

PIC Project Board 2

Farnell Order Code 120-054

PIC Project Board 2 has been designed for development with any of the 18 pin PIC's. It can form the basic hardware for both education and prototype development. The kit is supplied in a strong plastic case to protect the completed board. All the necessary components are included i.e. regulator, reset components, LED's, speaker, 4 MHz resonator etc.

A circuit diagram and construction notes are included together with a diskette giving some application examples which can be used with the board.

Project Board 2 has an additional prototyping block and connector for an external 9V supply.
