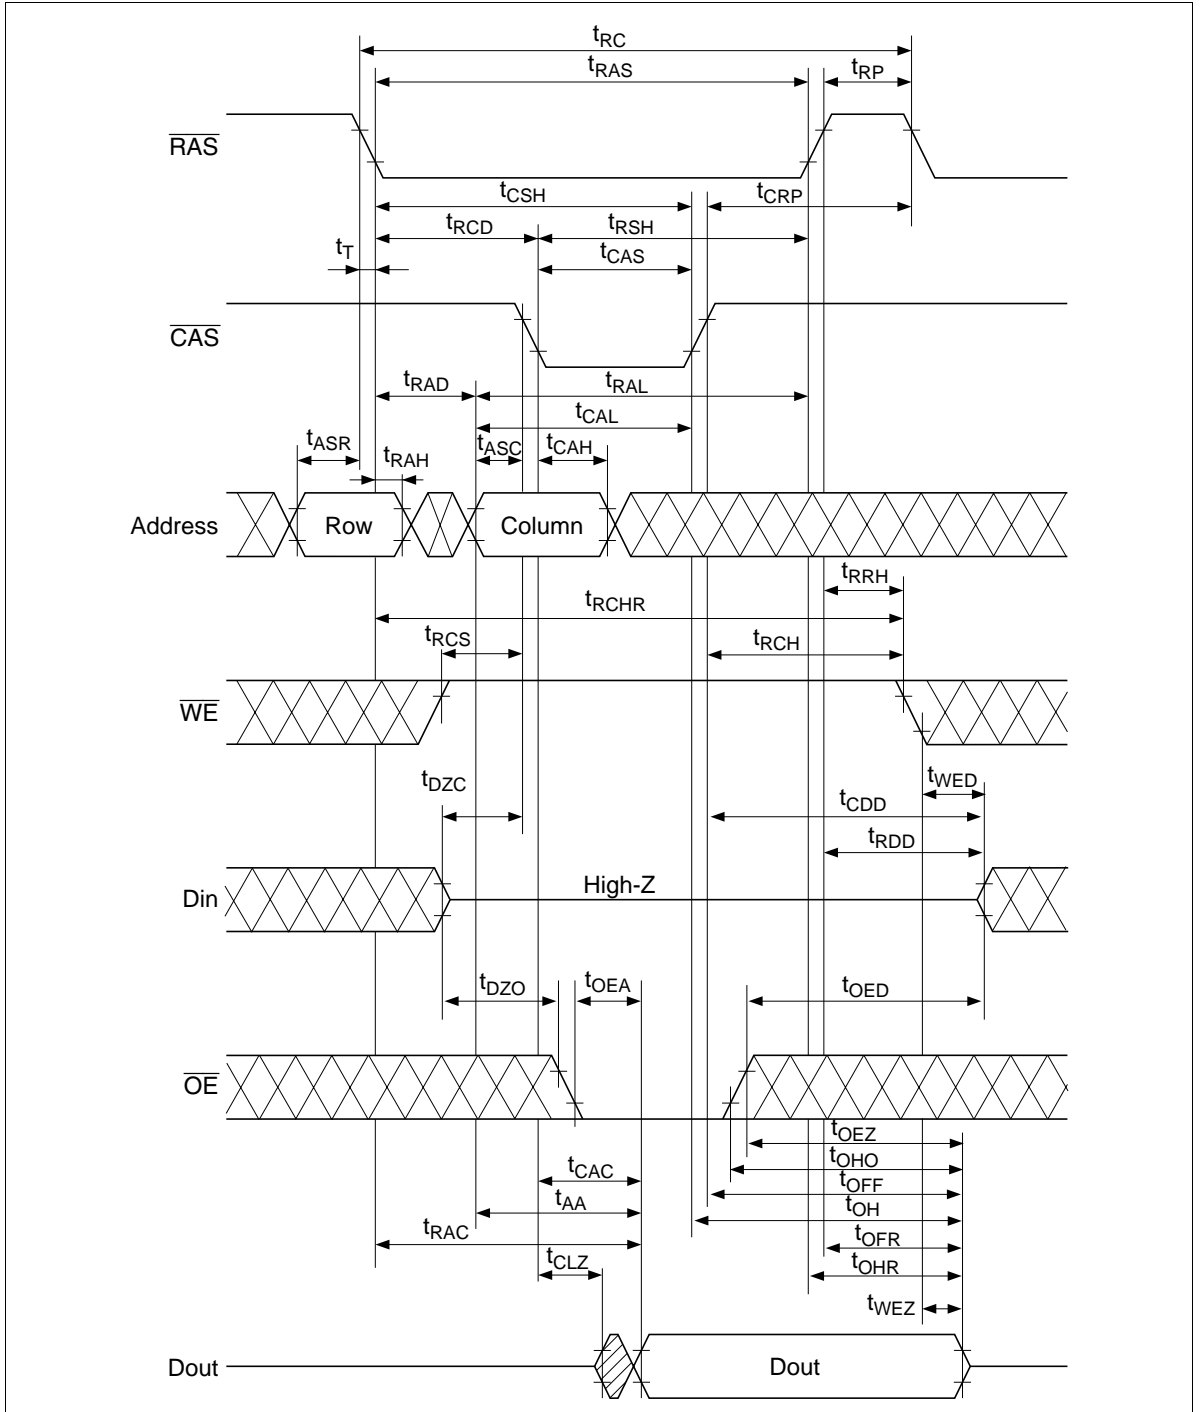

- Notes:
- AC measurements assume  $t_f = 2 \text{ ns}$ .
