Features

- **Integral Current Limiting Resistor**
- **TTL Compatible**
Requires no External Current Limiter with 5 Volt/12 Volt Supply
- **Cost Effective**
Saves Space and Resistor Cost
- **Wide Viewing Angle**
- **Available in All Colors**
Red, High Efficiency Red, Yellow, and High Performance Green in T-1 and T-1³/₄ Packages

Package Dimensions

Description

The 5 volt and 12 volt series lamps contain an integral current limiting resistor in series with the LED. This allows the lamp to be driven from a 5 volt/12 volt source without an external current limiter. The red LEDs are made from GaAsP on a GaAs substrate. The High Efficiency Red and Yellow devices use GaAsP on a GaP substrate.

The green devices use GaP on a GaP substrate. The diffused lamps provide a wide off-axis viewing angle.

The T-1³/₄ lamps are provided with sturdy leads suitable for wire wrap applications. The T-1³/₄ lamps may be front panel mounted by using the HLMP-0103 clip and ring.

Notes:

4. The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
5. Radiant intensity, I_e , in watts/steradian, may be found from the equation $I_e = l_v \eta_V$, where l_v is the luminous intensity in candelas and η_V is the luminous efficacy in lumens/Watt.
