# **3.3 V Triple LVPECL Input to -3.3 V to -5.0 V ECL Output Translator**

### Description

The MC100LVEL91 is a triple LVPECL input to ECL output translator. The device receives low voltage differential PECL signals, determined by the  $V_{CC}$  supply level, and translates them to differential -3.3 V to -5.0 V ECL output signals.

To accomplish the level translation the LVEL91 requires three power rails. The  $V_{CC}$  supply should be connected to the positive supply, and the  $V_{EE}$  pin should be connected to the negative power supply. The GND pins are connected to the system ground plane. Both  $V_{EE}$  and  $V_{CC}$  should be bypassed to ground via 0.01 µF capacitors.

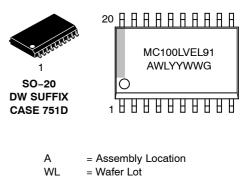

Under open input conditions, the  $\overline{D}$  input will be biased at V<sub>CC</sub>/2 and the D input will be pulled to GND. This condition will force the Q output to a low, ensuring stability.

The V<sub>BB</sub> pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V<sub>BB</sub> as a switching reference voltage. V<sub>BB</sub> may also rebias AC coupled inputs. When used, decouple V<sub>BB</sub> and V<sub>CC</sub> via a 0.01  $\mu$ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V<sub>BB</sub> should be left open.

### Features

- 620 ps Typical Propagation Delay
- The 100 Series Contains Temperature Compensation
- Operating Range: V<sub>CC</sub> = 3.8 V to 3.0 V;
  V<sub>EE</sub> = -3.0 V to -5.5 V; GND = 0 V
- Q Output will Default LOW with Inputs Open or at GND
- Pb-Free Packages are Available\*

\*For additional marking information, refer to Application Note AND8002/D.

#### **ORDERING INFORMATION**

See detailed ordering and shipping information in the package dimensions section on page 4 of this data sheet.

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

## Table 1. PIN DESCRIPTION

| Pin                  | Function                      |
|----------------------|-------------------------------|
| Dn, <u>Dn</u>        | PECL/LVPECL Inputs            |
| Qn, <u>Q</u> n       | ECL Outputs                   |
| PECL V <sub>BB</sub> | PECL Reference Voltage Output |
| V <sub>CC</sub>      | Positive Supply               |
| V <sub>EE</sub>      | Negative Supply               |
| GND                  | Ground                        |

Figure 1. SO-20 Pinout (Top View) and Logic Diagram

\* All  $V_{CC}$  pins are tied together on the die.

Warning: All  $V_{CC},\,V_{EE},$  and GND pins must be externally connected to Power Supply to guarantee proper operation.

## Table 4. LVPECL INPUT DC CHARACTERISTICS V<sub>CC</sub> = 3.3 V; V<sub>EE</sub> = -3.3 V to -5.0 V; GND = 0 V (Note 2)

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

2. Input parameters vary 1:1 with V<sub>CC</sub>. V<sub>CC</sub> can vary +0.5 / –0.3 V. 3. VIHCMR min varies 1:1 with GND. VIHCMR max varies 1:1 with VCC.

## Table 5. NECL OUTPUT DC CHARACTERISTICS V<sub>CC</sub> = 3.3 V; V<sub>EE</sub> = -3.3 V to -5.0 V; GND = 0 V (Note 4)

|                 |                                      | –40°C |       | 25°C  |       |       |       |       |       |       |      |

## Table 6. AC CHARACTERISTICS V<sub>CC</sub> = 3.3 V; V<sub>EE</sub> = -3.0 V to -5.5 V; GND = 0 V (Note 6)

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

6. V<sub>CC</sub> can vary +0.5 V / -0.3 V.

7. Skews are valid across specified voltage range, part-to-part skew is for a given temperature.

8. Duty cycle skew is the difference between a  $T_{PLH}$  and  $T_{PHL}$  propagation delay through a device. 9.  $V_{PP}(min)$  is the minimum input swing for which AC parameters are guaranteed. The device has a DC gain of  $\approx$  40.

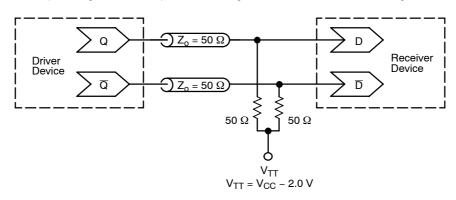

Figure 2. Typical Termination for Output Driver and Device Evaluation (See Application Note AND8020/D – Termination of ECL Logic Devices.)
