

Typical Applications

The HMC258LC3B is ideal for:

- Point to Point Radios
- VSAT and SATCOM
- Test & Measurement Equipment
- Military & Space

Features

- Integrated LO Amplifier: 0 dBm Input
- Sub-Harmonically Pumped (x2) LO
- High 2LO/RF Isolation: >45 dB
- Wide IF Bandwidth: DC - 3.5 GHz
- No External Matching Required
- RoHS Compliant 3x3mm Ceramic SMT Package

Functional Diagram

General Description

The HMC258LC3B is a 14.5 - 19.5 GHz surface mount sub-harmonically pumped (x2) MMIC mixer with an integrated LO amplifier in a SMT leadless ceramic package. At 45 dB the 2LO to RF isolation eliminates the need for additional filtering. The LO amplifier is a single bias (+5V) two stage design with only 0 dBm drive requirement. The HMC258LC3B requires no external matching components, making it ideal for integrated subsystem applications. Utilizing the HMC258LC3B eliminates the need for wire-bonding, thereby providing a consistent connection interface for the customer.

Pin Description

Pin Number	Function	Description	Interface Schematic
1, 4, 6, 10, 12	GND	Must be soldered to PCB RF ground.	
2	IF	IF Port. This pin is DC coupled and should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. Any applied DC voltage to this pin will result in die non-function and possible die failure.	
3	Vdd	Power Supply for the LO Amplifier. An external RF bypass capacitor of 100 - 330 pF is required as close to the package as possible.	
5	LO	LO Port. This pin is AC coupled and matched to 50 Ohms.	
7 - 9	N/C	This pin may be connected to the housing ground or left unconnected.	
11	RF	RF Port. This pin is AC coupled and matched to 50 Ohms.

[2] Circuit Board Material: Rogers 4350

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
