

**ULTRA-SMALL PACKAGE  
SLIM POLARIZED RELAY**

**GN RELAYS (AGN)**

**FEATURES**

- 1. Compact slim body saves space**  
Thanks to the small surface area of 5.7 mm × 10.6 mm .224 inch × .417 inch and low height of 9.0 mm .354 inch, the packaging density can be increased to allow for much smaller designs.
- 2. Outstanding surge resistance.**  
Surge breakdown voltage between contacts and coil:  
2,500 V 2×10 μs (Telcordia)  
Surge breakdown voltage between open contacts:  
1,500 V 10×160 μs (FCC part 68)
- 3. The use of twin crossbar contacts ensures high contact reliability.**  
AgPd contact is used because of its good sulfide resistance. Adopting low-gas molding material. Coil assembly molding technology which avoids generating volatile gas from coil.
- 4. Increased packaging density**  
Due to highly efficient magnetic circuit design, leakage flux is reduced and changes in electrical characteristics from components being mounted close-together are minimized. This all means a packaging density higher than ever before.
- 5. Nominal operating power: 140 mW**
- 6. Outstanding vibration and shock resistance.**  
Functional shock resistance: 750 m/s<sup>2</sup>  
Destructive shock resistance: 1,000 m/s<sup>2</sup>  
Functional vibration resistance: 10 to 55 Hz (at double amplitude of 3.3 mm .130 inch)  
Destructive vibration resistance: 10 to 55 Hz (at double amplitude of 5 mm .197 inch)
- 7. Sealed construction allows automatic washing.**

**TYPICAL APPLICATIONS**

- 1. Telephone switchboard**
- 2. Telecommunications equipment**
- 3. Measurement equipment**
- 4. Consumer electronic and audio visual equipment**

## NOTES

### 1. Coil operating power

1) As a general rule, only a pure DC power supply should be used for the coil drive.

2) To ensure proper operation, the voltage applied to both terminals of the coil should be  $\pm 5\%$  (at 20°C 68°F) the rated operating voltage of the coil. Also, be aware that the pick-up and drop-out voltages will fluctuate depending on the ambient temperature and operating conditions.

3) The ripple factor for the voltage applied to the coil should be less than 5%.

4) For set and reset latching relays, the rated operating voltage should be applied to the coil for 10 ms or more.

### 2. Coil connection

When connecting coils, refer to the wiring diagram to prevent mis-operation or malfunction.

### 3. External magnetic field

Since GN relays are highly sensitive polarized relays, their characteristics will be affected by a strong external magnetic field. Avoid using the relay under that condition.

### 4. Cleaning

In automatic cleaning, cleaning with the boiling method is recommended. Avoid ultrasonic cleaning which subject the relay to high frequency vibrations. It may cause the contacts to stick.

It is recommended that a fluorinated hydrocarbon or other alcoholic solvent be used.

### 5. Packing style

1) The relay is packed in a tube with the relay orientation mark on the left side, as shown in the figure below.

### 2) Tape and reel packing

#### (A type)

#### (1)-1 Tape dimensions

#### (S type)

#### (1)-2 Tape dimensions

#### (2) Dimensions of plastic peel

Note: Dimensions of items produced after December 2006 have changed as shown below.  
 $100^{+1}$  dia.  $3.937^{+0.039}$  dia.  $\rightarrow$   $80^{+1}$  dia.  $3.150^{+0.039}$  dia.;  
 $370^{+2}$  dia.  $14.567^{+0.079}$  dia.  $\rightarrow$   $380^{+2}$  dia.  $14.961^{+0.079}$  dia.

### 6. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.

Chucking pressure in the direction A: 4.9 N {500gf} or less

Chucking pressure in the direction B: 9.8 N {1 kgf} or less

Chucking pressure in the direction C: 9.8 N {1 kgf} or less

Please chuck the  portion. Avoid chucking the center of the relay. In addition, excessive chucking pressure to the pinpoint of the relay should be avoided.
