

MIC4467/4468/4469

Quad 1.2A Low-Side MOSFET Driver

Bipolar/CMOS/DMOS

General Description

The MIC4467/8/9 family of 4-output CMOS buffer/drivers is an expansion from the earlier single- and dual-output drivers, to which they are functionally closely related. Because package pin count permitted it, each driver has been equipped with a 2-input logic gate for added flexibility. Placing four high-power drivers in a single package also improves system reliability and reduces total system cost. In some applications, one of these drivers can replace not only two packages of single-input drivers, but some of the associated logic as well.

Although primarily intended for driving power MOSFETs, and similar highly capacitive loads, these drivers are equally well suited to driving any other load (capacitive, resistive, or inductive), which requires a high-efficiency, low-impedance driver capable of high peak currents, rail-to-rail voltage swings, and fast switching times. For example, heavily loaded clock lines, coaxial cables, and piezoelectric transducers can all be

Features

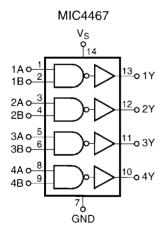

- Built using reliable, low power CMOS processes
- · Latchproof. Withstands 500mA Inductive Kickback
- 3 Input Logic Choices

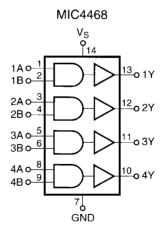

- Low Equivalent Input Capacitance (typ) 6pF
- Inputs = Logic 1 for Any Input From 2.4V to Vo
- ESD Protected

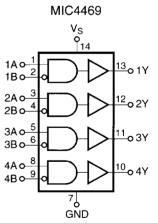

Applications

- General-Purpose CMOS Logic Buffer
- Driving All 4 MOSFETs in an H-Bridge
- · Direct Small-Motor Driver
- · Relay or Peripheral Drivers
- · Dual Differential Output Power Drivers
- CCD Driver
- Pin-Switching Network Driver

Logic Diagrams

driven easily with MIC446X series drivers. The only limitation on loading is that total power dissipation in the IC must be kept within the power dissipation limits of the package.

The MIC446X series drivers are built using a BCD process. They will not latch under any conditions within their power and voltage ratings. They are not subject to damage when up to 5V of noise spiking (either polarity) occurs on the ground line. They can accept up to half an amp of inductive kickback current (either polarity) into their outputs without damage or logic upset.

Ordering Information

Part No.	<u>Package</u>	Temp. Range
MIC44**CN	14-Pin Plastic DIP	0° to +70°C
MIC44**CWM	16-Pin Wide SOIC	0° to +70°C
MIC44**BN	14-Pin Plastic DIP	–40° to +85°C
MIC44**BWM	16-Pin Wide SOIC	-40° to +85°C
MIC44**BJ	14-Pin CerDIP	-40° to +85°C
MIC44**AJB*	14-Pin CerDIP	−55° to +125°C
MIC44**AL	20-Pin LCC	-55° to +125°C
MIC44**CY	Die	0° to +70°C

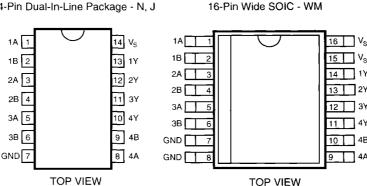

^{*} AJB indicates units screened to MIL-STD 883, Method 5004, condition B, and burned-in for 1-week.

Truth Table

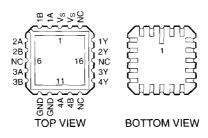

Part No.	Inp	uts B	Output Y	
MIC4467 (Each Driver)	L X H	X L H	ΙΙ	
MIC4468 (Each Driver)	H L X	H X L	H L L	
MIC4469 (Each Driver)	L X H	X H L	L L H	

Pin Configurations