  - An initial pause of  $200 \mu\text{s}$  is required after power up followed by a minimum of eight initialization cycles (any combination of cycles containing  $\overline{\text{RAS}}$ -only refresh or  $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$  refresh).
  - Operation with the  $t_{\text{RCD}}$  (max) limit insures that  $t_{\text{RAC}}$  (max) can be met,  $t_{\text{RCD}}$  (max) is specified as a reference point only; if  $t_{\text{RCD}}$  is greater than the specified  $t_{\text{RCD}}$  (max) limit, then the access time is controlled exclusively by  $t_{\text{CAC}}$ .
  - Operation with the  $t_{\text{RAD}}$  (max) limit insures that  $t_{\text{RAC}}$  (max) can be met,  $t_{\text{RAD}}$  (max) is specified as a reference point only; if  $t_{\text{RAD}}$  is greater than the specified  $t_{\text{RAD}}$  (max) limit, then access time is controlled exclusively by  $t_{\text{AA}}$ .
  - Either  $t_{\text{OED}}$  or  $t_{\text{CDD}}$  must be satisfied.
  - Either  $t_{\text{DZO}}$  or  $t_{\text{DZC}}$  must be satisfied.
  - $V_{\text{IH}}$  (min) and  $V_{\text{IL}}$  (max) are reference levels for measuring timing of input signals. Also, transition times are measured between  $V_{\text{IH}}$  (min) and  $V_{\text{IL}}$  (max).
  - Assumes that  $t_{\text{RCD}} \leq t_{\text{RCD}}$  (max) and  $t_{\text{RAD}} \leq t_{\text{RAD}}$  (max). If  $t_{\text{RCD}}$  or  $t_{\text{RAD}}$  is greater than the maximum recommended value shown in this table,  $t_{\text{RAC}}$  exceeds the value shown.
  - Measured with a load circuit equivalent to 1 TTL loads and  $100 \text{ pF}$ .
  - Assumes that  $t_{\text{RCD}} \geq t_{\text{RCD}}$  (max) and  $t_{\text{RCD}} + t_{\text{CAC}}$  (max)  $\geq t_{\text{RAD}} + t_{\text{AA}}$  (max).
  - Assumes that  $t_{\text{RAD}} \geq t_{\text{RAD}}$  (max) and  $t_{\text{RCD}} + t_{\text{CAC}}$  (max)  $\leq t_{\text{RAD}} + t_{\text{AA}}$  (max).
  - Either  $t_{\text{RCH}}$  or  $t_{\text{RRH}}$  must be satisfied for a read cycles.
  - $t_{\text{OFF}}$  (max),  $t_{\text{OEZ}}$  (max),  $t_{\text{WEZ}}$  (max) and  $t_{\text{OFR}}$  (max) define the time at which the outputs achieve the open circuit condition and are not referred to output voltage levels.
  - $t_{\text{WCS}}$ ,  $t_{\text{RWD}}$ ,  $t_{\text{CWD}}$ ,  $t_{\text{AWD}}$  and  $t_{\text{CPW}}$  are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only; if  $t_{\text{WCS}} \geq t_{\text{WCS}}$  (min), the cycle is an early write cycle and the data out pin will remain open circuit (high impedance) throughout the entire cycle; if  $t_{\text{RWD}} \geq t_{\text{RWD}}$  (min),  $t_{\text{CWD}} \geq t_{\text{CWD}}$  (min), and  $t_{\text{AWD}} \geq t_{\text{AWD}}$  (min), or  $t_{\text{CWD}} \geq t_{\text{CWD}}$  (min),  $t_{\text{AWD}} \geq t_{\text{AWD}}$  (min) and  $t_{\text{CPW}} \geq t_{\text{CPW}}$  (min), the cycle is a read-modify-write and the data output will contain data read from the selected cell; if neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminate.
  - $t_{\text{DS}}$  and  $t_{\text{DH}}$  are referred to  $\overline{\text{CAS}}$  leading edge in early write cycles and to  $\overline{\text{WE}}$  leading edge in delayed write or read-modify-write cycles.
  - $t_{\text{RASP}}$  defines  $\overline{\text{RAS}}$  pulse width in EDO page mode cycles.
