#### **Simplified Schematic**

The ZX76-31-PP+ parallel interface consists of 5 control bits that select the desired attenuation state, as shown in Table 1: Truth Table

Table 1. Truth Table								
Attenuation State	C16	C8	C4	C2	C1			
Reference	0	0	0	0	0			
1 (dB)	0	0	0	0	1			
2 (dB)	0	0	0	1	0			
4 (dB)	0	0	1	0	0			
8 (dB)	0	1	0	0	0

31 (dB)	1	1	1	1	1

The parallel interface timing requirements are defined by Figure 1 (Parallel Interface Timing Diagram) and Table 2 (Parallel Interface AC Characteristics), and switching speed.

For latched parallel programming the Latch Enable (LE) should be held LOW while changing attenuation state control values, then pulse LE HIGH to LOW (per Figure 1) to latch new attenuation state into device.

For direct parallel programming, the Latch Enable (LE) line should be pulled HIGH. Changing attenuation state control values will change device state to new attenuation. Direct mode is ideal for manual control of the device (using hardwire, switches, or jumpers).

Control cables for programming and CD with software can be ordered separately. For details see page 9.

Figure 1: Parallel Interface Timing Diagram

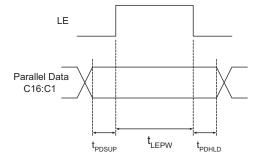

Table 2. Parallel Interface AC Characteristics								
Symbol	Min.	Units						
t <sub>LEPW</sub>	LE minimum pulse width	10	ns					
t <sub>PDSUP</sub>	Data set-up time before clock rising edge of LE	10	ns					
t <sub>PDHLD</sub>	Data hold time after clock falling edge of LE	10	ns					

#### **Power-up State**

When the attenuator powers up and LE is logic low, the nominal attenuation is set on 0 dB. When LE is logic high, the nominal attenuation selected upon control logics ( see Table 1 ).

#### **Recommended Accessories**

Two optional cable accessories with and without interface connector are available with ZX76-31-PP+, the ZX76-CP+ and ZX76-WP+.

ZX76-CP+ shielded cable with interface 25 pin D-type connector J4 and supplied software are used to control the ZX76-31-PP+ digital attenuator from a computer, using LPT port.

ZX76-WP+ shielded cable without interface 25 pin D-type connector enables customer to use the ZX76-31-PP+ digital attenuator in his own application. Cable length is 4.9 feet / 1.5 meters.

Note: Mini-Circuits can supply control cables with other options for the J4 connector and/or different cable lengths. Consult factory with your specific requirements.