  - Access time is determined by the longest among  $t_{\text{AA}}$ ,  $t_{\text{CAC}}$  and  $t_{\text{CPA}}$ .
  - In delayed write or read-modify-write cycles,  $\overline{\text{OE}}$  must disable output buffer prior to applying data to the device.
  - When output buffers are enabled once, sustain the low impedance state until valid data is obtained. When output buffer is turned on and off within a very short time, generally it causes large  $V_{\text{CC}}/V_{\text{SS}}$  line noise, which causes to degrade  $V_{\text{IH}}$  min/ $V_{\text{IL}}$  max level.

20.  $t_{\text{HPC}}$  (min) can be achieved during a series of EDO page mode write cycles or EDO page mode read cycles. If both write and read operation are mixed in a EDO page mode  $\overline{\text{RAS}}$  cycle (EDO page mode mix cycle (1), (2)), minimum value of  $\overline{\text{CAS}}$  cycle ( $t_{\text{CAS}} + t_{\text{CP}} + 2 t_{\text{T}}$ ) becomes greater than the specified  $t_{\text{HPC}}$  (min) value. The value of  $\overline{\text{CAS}}$  cycle time of mixed EDO page mode is shown in EDO page mode mix cycle (1) and (2).
21. Data output turns off and becomes high impedance from later rising edge of  $\overline{\text{RAS}}$  and  $\overline{\text{CAS}}$ . Hold time and turn off time are specified by the timing specifications of later rising edge of  $\overline{\text{RAS}}$  and  $\overline{\text{CAS}}$  between  $t_{\text{OHR}}$  and  $t_{\text{OH}}$  and between  $t_{\text{OFR}}$  and  $t_{\text{OFF}}$ .
22.  $t_{\text{DOH}}$  defines the time at which the output level go cross.  $V_{\text{OL}} = 0.8 \text{ V}$ ,  $V_{\text{OH}} = 2.0 \text{ V}$  of output timing reference level.
23. Before and after self refresh mode, execute CBR refresh to all refresh addresses in or within 64 ms period on the condition a and b below.
  - a. Enter self refresh mode within 15.6  $\mu\text{s}$  after either burst refresh or distributed refresh at equal interval to all refresh addresses are completed.
  - b. Start burst refresh or distributed refresh at equal interval to all refresh addresses within 15.6 $\mu\text{s}$  after exiting from self refresh mode.
24. In case of entering from  $\overline{\text{RAS}}$ -only-refresh, it is necessary to execute CBR refresh before and after self refresh mode according as note 23.
25. At  $t_{\text{RASS}} > 100 \mu\text{s}$ , self refresh mode is activated, and not activated at  $t_{\text{RASS}} < 10 \mu\text{s}$ . It is undefined within the range of  $10 \mu\text{s} \leq t_{\text{RASS}} \leq 100 \mu\text{s}$ . For  $t_{\text{RASS}} \geq 10 \mu\text{s}$ , it is necessary to satisfy  $t_{\text{RPS}}$ .
26. XXX: H or L (H:  $V_{\text{IH}}(\text{min}) \leq V_{\text{IN}} \leq V_{\text{IH}}(\text{max})$ , L:  $V_{\text{IL}}(\text{min}) \leq V_{\text{IN}} \leq V_{\text{IL}}(\text{max})$ )  
/////: Invalid Dout  
When the address, clock and input pins are not described on timing waveforms, their pins must be applied  $V_{\text{IH}}$  or  $V_{\text{IL}}$ .

## Cautions

1. Hitachi neither warrants nor grants licenses of any rights of Hitachi's or any third party's patent, copyright, trademark, or other intellectual property rights for information contained in this document. Hitachi bears no responsibility for problems that may arise with third party's rights, including intellectual property rights, in connection with use of the information contained in this document.
2. Products and product specifications may be subject to change without notice. Confirm that you have received the latest product standards or specifications before final design, purchase or use.
3. Hitachi makes every attempt to ensure that its products are of high quality and reliability. However, contact Hitachi's sales office before using the product in an application that demands especially high quality and reliability or where its failure or malfunction may directly threaten human life or cause risk of bodily injury, such as aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment or medical equipment for life support.
4. Design your application so that the product is used within the ranges guaranteed by Hitachi particularly for maximum rating, operating supply voltage range, heat radiation characteristics, installation conditions and other characteristics. Hitachi bears no responsibility for failure or damage when used beyond the guaranteed ranges. Even within the guaranteed ranges, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Hitachi product does not cause bodily injury, fire or other consequential damage due to operation of the Hitachi product.
5. This product is not designed to be radiation resistant.
6. No one is permitted to reproduce or duplicate, in any form, the whole or part of this document without written approval from Hitachi.
7. Contact Hitachi's sales office for any questions regarding this document or Hitachi semiconductor products.
